Please read this manual before using the machine.
Please keep this manual within easy reach for quick reference.

SINGLE NEEDLE DIRECT DRIVE LOCK STITCHER WITH ELECTRONIC FEEDING SYSTEM AND THREAD TRIMMER
Thank you very much for buying a BROTHER sewing machine. Before using your new machine, please read the safety instructions and the explanations given in the instruction manual.

With industrial sewing machines, it is normal to carry out work while positioned directly in front of moving parts such as the needle and thread take-up, and consequently there is always a danger of injury that can be caused by these parts. Follow the instructions from training personnel and instructors regarding safe and correct operation before operating the machine so that you will know how to use it correctly.
SAFETY INSTRUCTIONS

[1] Safety indications and their meanings
This instruction manual and the indications and symbols that are used on the machine itself are provided in order to ensure
safe operation of this machine and to prevent accidents and injury to yourself or other people.
The meanings of these indications and symbols are given below.

Indications

|          | The instructions which follow this term indicate situations where failure to follow the

Symbols

![DANGER] . . . . This symbol ( ▲ ) indicates something that you should be careful of. The picture inside the triangle
indicates the nature of the caution that must be taken.
(For example, the symbol at left means “beware of injury”.)

![WARNING] . . . . This symbol ( ○ ) indicates something that you must not do.

![CAUTION] . . . . This symbol ( ● ) indicates something that you must do. The picture inside the circle indicates the
nature of the thing that must be done.
(For example, the symbol at left means “you must make the ground connection”.)
2 Notes on safety

⚠️ DANGER

Wait at least 5 minutes after turning off the power switch and disconnecting the power cord from the wall outlet before opening the cover of the control box. Touching areas where high voltages are present can result in severe injury.

⚠️ WARNING

Do not allow any liquids to get onto this sewing machine, otherwise fire, electric shocks or operating problems may occur.

If any liquid gets inside the sewing machine (machine head or control box), immediately turn off the power and disconnect the power plug from the electrical outlet, and then contact the place of purchase or a qualified technician.

⚠️ CAUTION

Environmental requirements

Use the sewing machine in an area which is free from sources of strong electrical noise such as electrical line noise or static electric noise. Sources of strong electrical noise may cause problems with correct operation.

Any fluctuations in the power supply voltage should be within ±10% of the rated voltage for the machine. Voltage fluctuations which are greater than this may cause problems with correct operation.

The power supply capacity should be greater than the requirements for the sewing machine’s power consumption. Insufficient power supply capacity may cause problems with correct operation.

The ambient temperature should be within the range of 5°C to 35°C during use. Temperatures which are lower or higher than this may cause problems with correct operation.

The relative humidity should be within the range of 45% to 85% during use, and no dew formation should occur in any devices. Excessively dry or humid environments and dew formation may cause problems with correct operation.

In the event of an electrical storm, turn off the power and disconnect the power cord from the wall outlet. Lightning may cause problems with correct operation.

Do not connect anything to the USB port other than the USB memory. If this is not observed, problems with operation may result.

Installation

Machine installation should only be carried out by a qualified technician.

Contact your Brother dealer or a qualified electrician for any electrical work that may need to be done.

The sewing machine weighs approximately 34.5 kg (76lb). The installation should be carried out by two or more people.

Do not connect the power cord until installation is complete. The machine may operate if the treadle is depressed by mistake, which could result in injury.

Turn off the power switch before inserting or removing the plug, otherwise damage to the control box could result.

Be sure to connect the ground. If the ground connection is not secure, you run a high risk of receiving a serious electric shock, and problems with correct operation may also occur.

When securing the cords, do not bend the cords excessively or fasten them too hard with staples, otherwise there is the danger that fire or electric shocks could occur.

If using a work table which has casters, the casters should be secured in such a way so that they cannot move.

Secure the table so that it will not move when tilting back the machine head. If the table moves, it may crush your feet or cause other injuries.

Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.

