Please read this manual before using the machine.
Please keep this manual within easy reach for quick reference.

SINGLE NEEDLE DIRECT DRIVE LOCK STITCHER WITH ELECTRONIC FEEDING SYSTEM AND THREAD TRIMMER
Thank you very much for buying a BROTHER sewing machine. Before using your new machine, please read the safety instructions and the explanations given in the instruction manual.

With industrial sewing machines, it is normal to carry out work while positioned directly in front of moving parts such as the needle and thread take-up, and consequently there is always a danger of injury that can be caused by these parts. Follow the instructions from training personnel and instructors regarding safe and correct operation before operating the machine so that you will know how to use it correctly.
SAFETY INSTRUCTIONS

[1] Safety indications and their meanings
This instruction manual and the indications and symbols that are used on the machine itself are provided in order to ensure safe operation of this machine and to prevent accidents and injury to yourself or other people. The meanings of these indications and symbols are given below.

Indications

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>⚠️ DANGER</td>
<td>The instructions which follow this term indicate situations where failure to follow the instructions will result in death or serious injury.</td>
</tr>
<tr>
<td>⚠️ WARNING</td>
<td>The instructions which follow this term indicate situations where failure to follow the instructions could result in death or serious injury.</td>
</tr>
<tr>
<td>⚠️ CAUTION</td>
<td>The instructions which follow this term indicate situations where failure to follow the instructions may result in minor or moderate injury.</td>
</tr>
</tbody>
</table>

Symbols

- This symbol (⚠️) indicates something that you should be careful of. The picture inside the triangle indicates the nature of the caution that must be taken. (For example, the symbol at left means “beware of injury”.)
- This symbol (🚫) indicates something that you must not do.
- This symbol (✅) indicates something that you must do. The picture inside the circle indicates the nature of the thing that must be done. (For example, the symbol at left means “you must make the ground connection”.)
[2] Notes on safety

⚠️ DANGER

Wait at least 5 minutes after turning off the power switch and disconnecting the power cord from the wall outlet before opening the cover of the control box. Touching areas where high voltages are present can result in severe injury.

⚠️ WARNING

Do not allow any liquids to get onto this sewing machine, otherwise fire, electric shocks or operating problems may occur.

If any liquid gets inside the sewing machine (machine head or control box), immediately turn off the power and disconnect the power plug from the electrical outlet, and then contact the place of purchase or a qualified technician.

⚠️ CAUTION

Environmental requirements

Use the sewing machine in an area which is free from sources of strong electrical noise such as electrical line noise or static electric noise. Sources of strong electrical noise may cause problems with correct operation.

Any fluctuations in the power supply voltage should be within ±10% of the rated voltage for the machine. Voltage fluctuations which are greater than this may cause problems with correct operation.

The power supply capacity should be greater than the requirements for the sewing machine's power consumption. Insufficient power supply capacity may cause problems with correct operation.

The ambient temperature should be within the range of 5°C to 35°C during use. Temperatures which are lower or higher than this may cause problems with correct operation.

The relative humidity should be within the range of 45% to 85% during use, and dew formation should occur in any devices. Excessively dry or humid environments and dew formation may cause problems with correct operation.

In the event of an electrical storm, turn off the power and disconnect the power cord from the wall outlet. Lightning may cause problems with correct operation.

Do not connect anything to the USB port other than the USB media. If this is not observed, problems with operation may result.

Installation

Machine installation should only be carried out by a qualified technician.

Contact your Brother dealer or a qualified electrician for any electrical work that may need to be done.

The sewing machine weighs approximately 35 kg (77lb). The installation should be carried out by two or more people.

Do not connect the power cord until installation is complete. The machine may operate if the treadle is depressed by mistake, which could result in injury.

Turn off the power switch before inserting or removing the plug, otherwise damage to the control box could result.

Be sure to connect the ground. If the ground connection is not secure, you run a high risk of receiving a serious electric shock, and problems with correct operation may also occur.

When securing the cords, do not bend the cords excessively or fasten them too hard with staples, otherwise there is the danger that fire or electric shocks could occur.

If using a work table which has casters, the casters should be secured in such a way so that they cannot move.

Secure the table so that it will not move when tilting back the machine head. If the table moves, it may crush your feet or cause other injuries.

Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.

Be sure to wear protective goggles and gloves when handling the lubricating oil and grease, so that they do not get into your eyes or onto your skin, otherwise inflammation can result. Furthermore, do not drink the oil or eat the grease under any circumstances, as they can cause vomiting and diarrhea.

Keep the oil out of the reach of children.
### Sewing

- This sewing machine should only be used by operators who have received the necessary training in safe use beforehand.
- The sewing machine should not be used for any applications other than sewing.
- Be sure to wear protective goggles when using the machine.
- If goggles are not worn, there is the danger that if a needle breaks, parts of the broken needle may enter your eyes and injury may result.
- Turn off the power switch at the following times:
  - The machine may operate if the treadle is depressed by mistake, which could result in injury.
  - When threading the needle
  - When replacing the bobbin and needle
  - When not using the machine and when leaving the machine unattended
- If using a work table which has casters, the casters should be secured in such a way so that they cannot move.
- Attach all safety devices before using the sewing machine. If the machine is used without these devices attached, injury may result.
- Do not touch any of the moving parts or press any objects against the machine while sewing, as this may result in personal injury or damage to the machine.
- Secure the table so that it will not move when tilting back the machine head. If the table moves, it may crush your feet or cause other injuries.
- Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.
- If an error occurs in machine operation, or if abnormal noises or smells are noticed, immediately turn off the power switch. Then contact your nearest Brother dealer or a qualified technician.
- If the machine develops a problem, contact your nearest Brother dealer or a qualified technician.

### Cleaning

- Turn off the power switch before carrying out cleaning. The machine may operate if the treadle is depressed by mistake, which could result in injury.
- Secure the table so that it will not move when tilting back the machine head. If the table moves, it may crush your feet or cause other injuries.
- Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.
- Be sure to wear protective goggles and gloves when handling the lubricating oil and grease, so that they do not get into your eyes or onto your skin, otherwise inflammation can result.
- Furthermore, do not drink the oil or eat the grease under any circumstances, as they can cause vomiting and diarrhea.
- Keep the oil out of the reach of children.

### Maintenance and inspection

- Maintenance and inspection of the sewing machine should only be carried out by a qualified technician.
- Ask your Brother dealer or a qualified electrician to carry out any maintenance and inspection of the electrical system.
- Turn off the power switch and disconnect the power cord from the wall outlet at the following times, otherwise the machine may operate if the treadle is depressed by mistake, which could result in injury.
  - When carrying out inspection, adjustment and maintenance
  - When replacing consumable parts such as the rotary hook and knife
- Always be sure to turn off the power switch and then wait one minute before opening the pulley cover. If you touch the surface of the motor, it may cause burns.
- If the power switch needs to be left on when carrying out some adjustment, make sure that you switch the sewing machine to maintenance mode. Pay careful attention to safety.
- Secure the table so that it will not move when tilting back the machine head. If the table moves, it may crush your feet or cause other injuries.
- Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.
- When replacing parts and installing optional accessories, be sure to use only genuine Brother parts.
- Brother will not be held responsible for any accidents or problems resulting from the use of non-genuine parts.
- If any safety devices have been removed, be absolutely sure to re-install them to their original positions and check that they operate correctly before using the machine.
- To prevent accidents and problems, do not modify the machine yourself.
- Brother will not be held responsible for any accidents or problems resulting from modifications made to the machine.
The following warning labels appear on the sewing machine.
Please follow the instructions on the labels at all times when using the machine. If the labels have been removed or are difficult to read, please contact your nearest Brother dealer.

1. **Warning labels**

<table>
<thead>
<tr>
<th>Label</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>!DANGER</td>
<td>High voltage present. Turn off the power before opening the cover.</td>
</tr>
</tbody>
</table>

2. **Touching areas**

Touching areas where high voltages are present can result in severe injury. Turn off the power before opening the cover.

3. **Moving parts**

Moving parts may cause injury. Operate with safety devices installed.

4. **High temperature**

Be careful not to get your hands caught when returning the machine head to its original position after it has been tilted.

5. **Avoid injury**

Be careful to avoid injury from the moving thread take-up.

6. **High temperature warning**

High temperature warning display.

7. **Ground connection**

Be sure to connect the ground. If the ground connection is not secure, you run a high risk of receiving a serious electric shock, and problems with correct operation may also occur.

8. **Direction of operation**

Direction of operation.

9. **Safety devices**

Safety devices:
- (A) Finger guard
- (B) Thread take-up cover
- (C) Motor cover
- (D) Pulse motor cover

10. **Do not hold**

Do not hold. Problems with operation or injury may occur.

11. **Do not place hands**

Do not place your hands inside the bottom cover. Problems with operation or injury may occur.

* Safety devices:
  - (A) Finger guard
  - (B) Thread take-up cover
  - (C) Motor cover
  - (D) Pulse motor cover

---

**Lubricating Oil for Machining**

**CAUTION**

- Lubricating oil may cause inflammation to eye and skin.
- Wear protective glasses and gloves.
- Swallowing oil can cause diarrhoea and vomiting.
- Do not swallow.

Keep away from children.

**FIRST AID**

- Eye contact: Rinse with plenty of cold water.
- Seek medical help.
- Skin contact: Wash with soap and water.
- If swallowed: Seek medical help immediately. Do not induce vomiting.

2. INSTALLATION

**CAUTION**

Machine installation should only be carried out by a qualified technician.

Contact your Brother dealer or a qualified electrician for any electrical work that may need to be done.

The sewing machine weighs approximately 35 kg (77lb). The installation should be carried out by two or more people.

Do not connect the power cord until installation is complete.

The machine may operate if the treadle is depressed by mistake, which could result in injury.

Secure the table so that it will not move when tilting back the machine head. If the table moves, it may crush your feet or cause other injuries.

Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.

### About the machine set-up location

- Do not set up this sewing machine near other equipment such as televisions, radios or cordless telephones, otherwise such equipment may be affected by electronic interference from the sewing machine.

- The sewing machine should be plugged directly into an AC wall outlet. Operation problems may result if extension cords are used.

### Carrying the machine

- The sewing machine should be carried by the arm and the motor cover by two people as shown in the illustration.

  * Do not hold by any part other than the motor cover. If this is not observed, it may result in damage to the sewing machine.

### Tilting back the machine head

- Hold section (A) with your foot so that the table does not move, and then push the arm with both hands to tilt back the machine head.

### Returning the machine head to the upright position

1. Clear away any tools, etc. which may be near the table holes.
2. While holding the face plate with your left hand, gently return the machine head to the upright position with your right hand.
2-1. Table processing diagram

- The top of the table should be 40 mm in thickness and should be strong enough to hold the weight and withstand the vibration of the sewing machine.
- Drill holes as indicated in the illustration below.

2-2. Installation

1. Control box + Oil pan
   (1) Control box
   (2) Bolts [4 pcs]
   (3) Nuts [4 pcs]
   (4) Spring washers [4 pcs]
   (5) Washers [4 pcs]

2. Connecting rod
   (6) Connecting rod
   (7) Nut
2. INSTALLATION

3. Rubber cushions
   (1) Rubber cushions [2 pcs]

4. Machine head
   (1) Hinges [2 pcs]
   (2) Machine head
   (3) Head rest

NOTE:
- Bind the cords together and pass them through the cord hole.
- Tap the head rest (3) securely into the table hole.
- If the head rest (3) is not pushed in as far as it will go, the machine head will not be sufficiently stable when it is tilted back.
2. INSTALLATION

5. Knee lifter plate

<Knee lifter adjustment>
1. Turn the machine pulley so that the feed dog is below the top of the needle plate.
2. Lower the presser foot (1) by using the lifting lever (2).
3. Loosen the nut (3).
4. Turn the screw (5) to adjust so that the amount of play in the knee lifter plate (4) is approximately 10 mm.
5. After adjustment is completed, securely tighten the nut (3).
6. Loosen the nut (6).
7. Turn the adjusting screw (8) to adjust so that the presser foot (7) is at the desired position within a distance of 13 mm from the needle plate when the knee lifter plate is fully pressed.
8. After adjustment is completed, securely tighten the nut (6).
2-3. Lubrication

**CAUTION**

- Do not connect the power cord until lubrication has been completed, otherwise the machine may operate if the treadle is depressed by mistake, which could result in injury.
- Be sure to wear protective goggles and gloves when handling the lubricating oil, so that it does not get into your eyes or onto your skin. If care is not taken, inflammation can result. Furthermore, do not drink the lubricating oil. Diarrhea or vomiting may result. Keep the oil out of the reach of children.
- When cutting the nozzle of the oil tank, hold the base of the nozzle securely. If you hold the end of the nozzle, injury from the scissors may result.

The sewing machine should always be lubricated and the oil supply replenished before it is used for the first time, and also after long periods of non-use.

1. Hold the base of the nozzle of the accessory oil tank (1), and use scissors to cut about half-way along the straight section (A) of the nozzle.
2. Loosen and remove the nozzle, and then remove the seal (2).
3. Tighten the nozzle.
4. Tilt back the machine head.
5. Remove the rubber cap (3), and pour lubricating oil into the oil cover (4) until it reaches the upper reference line (5).
6. Replace the rubber cap (3).
7. Return the machine head to its original position.

**NOTE:**

When the machine head is tilted back at times such as the following, lubricating oil may leak out from the oil cover (4).

1) If lubricating oil is added until the oil level goes above the upper reference line (5) on the oil cover (4).

**<Lubrication oil replenishment interval>**

If the oil level drops below the lower reference line (6) on the oil cover (4), be sure to replenish the oil.
2. INSTALLATION

2-4. Connecting the cords

**CAUTION**

Contact your Brother dealer or a qualified electrician for any electrical work that may need to be done.

Do not connect the power cord until all cords have been connected.

The machine may operate if the treadle is depressed by mistake, which could result in injury.

When securing the cords, do not bend the cords excessively or fasten them too hard with staples, otherwise there is the danger that fire or electric shocks could occur.

Be sure to connect the ground. If the ground connection is not secure, you run a high risk of receiving a serious electric shock, and problems with correct operation may also occur.

2-4-1. Connecting the cords

1. Cords (1)
   1. Solenoid connector 14-pin
   2. Sewing machine motor encoder connector 10-pin
   3. Feed motor encoder connector 6-pin
   4. Operation panel connector 5-pin
   5. Power connector 3-pin
   1. Secure the cords to the control box with the black band (6).

   **NOTE:**
   For Europe specifications, Americas 220 V specifications and 100 V/400 V system specifications, refer to “2-4-2. Other cords”.

2. Ground wire
   1. Ground wire
   2. Screw
   3. Power cord
   1. Attach an appropriate plug to the power cord (3).
   (The green and yellow wire is the ground wire.)
   2. Insert the power plug into a properly-grounded electrical outlet.

   **NOTE:**
   - Make sure that the ground connections are secure in order to ensure safety.
   - For Europe specifications, Americas 220 V specifications and 100 V/400 V system specifications, refer to “2-4-2. Other cords”.

   Green and yellow wire (ground wire)
3. Cords (2)
(1) Machine motor connector 4-pin
(2) Feed motor connector 6-pin

Lower the tab (3).

Push in securely until the tabs (3) engage.
2. INSTALLATION

2-4-2. Other cords

**DANGER**

Wait at least 5 minutes after turning off the power switch and disconnecting the power cord from the wall outlet before opening the cover of the control box. Touching areas where high voltages are present can result in severe injury.

For Europe specifications, Americas 220 V specifications and 100 V/400 V system specifications, connect the cords according to the respective specifications.

<Europe specifications>
1. Attach an appropriate plug to the power cord (9). (The green and yellow wire is the ground wire.)
2. Insert the power plug into a properly-grounded electrical outlet.

**NOTE:**
- Take care when tapping in the staples (8) to make sure that they do not pierce the cords.
- Do not use extension cords, otherwise machine operation problems may result.
For Europe specifications, Americas 220 V specifications and 100 V/400 V system specifications, connect the cords according to the respective specifications.

<For 100 V/400 V system specifications>
(1) Power switch
(2) Screws [2 pcs]
2. INSTALLATION

1. Attach an appropriate plug to the power cord (10).
   (The green and yellow wire is the ground wire.)

2. Insert the power plug into a properly-grounded electrical outlet.

NOTE:
- Take care when tapping in the staples (7) to make sure that they do not pierce the cords.
- Do not use extension cords, otherwise machine operation problems may result.
<For Americas 220 V specifications>

1. Attach an appropriate plug to the power cord (4). (The green and yellow wire is the ground wire.)
2. Insert the power plug into a properly-grounded electrical outlet.

**NOTE:**
- Take care when tapping in the staples (5) to make sure that they do not pierce the cords.
- Do not use extension cords, otherwise machine operation problems may result.
3. USING THE OPERATION PANEL (BASIC OPERATIONS)

3-1. Names and functions

- The operation panel keys cannot be operated while sewing is in progress. Select the keys and set the number of stitches before starting sewing.
- In the case of keys with indicators, the indicator illuminates when that function is operating, and the indicator switches off when the key is pressed once more.

![Diagram of Operation Panel Keys and Displays]

- The power indicator illuminates when the power switch is turned on.

1. **3-digit display**
   - Displays the sewing pitch.

2. **Pitch setting keys**
   - Use these keys to set the sewing pitch.
   - When the `-` key is pressed, the setting decreases in steps of 0.05 within a range of 0.05 to 5.00.
   - When the `+` key is pressed, the setting increases in steps of 0.05 within a range of 0.05 to 5.00.

3. **4-digit display**
   - When start backtack stitches are being displayed, the indicator of the start backtack key (6) will illuminate, and the number of A stitches will appear in the A column and the number of B stitches will appear in the B column.
   - When end backtack stitches are being displayed, the indicator of the end backtack key (7) will illuminate, and the number of C stitches will appear in the C column and the number of D stitches will appear in the D column.
   - When continuous backtack stitches are displayed, the indicator of the continuous backtack key (8) will illuminate, and the number of A, B, C and D stitches will appear in order starting from the left column of the display.
   - The five indicators on the right side of the window show which value is appearing in the 4-digit display. The 4-digit display shows the number of stitches, speed, counter, locus and program. When the number of stitches is being displayed, the ABCD indicator (Stitch No. indicator) will illuminate.

4. **SEL (Select) key**
   - The value in the 4-digit display (3) can be changed each time this key is pressed.

5. **Setting keys**
   - These keys are used to set the number of backtack stitches for A, B, C and D.
   - When the `Δ` key is pressed, the setting increases from 0 up to 9.
   - If you press the `Δ` key once more when “9” is displayed, the value will return to “0”.
   - If you hold down the `Δ` key, the value will change continuously.
3. USING THE OPERATION PANEL (BASIC OPERATIONS)

(6) Start backtack key
When this key is pressed so that the indicator illuminates, the number of start backtack stitches (0 - 9) in the A and B columns of the display are sewn.

(7) End backtack key
When this key is pressed so that the indicator illuminates, the number of end backtack stitches (0 to 9) in the C and D columns of the display are sewn. When the treadle is depressed backward, the end backtack stitches are sewn and then the thread is trimmed. If the treadle has not yet been depressed backward, the end backtack function can be set to ON, the number of stitches can be changed and the function can be set back to OFF.

(8) Continuous backtack key
When this key is pressed so that the indicator illuminates, the number of backtack stitches (0 to 9) in the A, B, C and D columns of the display are sewn continuously. After the sewing machine sews a full cycle of stitches set by A, B, C and D, the thread is trimmed.

(9) Thread trimming disable/F1 key
When this key is pressed so that the indicator illuminates, the sewing machine stops in the needle up position without thread trimming being carried out even if the treadle is depressed backward.

(10) Slow start/F2 key
When this key is pressed so that the indicator illuminates, sewing is carried out at 700 sti/min for the first two stitches at the next sewing start after thread trimming. After this, the sewing speed corresponds to the treadle depression amount.