Be sure to wear protective goggles and gloves when handling the lubricating oil and grease, so that they do not get into your eyes or onto your skin, otherwise inflammation can result. Furthermore, do not drink the oil or eat the grease under any circumstances, as they can cause vomiting and diarrhea. Keep the oil out of the reach of children.
## CAUTION

### Sewing

- This sewing machine should only be used by operators who have received the necessary training in safe use beforehand.
- The sewing machine should not be used for any applications other than sewing.
- Be sure to wear protective goggles when using the machine.
- If goggles are not worn, there is the danger that if a needle breaks, parts of the broken needle may enter your eyes and injury may result.
- Turn off the power switch at the following times. The machine may operate if the treadle is depressed by mistake, which could result in injury.
  - When threading the needle
  - When replacing the bobbin and needle
  - When not using the machine and when leaving the machine unattended
- If using a work table which has casters, the casters should be secured in such a way so that they cannot move.
- Attach all safety devices before using the sewing machine. If the machine is used without these devices attached, injury may result.
- Do not touch any of the moving parts or press any objects against the machine while sewing, as this may result in personal injury or damage to the machine.
- Secure the table so that it will not move when tilting back the machine head. If the table moves, it may crush your feet or cause other injuries.
- Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.
- If an error occurs in machine operation, or if abnormal noises or smells are noticed, immediately turn off the power switch. Then contact your nearest Brother dealer or a qualified technician.
- If the machine develops a problem, contact your nearest Brother dealer or a qualified technician.
- Do not hold the machine head by the panel when tilting it back or returning it to its original position. If this is not observed, it may result in serious injury or damage to the sewing machine.

### Cleaning

- Turn off the power switch before carrying out cleaning. The machine may operate if the treadle is depressed by mistake, which could result in injury.
- Secure the table so that it will not move when tilting back the machine head. If the table moves, it may crush your feet or cause other injuries.
- Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.
- Be sure to wear protective goggles and gloves when handling the lubricating oil and grease, so that they do not get into your eyes or onto your skin, otherwise inflammation can result.
- Furthermore, do not drink the oil or eat the grease under any circumstances, as they can cause vomiting and diarrhea.
- Keep the oil out of the reach of children.
- Do not hold the machine head by the panel when tilting it back or returning it to its original position. If this is not observed, it may result in serious injury or damage to the sewing machine.
**CAUTION**

**Maintenance and inspection**

Maintenance and inspection of the sewing machine should only be carried out by a qualified technician.

Ask your Brother dealer or a qualified electrician to carry out any maintenance and inspection of the electrical system.

Turn off the power switch and disconnect the power cord from the wall outlet at the following times, otherwise the machine may operate if the treadle is depressed by mistake, which could result in injury.

- When carrying out inspection, adjustment and maintenance
- When replacing consumable parts such as the rotary hook and knife

Always be sure to turn off the power switch and then wait one minute before opening the pulley cover. If you touch the surface of the motor, it may cause burns.

If the power switch needs to be left on when carrying out some adjustment, make sure that you switch the sewing machine to maintenance mode. Pay careful attention to safety.

Secure the table so that it will not move when tilting back the machine head. If the table moves, it may crush your feet or cause other injuries.

Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.

When replacing parts and installing optional accessories, be sure to use only genuine Brother parts. Brother will not be held responsible for any accidents or problems resulting from the use of non-genuine parts.

If any safety devices have been removed, be absolutely sure to re-install them to their original positions and check that they operate correctly before using the machine.

To prevent accidents and problems, do not modify the machine yourself. Brother will not be held responsible for any accidents or problems resulting from modifications made to the machine.

Do not hold the machine head by the panel when tilting it back or returning it to its original position. If this is not observed, it may result in serious injury or damage to the sewing machine.
The following warning labels appear on the sewing machine. Please follow the instructions on the labels at all times when using the machine. If the labels have been removed or are difficult to read, please contact your nearest Brother dealer.

1. Touching areas where high voltages are present can result in severe injury. Turn off the power before opening the cover.

2. Be careful not to get your hands caught when returning the machine head to its original position after it has been tilted.

3. Be careful to avoid injury from the moving thread take-up and pulley.

4. Do not hold. Problems with operation or injury may occur.

5. Be sure to connect the ground. If the ground connection is not secure, you run a high risk of receiving a serious electric shock, and problems with correct operation may also occur.

6. Direction of operation

7. Do not place your hands inside the bottom cover. Problems with operation or injury may occur.

8. Safety devices:
   (A) Finger guard
   (B) Thread take-up cover
   (C) pulley cover

9. Lubricating Oil for Machining

   CAUTION

   Lubricating oil may cause inflammation to eye and skin.
   Wear protective glasses and gloves.
   Swallowing oil can cause diarrhoea and vomiting.
   Do not swallow.

   Keep away from children.