(11) Half stitch key
When the sewing machine is stopped, the needle bar can be moved up and down by pressing this key.
### 3-2. Sewing start and end backtack stitches

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1</strong></td>
<td><strong>Setting start backtack stitches</strong>&lt;br&gt;Press the key so that the indicator and the key illuminate.&lt;br&gt;Press the key to set the number of stitches for A and B.&lt;br&gt;For example, to select 3 stitches and 4 stitches: A-3, B-4</td>
</tr>
<tr>
<td><strong>2</strong></td>
<td><strong>Setting end backtack stitches</strong>&lt;br&gt;Press the key so that the indicator and the key illuminate.&lt;br&gt;Press the key to set the number of stitches for C and D.&lt;br&gt;For example, to select 3 stitches and 2 stitches: C-3, D-2</td>
</tr>
<tr>
<td><strong>3</strong></td>
<td><strong>Start backtacking is carried out. After it has finished, normal sewing continues for as long as the treadle remains depressed.</strong>&lt;br&gt;&lt;strong&gt;NOTE:&lt;/strong&gt; If the treadle is returned to the neutral position, the sewing machine will continue operating until the set number of start backtack stitches has been sewn.</td>
</tr>
</tbody>
</table>
| **4** | **End backtacking is carried out. After it has finished, the thread is trimmed automatically and the sewing machine stops in the needle up position.**<br><strong>NOTE:</strong>  
  - If the treadle is depressed backward before sewing of the set number of start backtack stitches is complete, end backtacking will not be carried out.<br>  - If thread trimming lock is set, the sewing machine will stop in the needle up position without thread trimming being carried out. |
3-3. Sewing continuous backtack stitches

1. Press the key so that the indicator and the key illuminate.

2. Press the key to set the number of stitches for A, B, C and D.

For example, to select 4 stitches for A and 5 stitches for B: A-4, B-5
To select 5 stitches for C and 4 stitches for D: C-5, D-4

2. If the treadle is simply depressed continuously, the number of stitches set for A, B, C and D will be sewn in a single cycle, the thread will be trimmed automatically and then the needle bar will stop in the needle up position.

NOTE:
- If the treadle is returned to the neutral position while continuous backtacking is being carried out, the sewing machine will stop at the point where the treadle returns to the neutral position. If the treadle is depressed again, operation will resume from the point where it was interrupted.
- If thread trimming lock is set, the sewing machine will stop in the needle up position without thread trimming being carried out.

3. If "-" is set as the number of stitches for C, the number of stitches set by AB can be sewn D times.
   For example, if D=3: ABA
   If D=6: ABABAB
4. USING THE OPERATION PANEL (ADVANCED OPERATIONS)

The operations described in this section should only be carried out by a technician.

4-1. Sewing pitch setting method

1. Press the \[ \text{key} \] so that any one of the \[ \text{indicator} \] illuminates.
   - The sewing pitch can be set regardless of whether the stitch no., speed, counter, locus or program is being displayed in the 4-digit display. (Refer to the Service Manual for details on programs.)

2. Press the \[ \text{key} \] to change the setting value.
   - When the + key is pressed, the setting value increases by 0.05.
   - When the - key is pressed, the setting value decreases by 0.05.

**NOTE:**
- The setting range is from 0.05 to 5.00.

3. The backtack sewing pitch can only be set when the \[ \text{indicators} \] are illuminated simultaneously. (Refer to “4-3-2. Backtack sewing speed setting method”.)

---

Memory switch No. 407 (MSW407 (Synchronized/not synchronized to pitch) has been added from software version 2.0.00. When MSW407 is “ON”, the backtack sewing pitches are synchronized with the main sewing pitch so that the pitch settings are the same.

The main sewing pitch and the backtack sewing pitches can only be set separately when this is set to “OFF”.

S-7250A 17
4-2. Switching the 4-digit display

- The 4-digit display can be changed to one of the following five statuses*1 each time the key is pressed.
  Stitch no. display or no display -> Speed display -> Counter display -> Locus display -> (Program display)
  *1: The display switches to program display only when memory switch No. 470 is set to “1”.
  (Refer to the Service Manual for details on changing memory switch No. 470.)

- When the speed display or counter display appears, you can press the key to switch to another display.

| Display mode       | ABCD | | | | | 4-digit display |
|--------------------|-----|---|---|---|----------------|
| Stitch number display | ON | | | | ABCD stitch number display |
| Sewing speed display | ON | | | | Maximum sewing speed setting value |
| Counter display     | ON | Flashing | ON | ON | Production counter value |
| Locus display       | ON | Flashing | ON | ON | Locus setting value |
| Program display     | ON | | | | Program number or setting parameters |

4-3. Setting the sewing speed

4-3-1. Setting the maximum sewing speed

1 Press the key so that the indicator illuminates.

- The maximum sewing speed setting value will appear in the 4-digit display.

2 Press the keys to change the setting value.

- When the key is pressed, the setting increases by 100.
- When the key is pressed, the setting decreases by 100.

NOTE: The setting range is from 220 to 4000 sti/min.
4. USING THE OPERATION PANEL (ADVANCED OPERATIONS)

4-3-2. Backtack sewing speed setting method

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
</table>
| 1    | Press the \( \text{key} \) so that the \( \text{indicator} \) illuminates.  
- The maximum sewing speed setting value will appear in the 4-digit display. |
| 2    | Press the \( \text{key} \).  
- The \( \text{indicator} \) will illuminate and the setting value for the backtack sewing speed will appear in the 4-digit display.  
**NOTE:** If you press the \( \text{key} \) once more, the \( \text{indicator} \) will switch off and the display will return to the maximum sewing speed setting value. |
| 3    | Press the \( \text{keys} \) to change the setting value.  
- When the \( \text{key} \) is pressed, the setting increases by 100.  
- When the \( \text{key} \) is pressed, the setting decreases by 100.  
**NOTE:** The setting range is from 220 to 3000 sti/min. |
4-4. Setting the counters
The lower thread counter, production counter and needle replacement counter are available. The three counters can be operated at the same time.

4-4-1. Lower thread counter
The lower thread counter can be used to let you know approximately how much lower thread is remaining. * This function is only displayed when "A09: Lower thread counter operation" is set to "ON". Refer to "4-6-7. Setting lower thread counter operation".

<Setting the lower thread counter initial value>

1. Press the key so that the indicator illuminates.
   • The lower thread counter value will appear in the 4-digit display.

2. Press the \( \text{D} \) key for 2 seconds or more, and then press the \( \text{C} \) or \( \text{D} \) key to set the initial value.
   • When the \( \text{D} \) key is pressed, the setting value increases by 0.1.
   • When the \( \text{C} \) key is pressed, the setting value decreases by 0.1.

**NOTE:**
• The setting range is from 0.1 to 99.9.

<Lower thread counter operation>
• The lower thread counter can be used to let you know approximately how much lower thread is remaining.
  • The lower thread counter should be used as a guide only.
  • The value displayed by the lower thread counter display is reduced by 0.1 from the initial setting value each time the number of stitches x sewing pitch reaches 0.1 m, and a warning is given when the counter goes below 0.

• Sewing will be possible even after the treadle is returned to the neutral position and the sewing machine stops. However, after the treadle has been depressed backward and thread trimming has been carried out, sewing using the treadle will no longer be possible. If the treadle is depressed at this time, "Ent" will appear in the display. When the treadle is returned to the neutral position, the display will return to the current counter display.

• If the key is pressed during a warning, the \( \text{D} \) indicator will change to illuminated and sewing can then be carried out using the treadle.
  • If the \( \text{A} \) key is pressed again for 2 seconds or more, the counter display will return to the initial value and counting from the initial value will be possible.
# 4-4-2. Production counter

The production counter can be used to let you know how many items have been sewn.

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
</table>
| 1    | **Press the \( \text{key} \) so that the \( \text{indicator} \) illuminates.**  
  • The lower thread counter value will appear in the 4-digit display. |
| 2    | **When the \( \text{key} \) is pressed once, the production counter will be displayed.**  
  • The production counter value will appear in the 4-digit display. |
| 3    | After the thread trimming operation is complete, the counter will be incremented.  
  **NOTE:**  
The counter is incremented when the treadle is depressed backward even if thread trimming is set to disabled. |
| 4    | **When the production counter is displayed, you can press the \( \text{key} \) or \( \text{key} \) key to adjust the counter value (0 to 9999).**  
  • When the \( \text{key} \) key is pressed, the counter value increases by 1.  
  • When the \( \text{key} \) key is pressed, the counter value decreases by 1.  
  • If you press the \( \text{key} \) for 2 seconds or more, the counter value can be reset to "0". |
### 4-4-3. Needle replacement counter

#### <Setting the needle replacement counter initial value>

1. Press the \( \downarrow \) key so that the \( \text{ABCD} \) indicator illuminates.
   - The lower thread counter value will appear in the 4-digit display.

2. When the \( \square \) key is pressed two or more times, the needle replacement counter display will appear.
   - The needle replacement counter value will appear in the 4-digit display.

3. Press the A \( \triangleup \) key for 2 seconds or more, and then press the C \( \triangleup \) or D \( \triangleup \) key to set the initial value.
   - When the D \( \triangleup \) key is pressed, the setting value increases by 1.
   - When the C \( \triangleup \) key is pressed, the setting value decreases by 1.

**NOTE:**
- The setting range is from 0 to 9999.
- If an initial value of “0” is set, the needle replacement counter will not operate.

#### <Needle replacement counter operation>

- The needle replacement counter is reduced by 1 from the initial setting value each time the sewing machine sews 100 stitches, and a warning is given when the counter goes below “0”.

- Sewing will be possible even after the treadle is returned to the neutral position and the sewing machine stops. However, after the treadle has been depressed backward and thread trimming has been carried out, sewing using the treadle will no longer be possible.
- If the treadle is depressed at this time, “Ent” will appear in the display. When the treadle is returned to the neutral position, the display will return to the current counter display.
- If the \( \downarrow \) key is pressed during a warning, the \( \text{ABCD} \) indicator and the \( \text{ABCD} \) indicator will change to illuminated and sewing can then be carried out using the treadle.
- If the A \( \triangleup \) key is pressed again for 2 seconds or more, the counter display will return to the initial value and counting from the initial value will be possible.
4-5. Sewing locus setting method

Sewing locus setting method

1. Press the key so that the indicator illuminates.
   - The sewing locus setting value will appear in the 4-digit display.

2. Press the C/D keys to change the setting value.
   - When the D key is pressed, the setting value increases by 1.
   - When the C key is pressed, the setting value decreases by 1.

NOTE:
The setting range is from 0 to 3.
0: The feed dog moves along the standard locus.
1: The feed dog moves along special locus 1.
2: The feed dog moves along special locus 2.
3: The feed dog moves along special locus 3.
### 4-6. Setting basic functions

If you hold down the [стрелка влево] key and press the [стрелка вправо] key while the stitch no., speed, counter, locus or program is displayed, the following items can be set.

</tbody>
</table>
4-6-1. Changing the needle stop position

This sets whether the needle bar stops in the needle up stop position or the needle down stop position when the treadle is returned to the neutral position and sewing stops.

1. In sewing standby mode, press the \[\text{key}\] while holding down the \[\text{key}\] to switch to function setting mode.
   - "A01 UPdn" will be displayed.

2. Displaying the needle up stop and needle down stop setting values
   - When the \[\text{key}\] is pressed, the setting value is displayed.

3. Setting the needle up stop and needle down stop positions
   - When the \[\text{key}\] is pressed, the “UP” display will appear.
   - When the \[\text{key}\] is pressed, the “dn” display will appear.
   - When the \[\text{key}\] is pressed, the initial value will be reset.
   
   **NOTE:**
   If the \[\text{key}\] is pressed once more, the \[\text{indicator}\] will switch off and the display will return to the setting item.

4. Press the \[\text{key}\].
   
   Setting mode will be exited and normal operation will be possible.
4-6-2. Thread trimming disable

If thread trimming is set to be disabled, thread trimming will not be carried out even when the pedal is depressed backward.

1. In sewing standby mode, press the key while holding down the key to switch to function setting mode.
   ・ "A01 UPdn" will be displayed.

2. Selecting "A02 Trdi" (thread trimming disable)
   Press the keys to select "A02 Trdi".
   ・ When the key is pressed, the next setting is displayed.
   ・ When the key is pressed, the previous setting is displayed.

3. Displaying the thread trimming disabled setting value
   ・ When the key is pressed, the setting value is displayed.

4. Setting thread trimming to disabled or enabled
   ・ When the key is pressed, the "on" display will appear.
   ・ When the key is pressed, the "off" display will appear.
   ・ When the key is pressed, the initial value will be reset.

   NOTE:
   If the key is pressed once more, the indicator will switch off and the display will return to the setting item.

5. Press the key.
   Setting mode will be exited and normal operation will be possible.
4-6-3. Thread wiping

You can set whether thread wiper operation is enabled or disabled.

1. In sewing standby mode, press the key while holding down the key to switch to function setting mode.
   * "A01 UPdn" will be displayed.

   ![](Image)

2. Press the keys to select "A03 Wip".
   * When the key is pressed, the next setting is displayed.
   * When the key is pressed, the previous setting is displayed.

   ![](Image)

3. When the key is pressed, the setting value is displayed.

   ![](Image)

4. When the key is pressed, the “on” display will appear.
   * When the key is pressed, the “off” display will appear.
   * When the key is pressed, the initial value will be reset.

   NOTE:
   If the key is pressed once more, the indicator will switch off and the display will return to the setting item.

   ![](Image)

5. Press the key.
   Setting mode will be exited and normal operation will be possible.

   ![](Image)
### 4-6-4. Correction sewing

When correction sewing is enabled, if the hand switch is pressed while sewing is stopped before thread trimming, one stitch will be sewn and sewing will then stop.

* The function can be changed. (Refer to "4-12. Hand switch".)

<table>
<thead>
<tr>

<th>Description</th>
</tr>
</thead>
</table>
| **1** | In sewing standby mode, press the \( \text{[key]} \) key while holding down the \( \text{[key]} \) key to switch to function setting mode.  
  - "A01 UPdn" will be displayed. |
| **2** | Selecting “A04 Corr” (correction sewing)  
  - Press the - or + key to select "A04 Corr".  
  - When the + key is pressed, the next setting is displayed.  
  - When the - key is pressed, the previous setting is displayed. |
| **3** | Displaying the correction sewing setting value  
  - When the \( \text{[key]} \) key is pressed, the setting value is displayed. |
| **4** | Setting correction sewing  
  - When the \( \text{[key]} \) key is pressed, the “on” display will appear.  
  - When the \( \text{[key]} \) key is pressed, the “off” display will appear.  
  - When the \( \text{[key]} \) key is pressed, the initial value will be reset.  
  **NOTE:**  
  If the \( \text{[key]} \) key is pressed once more, the \( \text{[key]} \) indicator will switch off and the display will return to the setting item. |
| **5** | Press the \( \text{[key]} \) key. Setting mode will be exited and normal operation will be possible. |
4-6-5. Slow start
If slow start is enabled, occurrences of the thread pulling out can be reduced.

1. In sewing standby mode, press the key while holding down the key to switch to function setting mode.
   - "A01 UPdn" will be displayed.

2. Press the or key to select "A07 SLow".
   - When the key is pressed, the next setting is displayed.
   - When the key is pressed, the previous setting is displayed.

3. When the key is pressed, the setting value is displayed.

4. When the key is pressed, the setting value increases in the order "off", "1", "2", "3", "4".
   - When the key is pressed, the setting value decreases in the order "4", "3", "2", "1", "off".
   - When the key is pressed, the initial value will be reset.
   - Sewing speed for first 4 stitches when slow start is enabled
     1: 400, 400, 400, 4000*
     2: 400, 400, 4000*, 4000*
     3: 700, 700, 4000*, 4000*
     4: Set using memory switch Nos. 403 to 406.
   * If the maximum sewing speed is set to 4,000 sti/min

   NOTE: If the key is pressed once more, the indicator will switch off and the display will return to the setting item.

5. Press the key.
   Setting mode will be exited and normal operation will be possible.
4-6-6. Setting the illumination LED light
You can set the brightness of the illumination LED light.

1. In sewing standby mode, press the key while holding down the key to switch to function setting mode.
   - "A01 UPdn" will be displayed.

2. Selecting "A08 LED" (illumination LED light)
   Press the - or + key to select "A08 LED".
   - When the + key is pressed, the next setting is displayed.
   - When the - key is pressed, the previous setting is displayed.

3. Displaying the illumination LED light setting value
   - When the key is pressed, the setting value is displayed.

4. Setting the illumination LED light
   - When the D key is pressed, the setting value increases from "1" through to "9".
   - When the C key is pressed, the setting value decreases from "9" through to "1".
   - When the key is pressed, the initial value will be reset.

   **NOTE:**
   If the key is pressed once more, the indicator will switch off and the display will return to the setting item.

5. Press the key.
   Setting mode will be exited and normal operation will be possible.
## 4. USING THE OPERATION PANEL (ADVANCED OPERATIONS)

### 4-6-7. Setting lower thread counter operation

The lower thread counter function can be set to enabled or disabled.

| 1 | In sewing standby mode, press the key while holding down the key to switch to function setting mode.  
|   | - “A01 UPdn” will be displayed. |

| 2 | Selecting "A09 UtCt" (lower thread counter operation)  
|   | Press the - or + key to select "A09 UtCt".  
|   | ・When the + key is pressed, the next setting is displayed.  
|   | ・When the - key is pressed, the previous setting is displayed. |

| 3 | Displaying the lower thread counter operation setting value  
|   | ・When the key is pressed, the setting value is displayed. |

| 4 | Setting lower thread counter operation  
|   | ・When the D key is pressed, the "on" display will appear.  
|   | ・When the C key is pressed, the "oFF" display will appear.  
|   | ・When the key is pressed, the initial value will be reset.  
|   | NOTE:  
|   | If the key is pressed once more, the indicator will switch off and the display will return to the setting item. |

| 5 | Press the key.  
|   | Setting mode will be exited and normal operation will be possible. |
4. USING THE OPERATION PANEL (ADVANCED OPERATIONS)

4-6-8. Prev. thread away
When "Prev. thread away" is enabled, the pitch at the sewing start can be increased in order to reduce cases of the thread pulling out.

1. In sewing standby mode, press the 
   key while holding down the 
   key to switch to function setting mode.
   • "A01 UPdn" will be displayed.

2. Selecting "A11 PtA" (prev. thread away)
   Press the - or + key to select "A11 PtA".
   • When the + key is pressed, the next setting is displayed.
   • When the - key is pressed, the previous setting is displayed.

3. Displaying the "Prev. thread away" setting value
   • When the key is pressed, the setting value is displayed.

4. Setting "Prev. thread away"
   • When the D key is pressed, the "on" display will appear.
   • When the C key is pressed, the "oFF" display will appear.
   • When the key is pressed, the initial value will be reset.
   NOTE:
   If the key is pressed once more, the indicator will switch off and the display will return to the setting item.

5. Press the key.
   Setting mode will be exited and normal operation will be possible.
4-6-9. Short trailing thread

When short trailing thread is enabled, the trailing length of the thread can be made shorter.

1. In sewing standby mode, press the \( \text{\( \uparrow \)} \) key while holding down the \( \text{\( \downarrow \)} \) key to switch to function setting mode.
   - "A01 UPdn" will be displayed.

2. Selecting "A21 ttSH" (short trailing thread)
   - Press the - \( \downarrow \) or + \( \uparrow \) key to select "A21 ttSH".
   - When the + \( \uparrow \) key is pressed, the next setting is displayed.
   - When the - \( \downarrow \) key is pressed, the previous setting is displayed.

3. Displaying the short trailing thread setting value
   - When the \( \text{\( \circ \)} \) key is pressed, the setting value is displayed.

4. Setting short trailing thread
   - When the D \( \Delta \) key is pressed, the "on" display will appear.
   - When the C \( \Delta \) key is pressed, the "oFF" display will appear.
   - When the \( \text{\( \circ \)} \) key is pressed, the initial value will be reset.
   **NOTE:**
   If the \( \text{\( \circ \)} \) key is pressed once more, the \( \text{\( \circ \)} \) indicator will switch off and the display will return to the setting item.

5. Press the \( \text{\( \circ \)} \) key.
   Setting mode will be exited and normal operation will be possible.
4-6-10. Correction sewing function (1)

When the correction sewing function (A04) is enabled, the hand switch correction sewing function can be set. For details on the functions which can be set, refer to "4-12. Hand switch" for the settings when the hand switch is set as a correction sewing switch.

1. In sewing standby mode, press the key while holding down the key to switch to function setting mode.
   - "A01 UPdn" will be displayed.

2. Press the - or + key to select "A31 HSCF".
   - When the + key is pressed, the next setting is displayed.
   - When the - key is pressed, the previous setting is displayed.

3. Press the key. The correction sewing function setting value is displayed.

4. Press the D key.
   - When the D key is pressed, the setting value increases from "oFF" to "1" through to "9".
   - When the C key is pressed, the setting value decreases from "9" through to "1" to "oFF".
   - When the key is pressed, the initial value will be reset.

   **NOTE:**
   If the key is pressed once more, the indicator will switch off and the display will return to the setting item.

5. Press the key.
   Setting mode will be exited and normal operation will be possible.
4-6-11. Correction sewing function (2)

When the correction sewing function (A04) is disabled, the hand switch functions other than correction sewing can be set. For details on the functions which can be set, refer to “4-12. Hand switch” for the settings when the hand switch is set to other than a correction sewing switch.

1. In sewing standby mode, press the \( \text{[button]} \) key while holding down the \( \text{[button]} \) key to switch to function setting mode.
   - "A01 UPdn" will be displayed.