   FIRST AID
   Eye contact: -Rinse with plenty of cold water.
   -Seek medical help.
   Skin contact: -Wash with soap and water.
   If swallowed: -Seek medical help immediately.

(14) Control box
(15) Power indicator
(16) USB port

Safety devices:
(17) Pulley cover
(18) Thread take-up cover
(19) Finger guard
3. INSTALLATION

CAUTION

Machine installation should only be carried out by a qualified technician.

Contact your Brother dealer or a qualified electrician for any electrical work that may need to be done.

The sewing machine weighs approximately 34.5 kg (76lb). The installation should be carried out by two or more people.

Do not connect the power cord until installation is complete. The machine may operate if the treadle is depressed by mistake, which could result in injury.

Secure the table so that it will not move when tilting back the machine head. If the table moves, it may crush your feet or cause other injuries.

Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.

About the machine set-up location

・ Do not set up this sewing machine near other equipment such as televisions, radios or cordless telephones, otherwise such equipment may be affected by electronic interference from the sewing machine.

・ The sewing machine should be plugged directly into an AC wall outlet. Operation problems may result if extension cords are used.

Carrying the machine

・ The sewing machine should be carried by the arm and the pulley cover by two people as shown in the illustration.

* Do not hold by any part other than the pulley cover. If this is not observed, it may result in damage to the sewing machine.

* Do not hold the operation panel.

Tilting back the machine head

・ Hold section (A) with your foot so that the table does not move, and then push the arm with both hands to tilt back the machine head.

* Do not push the operation panel.

Returning the machine head to the upright position

1. Clear away any tools, etc. which may be near the table holes.
2. While holding the face plate with your left hand, gently return the machine head to the upright position with your right hand.

* Do not hold the operation panel.
3. INSTALLATION

3-1. Table processing diagram
- The top of the table should be 40 mm in thickness and should be strong enough to hold the weight and withstand the vibration of the sewing machine.
- Drill holes as indicated in the illustration below.

3-2. Installation

1. Control box
   (1) Control box
   (2) Bolts [4 pcs]
   (3) Washers [2 pcs]
   (4) Nuts [2 pcs]
   (5) Spring washers [2 pcs]
   (6) Washers [2 pcs]
   (7) Bolts (large) [2 pcs]
   (8) Nuts (large) [2 pcs]
   (9) Spring washers (large) [2 pcs]
   (10) Washers (large) [2 pcs]

2. Connecting rod
   (11) Connecting rod
   (12) Nut
3. Rubber cushions
(1) Rubber cushions [2 pcs]

4. Machine head
(1) Hinges [2 pcs]
(2) Machine head
(3) Head rest

NOTE:
・Bind the cords together and pass them through the cord hole.
・Tap the head rest (3) securely into the table hole. If the head rest (3) is not pushed in as far as it will go, the machine head will not be sufficiently stable when it is tilted back.

5. Machine head seal
1. Tilt back the machine head, and then peel off the sticker (1).
2. Peel off the protective sheet (3) from the operation panel (2).
6. Knee lifter plate

<Knee lifter adjustment>
1. Turn the machine pulley so that the feed dog is below the top of the needle plate.
2. Lower the presser foot (1) by using the lifting lever (2).
3. Loosen the nut (3).
4. Turn the screw (5) to adjust so that the amount of play in the knee lifter plate (4) is approximately 10 mm.
5. Securely tighten the nut (3).
6. Loosen the nut (6).
7. Turn the adjusting screw (8) to adjust so that the presser foot (7) is at the desired position within a distance of 16 mm of the needle plate when the knee lifter plate is fully pressed.
8. After adjustment is completed, securely tighten the nut (6).
3-3. Lubrication

**CAUTION**

- Do not connect the power cord until lubrication has been completed, otherwise the machine may operate if the treadle is depressed by mistake, which could result in injury.
- Be sure to wear protective goggles and gloves when handling the lubricating oil and grease, so that they do not get into your eyes or onto your skin, otherwise inflammation can result. Furthermore, do not drink the oil or eat the grease under any circumstances, as they can cause vomiting and diarrhea. Keep the oil out of the reach of children.
- When cutting the nozzle of the oil tank, hold the base of the nozzle securely. If you hold the end of the nozzle, injury from the scissors may result.

The sewing machine should always be lubricated and the oil supply replenished before it is used for the first time, and also after long periods of non-use.