2. Selecting “A32 HSoF” (correction sewing function)
   - Press the \( \text{[button]} \) or \( \text{[button]} \) keys to select "A32 HSoF".
   - When the \( \text{[button]} \) key is pressed, the next setting is displayed.
   - When the \( \text{[button]} \) key is pressed, the previous setting is displayed.

3. Displaying the setting value for a function other than correction sewing
   - When the \( \text{[button]} \) key is pressed, the setting value is displayed.

4. Setting a function other than correction sewing
   - When the \( \text{[button]} \) key is pressed, the setting value increases from "oFF" to "1" through to "16".
   - When the \( \text{[button]} \) key is pressed, the setting value decreases from "16" through to "1" to "oFF".
   - When the \( \text{[button]} \) key is pressed, the initial value will be reset.

**NOTE:**
If the \( \text{[button]} \) key is pressed once more, the \( \text{[button]} \) indicator will switch off and the display will return to the setting item.

5. Press the \( \text{[button]} \) key.
   - Setting mode will be exited and normal operation will be possible.
4-7. Memory switch setting method

1. In sewing standby mode, press the key while holding down the key to switch to memory switch setting mode.
   - “001” or the memory switch number which was set previously will be displayed.

2. Press the keys to select the number for the memory switch to be set.
   - When the key is pressed, the next setting is displayed.
   - When the key is pressed, the previous setting is displayed.

3. While pressing the key, press the keys to select the number for the memory switch which is different from the initial value.
   - When the key is pressed while holding down the key, the next setting item is displayed.
   - When the key is pressed while holding down the key, the previous setting item is displayed.

4. When the key is pressed, the setting value increases or it turns ON.
   - When the key is pressed, the setting value decreases or it turns OFF.
   - When the key is pressed the initial value will be set.

5. When the key is pressed, the setting value is confirmed.

6. Press the key. Setting mode will be exited and normal operation will be possible.
### 4-8. List of memory switch settings

### Sewing program settings (400 to 499)

<table>
<thead>
<tr>
<th>No.</th>
<th>Setting range</th>
<th>Initial value</th>
<th>Setting units</th>
<th>Setting details</th>
</tr>
</thead>
</table>
| 400 | ON/OFF | OFF | – | Stopping while start backtacking is in progress, and speed during start backtacking  
ON: When the treadle is returned to the neutral position, start backtacking can be stopped before it is finished, and the speed during start backtacking becomes the speed corresponding to the treadle depression amount (low speed - start backtacking speed)  
OFF: When the treadle is returned to the neutral position, start backtacking ends, sewing stops and the sewing speed becomes the start backtacking speed (constant) |
| 401 | ON/OFF | ON | – | Feed direction when sewing machine motor is stopped immediately after start backtacking is complete  
OFF: Sewing machine motor stops after start backtacking is complete  
(*) If No. 400 is set to "OFF", operation occurs when the treadle is depressed slightly.  
ON: After start backtack sewing, the feed moves forward, then the sewing machine motor stops. |
| 402 | 1 - 2 | 1 | 1 | Operation during pleat presser sewing when hand switch is on  
(Fixed stitch sewing loading function)  
1: Reverse stitch sewing operation when hand switch is on  
2: Fixed stitch sewing operation when hand switch is on |
| 403 | 300 - 4000 (sti/min) | 4000 (sti/min) | 100 (sti/min) | 1st stitch sewing speed for slow start  
(*) Only enabled when slow start (A04) is set to "4". (Refer to "4-6-5. Slow start"). |
| 404 | 300 - 4000 (sti/min) | 4000 (sti/min) | 100 (sti/min) | 2nd stitch sewing speed for slow start  
(*) Only enabled when slow start (A04) is set to "4". (Refer to "4-6-5. Slow start"). |
| 405 | 300 - 4000 (sti/min) | 4000 (sti/min) | 100 (sti/min) | 3rd stitch sewing speed for slow start  
(*) Only enabled when slow start (A04) is set to "4". (Refer to "4-6-5. Slow start"). |
| 406 | 300 - 4000 (sti/min) | 4000 (sti/min) | 100 (sti/min) | 4th stitch sewing speed for slow start  
(*) Only enabled when slow start (A04) is set to "4". (Refer to "4-6-5. Slow start"). |
| 407 | ON/OFF | ON | – | If the main pitch is increased or decreased, the backtack sewing pitch will also change in sync.  
ON: Synchronized  
OFF: Not synchronized  
(*) If design stitches have been selected for the main pattern, if the main pattern contains multiple steps, or if the backtack sewing pattern contains a condense pitch setting, the backtack sewing pitch will not change in sync with changes to the main pitch.  
(2) When synchronization (ON) is set and one of design stitches 1 to 5 has been set as the main pitch, the backtack sewing pitch will always be set to the maximum pitch (5.00). If combining design stitches and backtack sewing, it is recommended that this setting be "OFF" (not synchronized). |
| 408 | 2 - 6 | 2 | 1 | Repeat pattern when start backtacking sewing pattern (AB) is selected  
2: A - B  
3: B - A - B  
4: A - B - A - B *Same as AB (x2)  
5: B - A - B - A - B  
6: A - B - A - B - A - B *Same as AB (x3) |
| 409 | 0 - 1 | 0 | 1 | Operation mode for manual production counter increment function using hand switch  
0: Counter can be incremented at any time  
1: Counter can only be incremented after sewing stops and thread has been trimmed |
### Standard device settings (500 to 599)

<table>
<thead>
<tr>

2: On together with starting of machine motor, and off according to the timing set by No. 503 |
| 502 | 90 - 270 (Degrees) | 180 (Degrees) | 1             | Thread presser ON timing (upper shaft angle)  
(*) When No. 501 is set to "OFF" or "2", nothing is displayed. (The setting is disabled.)  
Thread presser OFF timing (upper shaft angle)  
(*) When No. 501 is set to "OFF", nothing is displayed. (The setting is disabled.) |
| 503 | 270 - 430 (Degrees) | 320 (Degrees) | 1             | Feed timing for 1st stitch at sewing start *1  
Feed timing for 2nd stitch at sewing start *1  
Feed timing for 3rd stitch at sewing start *1  
Feed timing for 1st stitch at sewing end *2  
Feed timing for 2nd stitch at sewing end *2  
Feed timing for 3rd stitch at sewing end *2 |
4-9. Setting design stitches

If you hold down the key and press the key while the number of stitches, speed, counter, locus or program is displayed, design stitches can be set.

Up to five different types of design stitch can be created, and each one can contain up to a maximum of eight steps. By setting design stitches, you can sew patterns at special pitches which cannot be used when normal sewing only is carried out. Design stitches cannot be set or edited when memory switch No. 312 is set to "1" or "2".

Example of design stitch setting

<table>
<thead>
<tr>
<th>Item</th>
<th>Step</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4…</th>
</tr>
</thead>
<tbody>
<tr>
<td>No. of stitches</td>
<td>1</td>

<td>0</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Direction</td>
<td>FW</td>
<td>FW</td>
<td>FW</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Sewing pitch</td>
<td>3.00</td>
<td>1.00</td>
<td>3.00</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

* To end the program, set "No. of stitches" to "0".

When sewing using the setting example

1618D
4. USING THE OPERATION PANEL (ADVANCED OPERATIONS)

4-9-1. Switching the display item

1. In sewing standby mode, press the \[\text{key}\] while holding down the \[\text{key}\] to switch to design switch setting mode.
   - “Fx****” (*) will be displayed.

2. Switching to setting item display
   - If the pitch setting which was displayed before the mode was switched is “DS.1” to “DS.5”, the display will switch to the setting for step 1 (No. of stitches) for the stitch number which was selected before the mode was switched. If the pitch setting before the mode was switched was a normal sewing pitch, the "No. of stitches" setting for “F11” (stitch 1, step 1) will be displayed.

3. When the \[\text{key}\] is pressed, the step number increases by 1. *1
   - When the \[\text{key}\] is pressed, the step number decreases by 1. *2

   *1 If you press the \[\text{key}\] when the step number is “8”, the design stitch number will increase by 1 and the step number will change to 1. (For design stitch number 5, it will become 1.)
   *2 If you press the \[\text{key}\] when the step number is “1”, the design stitch number will decrease by 1 and the step number will change to 8. (For design stitch number 1, it will become 5.)
4-9-2. No. of stitches setting

1. In sewing standby mode, press the key while holding down the key to switch to design switch setting mode.

2. Switching to setting item display

   While referring to "4-9-1. Switching the display item", select the step of the design stitch which you would like to change, and then switch to number of stitches setting mode.

3. Set the number of stitches

   - When the key is pressed, the number of stitches for the selected step decreases by 1.
   - When the key is pressed, the number of stitches for the selected step increases by 1.

   If the number of stitches is set to 1 or more, the setting for the selected design stitch step is applied to the sewing operation.
   * The number of stitches for step 1 cannot be set to "0".

4. Press the key.

   Setting mode will be exited and normal operation will be possible.
### 4-9-3. Direction setting

1. **In sewing standby mode, press the key while holding down the key to switch to design switch setting mode.**

2. **Switching to setting item display**
   
   While referring to "4-9-1. Switching the display item", select the step of the design stitch which you would like to change, and then switch to direction setting mode.

3. **Set the direction**
   
   - When the C △ key is pressed, the feed direction for the selected step will be set to forward (fw: forward direction).
   - When the D △ key is pressed, the feed direction for the selected step will be set to reverse (bw: reverse direction).

   * The reverse direction setting is only enabled when the sewing pattern is normal sewing or fixed stitch sewing. (If reverse fixed stitch sewing, continuous backtack sewing or pleat presser sewing is selected, the setting will be disabled and all feed operations will be forward only.)

4. **Press the key.**
   
   Setting mode will be exited and normal operation will be possible.
### 4-9-4. Pitch setting

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>In sewing standby mode, press the [ \text{ [ ] } ] key while holding down the [ \text{ [ ] } ] key to switch to design switch setting mode.</td>
</tr>
<tr>
<td>2</td>
<td>While referring to &quot;4-9-1. Switching the display item&quot;, select the step of the design stitch which you would like to change, and then switch to pitch setting mode.</td>
</tr>
</tbody>
</table>
| 3    | • When the C \[ \text{ \[ \] } \] key is pressed, the pitch for the selected step decreases by 0.05 (mm).  
   • When the D \[ \text{ \[ \] } \] key is pressed, the pitch for the selected step increases by 0.05 (mm). |
| 4    | Press the \[ \text{ \[ \] } \] key. Setting mode will be exited and normal operation will be possible. |
4-9-5. Design stitch sewing method

1. In sewing standby mode, if you press the + key while the pitch is already at the maximum setting, you can use the pitch which has been set for design stitches.
   - You can change to design stitches regardless of whether the number of stitches, speed, counter, locus or program is being displayed in the 4-digit display.

   * Design stitches cannot be displayed or sewn when MSW312 is set to "1" or "2" or while the backtack sewing speed is being displayed.

2. Switching design stitches
   - When the + key is pressed, the design stitch number increases from "1" through to "5".
   - When the - key is pressed, the design stitch number decreases from "5" through to "1".

3. To return to the normal pitch
   - When [DS.1] is displayed, press the - key to return to the maximum pitch display. Sewing at the normal pitch will then be possible.

Note:
① When memory switch No. 407 (= MSW407) (Synchronized/not synchronized to pitch) is set to "ON" (synchronized), the backtack sewing pitch will appear from looking at the display to be "DS.1", but because backtack sewing is not a function which is supported for design stitches, backtack sewing will actually be carried out at the maximum pitch. If design stitches are selected during normal sewing and start and end backtack stitches are to be sewn, it is recommended that you set MSW407 to "OFF" (not synchronized) and then set the backtack sewing pitches separately.
② Reverse feed operation is carried out when any one of the hand switch, program reverse fixed stitches, design stitches (reverse direction) is enabled.
* If an instruction for a different reverse operation occurs during reverse operation, sewing will continue in the reverse direction without returning to forward operation.
4-10. Reading and writing data using USB media

Programs and memory switch data can be copied between sewing machines by means of USB media.

**CAUTION**

- Turn off the power before connecting the USB media.
- Do not connect anything to the USB port other than the USB media. If this is not observed, problems with operation may result. Attach the cap after use.

1. First connect the USB media to the sewing machine.
2. While pressing the key, turn on the power switch.
   - "B01 MAin" will be displayed.

1. Press the - / + keys to select the item to read/write.
2. Press the key to run the selected read/write item.
3. When the key is pressed, normal sewing machine operation will be possible.

The read/write items that can be selected are as follows.

<table>
<thead>
<tr>

4-11. Resetting all settings to their defaults

If the sewing machine stops operating normally, the cause may be that an incorrect setting may have been made for the memory data by means of memory switches, for instance. In such cases, it may be possible to restore normal operation by following the steps given below to initialize the memory setting data.

1. While pressing the key, turn on the power switch. The mode will switch to initialization mode and "C01 ALLC" will appear in the display.
2. Press the - / + keys to select the item to be initialized.

<table>
<thead>
<tr>
<th>3-digit display</th>
<th>4-digit display</th>
<th>Initialization item</th>
</tr>
</thead>
<tbody>
<tr>
<td>「C01」</td>
<td>「ALLC」</td>
<td>Clear all</td>
</tr>
<tr>
<td>「C02」</td>
<td>「MSWC」</td>
<td>Memory switch initialization</td>
</tr>
<tr>
<td>「C03」</td>
<td>「PGMC」</td>
<td>Program initialization</td>
</tr>
<tr>
<td>「C04」</td>
<td>「PDIC」</td>
<td>Production data initialization</td>
</tr>
</tbody>
</table>

3. Press the key for 2 seconds or more. When initialization is complete, the 4-digit display will change to show "End", and then after one second it will switch back to the previous display.
4. Press the key. Initialization mode will be exited and normal sewing machine operation will then be possible.

* For details on initialization items other than "C01 ALL", refer to the Service Manual.
4-12. Hand switch

The following functions can be set for the hand switch.
When the correction sewing setting is "ON", the hand switch operates as a correction sewing switch, and when the correction sewing setting is "OFF", the hand switch operates as a switch for functions other than correction sewing.
(Refer to "4-6-10. Correction sewing function (1)" for details on changing the correction sewing settings.)

<When the optional hand switch is being used>
The hand switch and the optional hand switch cannot be pressed at the same time. (The one which was pressed first will be activated.)

Hand switch and optional hand switch settings can be made by setting A31 to A36 in the basic functions. (Refer to "4-6. Setting basic functions").

(*2) Set the 2nd pitch separately. (Refer to "4-12-3. Setting the 2nd pitch".)

(*3) When using this setting, "Settings for correction sewing switch" are disabled, even if the correction sewing setting (A04) is ON.
4-12-1. Hand switch function setting

1. **Switching to hand switch setting mode**
   - In sewing standby mode, press the [ ] key while holding down the [ ] key to switch to function setting mode.
   - "A01 UPdn" will be displayed.

2. Press the - / + keys to set to A31 or A32, and then press the [ ] key to select.
   
<table>
<thead>
<tr>
<th>Menu No.</th>

</tr>
</thead>
<tbody>
<tr>
<td>A31</td>
<td>Settings for correction sewing switch</td>
</tr>
<tr>
<td>A32</td>
<td>Settings for other than correction sewing switch</td>
</tr>
</tbody>
</table>

3. Press the D / C keys to select the desired setting value.
   - When the [ ] key is pressed, the initial value will be reset.
   - When the [ ] key is pressed, the mode returns to function setting mode.
   - When the [ ] key is pressed, the mode returns to sewing standby mode.
4-12-2. 2nd correction pitch setting

Normally, correction sewing is carried out at the currently-set sewing pitch. However, when "Correction sewing at 2nd correction pitch" or "Reverse correction sewing at 2nd correction pitch" is set for carrying out correction sewing, then correction sewing is carried out at the pitch which is set below.

1. **<Switching to correction 2nd pitch ratio screen>**

   In function setting mode, press the - / + keys to set A34, and then press the key to select.

   ![Set to A34](image)

2. **<Switching to 2nd pitch ratio screen>**

   Press the D / C keys to set the ratio with respect to the current pitch.

   The setting range is from 10% to 250%.
   - When the key is pressed, the initial value will be reset.
   - When the key is pressed, the mode returns to function setting mode.
   - When the key is pressed, the mode returns to sewing standby mode.

4-12-3. 2nd pitch setting

If "2nd pitch" has been set and the hand switch is pressed during sewing, the stitch pitch will change to the pitch set as follows.

1. **<Switching to 2nd pitch ratio screen>**

   In function setting mode, press the - / + keys to set A33, and then press the key to select.

   ![Set to A33](image)

2. **<Switching to 2nd pitch ratio screen>**

   Press the D / C keys to set the ratio with respect to the current pitch.

   The setting range is from 10% to 250%.
   - When the key is pressed, the initial value will be reset.
   - When the key is pressed, the mode returns to function setting mode.
   - When the key is pressed, the mode returns to sewing standby mode.
5. CLEANING

CAUTION

- Turn off the power switch before carrying out these operations. The machine may operate if the treadle is depressed by mistake, which could result in injury.
- Be sure to wear protective goggles and gloves when handling the grease so that it does not get into your eyes or onto your skin. Otherwise inflammation can result. Furthermore, do not drink the oil or eat the grease under any circumstances. Diarrhea or vomiting may result. Keep the oil out of the reach of children.
- Secure the table so that it will not move when tilting back the machine head. If the table moves, it may crush your feet or cause other injuries.
- Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.

The following cleaning operations should be carried out each day in order to maintain the performance of this machine and to ensure a long service life. Furthermore, if the sewing machine has not been used for a long period of time, carry out the following cleaning procedures before using it again.

1. If the oil level drops below the lower reference line (2) on the oil cover (1), be sure to replenish the oil. (Refer to “2-3. Lubrication”.)

2. Return the machine head to its original position.
3. Replace the needle if it is bent or if the tip is broken.
4. Check that the upper threads have been threaded correctly.
5. Carry out a test sewing.
6. STANDARD ADJUSTMENTS

CAUTION

- Maintenance and inspection of the sewing machine should only be carried out by a qualified technician.
- Ask your Brother dealer or a qualified electrician to carry out any maintenance and inspection of the electrical system.
- If any safety devices have been removed, be absolutely sure to re-install them to their original positions and check that they operate correctly before using the machine.
- Secure the table so that it will not move when tilting back the machine head. If the table moves, it may crush your feet or cause other injuries.
- Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.

6-1. Arm thread guide R

The standard position of arm thread guide R (1) is the position where the screw (2) is in the center of the adjustable range for arm thread guide R (1).

NOTE:
To adjust the position, loosen the screw (2) and then move arm thread guide R (1).

- When sewing heavy-weight material, move arm thread guide R (1) to the left. (The thread take-up amount will become greater.)
- When sewing light-weight material, move arm thread guide R (1) to the right. (The thread take-up amount will become less.)

Turn off the power switch and disconnect the power cord plug at the following times. The machine may operate if the treadle is depressed by mistake, which could result in injury.
- When carrying out inspection, adjustment and maintenance
- When replacing consumable parts such as the rotary hook and knives

Always be sure to turn off the power switch and then wait one minute before opening the motor cover. If you touch the surface of the motor, it may cause burns.

If the power switch needs to be left on when carrying out some adjustment, be extremely careful to observe all safety precautions.
6-2. Presser foot height

The standard height of the presser foot (1) is 6 mm when the presser foot (1) is raised by means of the lifting lever (2).

1. Loosen the nut (3), and then loosen the adjustment screw (4) so that there is no pressure applied to the presser foot.
2. Raise the presser foot (1) by using the lifting lever (2).
3. Remove the rubber cap (5) from the face plate.
4. Loosen the bolt (6) and then move the presser bar (7) up or down until the presser foot (1) is at the standard height of 6 mm.
5. Tighten the bolt (6).
6. Install the rubber cap (5).
7. Adjust the presser foot pressure using the presser adjusting screw (4), and then tighten the nut (3).

NOTE:
After adjusting, check that the needle moves down into the center of the groove in the presser foot.
6-3. Adjusting the feed dog height

1. Turn on the power.
2. Turn off start backtacking, best PFM mode, slow start and special locus.
3. Set the feed pitch to 5 mm.
4. Press and hold the ENTER key (1) and then press the SEL key (2).

* The standard height of the feed dog (3) when it is raised as far as possible above the surface of the needle plate is 0.8 mm for -[03] specifications, 0.8 mm for -[03A] specifications and 1.2 mm for -[05] specifications.

5. Turn the machine pulley to move the feed dog (3) to its highest position above the needle plate.
6. Tilt back the machine head.
7. Loosen the screw (4).
8. Turn the feed lifting shaft crank (5) to move the feed bracket (6) up and down.
9. Tighten the screw (4).
10. After adjusting, press the SEL key (2).
6-4. Adjusting the feed dog angle

1. Turn on the power.
2. Turn off start backtack sewing, best PFM mode, slow start and special locus.
3. Set the feed pitch to 5 mm.
4. Press and hold the ENTER key (1) and then press the SEL key (2).

* The standard angle for the feed dog (3) when it drops until it is aligned with the top of the needle plate is when the “○” mark on the shaft (4) is aligned with the feed rocker bracket arm (5) and the feed dog (3) is parallel to the needle plate.
5. Turn the machine pulley to move the feed dog (3) to its highest position above the needle plate.
6. Tilt back the machine head.
7. Loosen the set screw (6).
8. Turn the shaft (4) in the direction of the arrow within a range of 90° with respect to the standard position.
   - In order to prevent puckering, lower the front of the feed dog (3). (Fig. [B])
   - In order to prevent the material from slipping, raise the front of the feed dog (3). (Fig. [A])
9. Securely tighten the set screw (6).
10. After adjusting, press the SEL key (2).

NOTE:
The height of the feed dog (3) will change after the angle has been adjusted, so it will be necessary to re-adjust the height of the feed dog (3).

6-5. Adjusting the needle bar height

Reference line (a) on the needle bar (1) should be aligned with the lower edge of the needle bar bush (2) as shown in the illustration when the needle bar (1) is at its lowest position.
1. Turn the machine pulley to set the needle bar (1) to its lowest position.
2. Remove the rubber cap (3) from the face plate.
3. Loosen the screw (4) and move the needle bar (1) up or down to adjust its position.
4. Securely tighten the screw (4).
5. Install the rubber cap (3).
6-6. Adjusting the needle and feed mechanism timing

1. Turn on the power.
2. Turn off start backtack sewing, best PFM mode, slow start and special locus.
3. Set the feed pitch to 5 mm.
4. Press and hold the ENTER key (1) and then press the SEL key (2).

* The illustration at left shows the standard position for the needle tip when the feed dog (3) is lowered from its highest position until it is flush with the top of the needle plate (4).

5. Remove the side plate.
6. Loosen the two set screws (6) of the vertical cam (5), and then turn the vertical cam (5) slightly to adjust the timing.
   - To advance the needle timing, turn in the direction of <A>. To retard the needle timing, turn in the direction of <B>.
   - To prevent material slippage from occurring, retard the needle timing. (Fig. [B])
   - To improve thread tightening, advance the needle timing. (Fig. [A])

**NOTE:**
If the vertical cam (5) is turned too far in the direction of <A>, it may cause the needle to break.

7. After adjusting, securely tighten the set screw (6).
8. Install the side plate.
9. After adjusting, press the SEL key (2).
6-7. Needle and rotary hook timing

The tip of the rotary hook (3) should be aligned with the center of the needle (4) when the needle bar (1) moves up 1.8 mm (2.2 mm for -03A and -05 specifications) from its lowest position to the position where reference line (b) is aligned with the lower edge of the needle bar bush (2) as shown in the illustration. (The distance from the upper edge of the needle hole to the rotary hook tip will be 0.5 to 0.7 mm at this time.)

1. Turn the machine pulley to raise the needle bar (1) from its lowest position until reference line (b) is aligned with the lower edge of the needle bar bush (2) as shown in the illustration.

2. Loosen the three set screws (5), and then align the rotary hook tip (3) with the center of the needle (4). The distance between the tip of the rotary hook (3) and the needle (4) should be approximately 0 - 0.05 mm at this time.

3. Securely tighten the three set screws (5).
6-8. Adjusting the rotary hook lubrication amount

**CAUTION**

Be careful not to touch your fingers or the lubrication amount check sheet against moving parts such as the rotary hook or the feed mechanism when checking the amount of oil supplied to the rotary hook. If care is not taken, injury may result.

Use the following procedure to check the amount of oil being supplied to the rotary hook when replacing the rotary hook or when changing the sewing speed.

<Checking the lubrication amount>
1. Remove the thread from all points from the thread take-up lever to the needle.
2. Use the lifting lever to lift the presser foot.
3. Run the machine at the normal sewing speed for approximately 1 minute without sewing any material (following the same start/stop pattern as when actually sewing).
4. Place the lubrication amount check sheet (1) to the left of the rotary hook (2) and hold it there. Then run the sewing machine at the normal sewing speed for 8 seconds. (Any type of paper can be used as the lubrication amount check sheet (1).)
5. Check the amount of oil which has spattered onto the sheet.

If adjustment is necessary, carry out the following operations in "Adjusting the lubrication amount".

<Adjusting the lubrication amount>
1. Tilt back the machine head.
2. Turn the rotary hook adjusting screw (3) to adjust the lubrication amount.
   - If the rotary hook adjusting screw (3) is turned clockwise, the lubrication amount becomes greater.
   - If the rotary hook adjusting screw (3) is turned counterclockwise, the lubrication amount becomes smaller.
3. Check the lubrication amount again according to the procedure given in "Checking the lubrication amount" above.

**NOTE:**
Turn the rotary hook adjusting screw (3) and check the lubrication amount repeatedly until the lubrication amount is correct.
4. Check the lubrication amount again after the sewing machine has been used for approximately two hours.
6-9. Thread trimming (Other than short trailing thread specifications)

1. Turn off the power switch.
2. Remove the presser foot, needle plate and feed dog.
3. Tilt back the machine head.
4. Loosen the screw (2) of the thread trimmer lever (1).

5. Install the movable knife (4) to the movable knife holder (5) with the two screws (3).
<Movable knife and fixed knife position adjustment>

1. Turn the machine pulley, and then push the plunger (1) of the thread trimming solenoid with your finger.

2. In this condition, turn the machine pulley until the roller shaft (4) of the thread trimmer cam lever assembly (3) is sitting on top of the thread trimmer cam (2), then move the thread trimmer lever (7) to adjust its position so that the tip of the fixed knife (5) and the blade of the movable knife (6) are meshed by 1 to 1.5 mm, and then tighten the screw (8).
   * Tighten the screw (8) so that there is no play in the forked shaft (9).
   * The lower thread finger (10) must be underneath the movable knife (6).

3. Install the feed dog, needle plate and presser foot.
6. STANDARD ADJUSTMENTS

<Thread trimming cam position adjustment>

1. Raise the needle bar 5 mm from its lowest position so that the reference line (b) is aligned with the bottom edge of the needle bar bush, and then push the plunger (1) of the thread trimmer solenoid in the direction of the arrow with your finger.

Adjust the position of the thread trimmer cam (2) at this time so that the roller shaft (4) of the thread trimming cam lever assembly (3) touches the hollow (c) of the thread trimmer cam (2) and so that the clearance between the edge of the thread trimmer (2) and the roller (4) is 0.5 to 1.0 mm, and then tighten the set screw (5). (Fig. [A])

2. Check that the edge of the thread trimmer cam (2) and the roller shaft (4) do not touch when the roller shaft (4) returns to the right. (Fig. [B])

* Tighten the two set screws (5) to approximately 4 N.m.
6-10. Thread trimming (Short trailing thread specifications)

1. Turn off the power switch.
2. Remove the presser foot, needle plate and feed dog.
3. Tilt back the machine head.
4. Loosen the screw (2) of the thread trimmer lever (1). (This will allow the upper and lower knife holders and the needle bar mechanism to operate independently.)

5. Install the lower knife (4) to the lower knife holder (5) with the two screws (3).

6. Install the upper knife (8) with the two screws (6) and (7).
   * Install the upper knife (8) so that it is almost parallel to the ridge line on the mounting surface of the upper knife holder (9).
   * If the upper knife (8) is tilted forward, the knife pressure will increase, and if it is tilted backward, the knife pressure will decrease.
   * After adjusting, operate the upper and lower knife holders by hand and check that the thread can be trimmed.

* If using thick thread, or if the thread is not being trimmed, adjust the tilt of the upper knife (8) forward.
* Tilt the upper knife (8) forward slightly (about 0.3 mm) so that the ridge line on the mounting surface of the upper knife holder (9) is slightly visible.
  (The head of the screw (7) is pan-shaped, and so the upper knife (8) can pivot on this screw when it is tilted.)
  Be careful not to tilt it too much, otherwise the upper knife will go underneath the lower knife, and damage may result.
6. STANDARD ADJUSTMENTS

7. Turn the machine pulley while the thread trimmer solenoid is still turned on so that the thread trimmer cam (10) moves the thread trimmer cam roller (11) to its maximum displacement position.
   * Make sure that the thread trimmer solenoid does not turn off and does not return during this step.

8. Set the maximum meshing amount for the upper and lower knives to 2 mm.
   * Turn the thread trimmer lever (1) to align the tip of the upper knife (8) with the center of the index mark (12) on the lower knife (4).
   * Make sure that the tip of the upper knife (8) does not go past the index mark (12).

9. Tighten the screw (2) of the thread trimmer lever (1).
   * Make sure that there is no play in the thrust direction in the forked shaft (13) of the thread trimmer lever (1) (see illustration on page 7).
<Thread trimming cam position adjustment>

1. Turn the machine pulley to raise the needle bar 6 mm from its lowest position (reference line (a) position) so that reference line (b) is aligned with the bottom edge of the needle bar bush.

2. At the above position, push the plunger (1) of the thread trimming solenoid with your finger in the direction of the arrow. Adjust the position of the thread trimmer cam (2) at this time so that the roller shaft (4) of the thread trimming cam lever assembly (3) touches the hollow (c) of the thread trimmer cam (2) and so that the clearance between the edge of the thread trimmer (2) and the roller (4) is 0.5 to 1.0 mm, and then tighten the set screw (5). (Fig. [A])

3. Check that the edge of the thread trimmer cam (2) and the roller shaft (4) do not touch when the roller shaft (4) returns to the right. (Fig. [B])

   * Tighten the two set screws (5) to approximately 4 N.m.
# 7. TROUBLESHOOTING

- Please check the following points before calling for repairs or service.
- Simplified details can be checked on the panel. (Menu → Troubleshooting)
- If the following remedies do not fix the problem, turn off the power switch and consult a qualified technician or the place of purchase.

## DANGER

Wait at least 5 minutes after turning off the power switch and disconnecting the power cord from the wall outlet before opening the control box cover. Touching areas where high voltages are present can result in severe injury.

## CAUTION

Turn off the power switch and disconnect the power cord before carrying out these operations. The machine may operate if the treadle is depressed by mistake, which could result in injury.

### 7-1. Sewing

Items with an "*" in the "Page" column should only be checked by a qualified technician.

</tr>
</tbody>
</table>
| 5 Skipped stitches at sewing start Thread unraveling at sewing start. | - Is the thread take-up spring tension too strong? Reduce the tension of the thread take-up spring.  
- Is the thread take-up spring operating range too large? Lower the position of the thread take-up spring.  
- Is the trailing length of the upper thread too short after thread trimming? Adjust the pretension.  
- Are the threads not being trimmed cleanly? Sharpen the fixed knives, or replace the fixed and movable knives if necessary. Replace the movable knife.  
- Is the needle too thick? Replace the needle with a needle that is one rank thinner.  
- Is the length of thread trailing out from the bobbin case after thread trimming too short?  
  If the bobbin is spinning loosely, replace the anti-spin spring in the bobbin case.  
- Is the sewing speed too fast at the sewing start? Use the slow start key.  
- Is the needle up stop position too high? Adjust the needle up stop position.  
- Is the upper thread trailing length too short after thread trimming? Turn on the "Prev. thread away" function.  
- If the thread is pulling out at the sewing start, try the following remedies.  
  1. Check the upper thread trailing length.  
  2. Set the slow start number to "3" or less.  
  3. Re-adjust the upper thread trailing length to make it longer.  
  4. Select "Prev. thread away PARA" from "Function setting".  
     (Refer to "4-6. Setting basic functions").  
     (1) Set the 2nd stitch pitch to "3".  
     (2) Increase the current stitch pitch settings for the 1st and 2nd stitches by about 0.5 to 1.  
- Is the needle hole in the needle plate too large for the needle being used? Replace the needle place with one with a needle hole that is one rank thinner.  
- Is the presser foot groove too wide? Replace the presser foot with one that has a narrower groove so that it presses the material at the needle drop position.  
- Is the sewing machine starting to sew before the presser foot has dropped? Lower the presser foot before starting sewing.  
- Is the presser foot being raised before the sewing machine has stopped sewing? Raise the presser foot after the sewing machine has stopped sewing. | 5, 61, 14, 24, 29, 25, 24, * |
| 6 Large bird's nests are forming at the sewing start. | - Is the upper thread trailing length too long after thread trimming? Increase the tension of the pre-tension. | 29, * |

| 7 Uneven seam                                                         | • Is the presser foot pressure too weak?  
  Adjust the presser foot pressure.                                     |      |
|                                                                        | • Is the feed dog too low?  
  Adjust the feed dog height.                                              |      |
|                                                                        | • Is the bobbin scratched?  
  If the bobbin is damaged, smooth it with an oiled grindstone or replace it.  
  Alternatively, replace the bobbin.                                      | 56*  |
| 8 Large degree of puckering (Thread is too tight)                      | • Is the upper thread tension too strong?  
  Make the upper thread tension as weak as possible.                        |      |
|                                                                        | • Is the lower thread tension too strong?  
  Make the lower thread tension as weak as possible.                        |      |
|                                                                        | • Is the needle tip blunt?  
  Replace the needle if it is blunt.                                        |      |
|                                                                        | • Is the needle too thick?  
  Replace with as thin a needle as possible.                                 |      |
|                                                                        | • Is the thread take-up spring tension too strong?  
  Make the thread take-up spring tension as weak as possible.               |      |
|                                                                        | • Is the thread take-up spring operating range too large?  
  Lower the position of the thread take-up spring to as low a position as possible. |      |
|                                                                        | • Is the presser foot pressure too strong?  
  Adjust the presser foot pressure.                                        |      |
|                                                                        | • Is the sewing speed too fast?  
  Gradually reduce the sewing speed.                                        | 18*  |
|                                                                        | • Is the angle of the feed dog correct?  
  Tilt the front of the feed dog down slightly.                             | 57*  |
| 9 Lower thread is tangled at the sewing start.  Bobbin is spinning     | • Is the bobbin spinning direction correct when the lower thread is being pulled?  
  Set the bobbin so that it turns in the opposite direction to the rotary hook. |      |
|  the sewing start.  Bobbin is spinning during thread trimming.         | • Is there too much thread wound onto the bobbin?  
  The bobbin winding amount should not be more that 80 %.                    |      |
|                                                                        | • Is the anti-spin spring attached?  
  Attach the anti-spin spring.                                              |      |
|                                                                        | • Is the bobbin turning smoothly?  
  If the bobbin is not turning smoothly, replace the bobbin.                 |      |
|                                                                        | • Is a bobbin other that the light-alloy bobbin specified by Brother being used?  
  Use only bobbins which are specified by Brother.                          |      |
<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible cause</th>
<th>Page</th>
</tr>
</thead>
</table>
| 10 Upper and lower threads are breaking. | ・ Is the needle tip bent? Is the needle tip blunt?  
If the needle tip is bent or blunt, replace the needle.  
・ Is the needle properly installed?  
If it is incorrect, install the needle correctly.  
・ Is the machine properly threaded?  
If it is incorrect, thread the thread correctly.  
・ Is the rotary hook sufficiently lubricated?  
If the oil gauge is down to the lower reference line in the oil gauge window, add more oil.  
・ Is the upper or lower thread tension too weak or too strong?  
Adjust the upper thread or lower thread tension.  
・ Is the upper thread may be loose because the thread take-up spring operating range is too small?  
Adjust the position of the thread take-up spring.  
・ Is the rotary hook, feed dog or other part damaged?  
If the thread path is damaged, smooth it with sandpaper or similar.  
Alternatively, replace the damaged part.  
・ Is the thread path damaged?  
If the thread path is damaged, smooth it with sandpaper.  
Alternatively, replace the damaged part. | 53 |
| 11 Thread breaks during backtack sewing. | ・ Is the backtack sewing speed too fast?  
Use the panel to reduce the backtack sewing speed. | 19 |
| 12 Backtack sewing pitch varies depending on the sewing direction. Backtack edge is not aligned. | Adjust using memory switch No. 201. | 38* |
| 13 Thread tightening around X-over seam areas. | ・ Is the height of the feed dog correct?  
Increase the feed dog height. | 56* |
| 14 Upper thread is pulling out of the needle after thread trimming. | ・ Is the upper thread trailing length after thread trimming appropriate?  
Decrease the tension of the pre-tension.  
・ Is the thread path not smooth enough?  
Use a file with a fine grain or sandpaper to polish smooth the thread path.  
・ Does the thread being used slip easily?  
Turn the needle bar bush thread guide D sideways to increase the resistance.  
・ If the upper thread is pulling out of the needle after thread trimming, check using the method given below.  
1. Check the upper thread trailing length.  
2. Re-adjust the upper thread trailing length to make it longer.  
3. Select "T/T short parameter" from "Function setting". (Refer to "4-6. Setting basic functions").  
(1) Delete the stitch pitch for the previous stitch.  
(2) Decrease the sewing speed for the final stitch and the stitch before it. | 24* |
<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible cause</th>

</thead>
</table>
| 15 Upper thread is raised above the material surface after thread trimming. | • Upper thread protrudes from the material surface after thread trimming.  
• Select "T/T short parameter" from "Function setting". (Refer to "4-6. Setting basic functions").  
1. Increase the pitch during thread trimming.  
2. Set the feed direction for sewing end processing to "bw". | 24* |
| 16 When T/T short is on, skipped stitches occur where they should be sewn at the sewing end. | • Use the T/T short parameters to delete the stitch before the final stitch.  
• Use the T/T short parameters to reduce the stitch pitch of the final stitch and the one before it.  
• Use the T/T short parameters to set the feed direction for sewing end processing to "bw".  
If sewing backtack stitches  
• Reduce the number of stitches (D) for backtack sewing by 1 stitch | 24* (71-15) |
| 17 When T/T short is on, condense stitches (the final stitch and the one before it) cannot be sewn neatly before thread trimming. | • Use the T/T short parameters to increase the stitch pitch.  
• Use the T/T short parameters to reduce the sewing speed. | 24* (71-15) |
| 18 Thread trailing length on underside of material is too long. | • Turn on the T/T short function.  
If you would like the trailing length to be even sorter after turning on the T/T short function.  
• Is the meshing position of the thread trimming knives directly below the needle hole?  
• Use the T/T short parameters to reduce the stitch pitch of the condense stitches (the final stitch and the one before it) before thread trimming.  
• Use the T/T short parameters to reduce the pitch during thread trimming. | 33* |
| 19 When T/T short is on, thread trailing length on underside of material is too short. | • Use the T/T short parameters to increase the pitch during thread trimming. | 24* (71-15) |
| 20 To prevent fraying at the sewing end | • Turn on T/T short processing, and then use the T/T short parameters to set the feed direction for sewing end processing to "bw". | 24* (71-15) |
| 21 Incorrect thread trimming (Upper and lower threads are both not being trimmed) | • Is the fixed knife or movable knife damaged or worn? Replace the fixed knife or the movable knife.  
• Is there not enough of a meshing amount between the upper knife and the lower knife?  
Adjust the tip of the upper knife to the lower knife index position so that the knives mesh. | 61* |

</thead>
</table>
| 22 Incorrect thread trimming (Upper thread is not being trimmed.) (Lower thread is not being trimmed.) | • Is the needle properly installed?  
  If it is incorrect, install the needle correctly.  
• Is the fixed knife or movable knife blunt?  
  Replace the fixed knife or the movable knife.  
• Tilt the upper knife forward slightly. (About 0.1 to 0.3 mm)  
• Is there not enough of a meshing amount between the upper knife and the lower knife?  
  Check that the tip of the upper knife comes to the lower knife index position so that the knives mesh. | 61*  |

| 23 Broken needle                             | • Is the material being pushed or pulled with excessive force during sewing?  
• Is the needle properly installed?  
  If it is incorrect, install the needle correctly.  
• Is the needle tip bent? Is the needle tip broken, or is the needle hole blocked?  
  Replace the needle.  
• Is the needle and rotary hook timing correct?  
  Adjust the height of the needle bar.  
  Adjust the clearance between the needle and the tip of the rotary hook.  
• Is the needle and feed mechanism timing correct?  
  Adjust to the standard timing.  
• Try pressing the special locus key and selecting No. 2 or No. 3. |
|----------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------|

**NOTE**

- It is extremely dangerous to leave any pieces of broken needle sticking in the material. If the needle breaks, search for all pieces until the whole of the needle is found again.
- Furthermore, we recommend that thorough steps be taken to account for such needles to comply with product liability regulations.

</table>
7-2. Error code displays

If an error code appears on the operation panel display
1. Make a note of the error code and then turn off the power.
2. After the operation panel display has turned off, eliminate the cause of the error and then
   turn the power back on.

- Items with a "***" in the "Page" column should only be checked by a qualified technician.
- For items with "****" appearing in the "Page" column, ask the place of purchase for advice.