1. Hold the base of the nozzle of the accessory oil tank (1), and use scissors to cut about half-way along the straight section (A) of the nozzle.
2. Loosen and remove the nozzle, and then remove the seal (2).
3. Tighten the nozzle.
4. Open the oil feeding pocket cover (3).
5. Insert the nozzle of the oil tank (1) deeply into the oil feeding pocket (4), and then add about 120 ml of lubricating oil.
6. Check that the oil gauge (6) comes to the upper reference line in the oil gauge window (5).
7. Close the oil feeding pocket cover (3).

**<Lubrication oil replenishment interval>**

Be sure to add more oil if the oil gauge (6) is below the lower reference line.
3-4. Connecting the cords

**CAUTION**

- Contact your Brother dealer or a qualified electrician for any electrical work that may need to be done.
- Do not connect the power cord until all cords have been connected. The machine may operate if the treadle is depressed by mistake, which could result in injury.
- When securing the cords, do not bend the cords excessively or fasten them too hard with staples, otherwise there is the danger that fire or electric shocks could occur.
- Be sure to connect the ground. If the ground connection is not secure, you run a high risk of receiving a serious electric shock, and problems with correct operation may also occur.

3-4-1. Connecting the cords

1. **Harness cover**
   1. Raise the harness cover (1).

2. **Cords (1)**
   1. Harness cover
   2. Sewing machine motor encoder connector 16-pin
   3. Feed motor encoder connector 6-pin
   4. Hand switch connector 12-pin
   5. 10-pin operation panel connector
   6. 10-pin solenoid connector

   1. Pass the cords through the harness cover (1).
   2. Connect the cords to the control box.

**NOTE:**
For Europe specifications, Americas 220V specifications and 100V/400V system specifications, refer to “3-4-2. Other cords.”
3. INSTALLATION

3. Lower the harness cover (1), and then place the harness inside the harness cover.

3. Cords (2)
(1) 4-pin machine motor connector
(2) Feed motor connector 6-pin
(3) 3-pin power connector

4. Ground wire
(1) Ground wire
(2) Screw (Recommended tightening torque 1.0±0.1 N.m)
(3) Power cord

1. Attach an appropriate plug to the power cord (3). (The green and yellow wire is the ground wire.)
2. Insert the power plug into a properly-grounded electrical outlet.

NOTE:
・ Make sure that the ground connections are secure in order to ensure safety.
・ For Europe specifications, Americas 220 V specifications and 100 V/400 V system specifications, refer to “3-4-2. Other cords”.
3. INSTALLATION

3-4-2. Other cords

**DANGER**

Wait at least 5 minutes after turning off the power switch and disconnecting the power cord from the wall outlet before opening the cover of the control box. Touching areas where high voltages are present can result in severe injury.

For Europe specifications, Americas 220V specifications and 100 V/400 V system specifications, connect the cords according to the respective specifications.

**< Europe specifications >**

1. Filter box
2. Screws [4 pcs]
3. Connector
4. CE bush plate
5. Screws [2 pcs]
6. CE D cord cover
7. Screws [2 pcs]
8. Staples [5 pcs]
9. Power cord

1. Attach an appropriate plug to the power cord (9). (The green and yellow wire is the ground wire.)
2. Insert the power plug into a properly-grounded electrical outlet.

**NOTE:**

- Take care when tapping in the staples (8) to make sure that they do not pierce the cords.
- Do not use extension cords, otherwise machine operation problems may result.
3. INSTALLATION

<For 100V/400V system specifications>

(1) Power switch
(2) Screws [2 pcs]
3. INSTALLATION

1. Attach an appropriate plug to the power cord (9). (The green and yellow wire is the ground wire.)
2. Insert the power plug into a properly-grounded electrical outlet.

NOTE:
- Take care when tapping in the staples (7) to make sure that they do not pierce the cords.
- Do not use extension cords, otherwise machine operation problems may result.

(3) Transformer box
(4) Transformer box plates [2 pcs]
(5) Screw [with washer]
(6) 3-pin power supply connector
(7) Staples [5 pcs]
(8) Cord clamps [2 pcs]
(9) Power cord
3. INSTALLATION

<For Americas 220V specifications>
(1) Power switch
(2) Screws [2 pcs]
(3) 3-pin power supply connector
(4) Power cord
(5) Staples [5 pcs]

1. Attach an appropriate plug to the power cord (4). (The green and yellow wire is the ground wire.)
2. Insert the power plug into a properly-grounded electrical outlet.

NOTE:
・ Take care when tapping in the staples (5) to make sure that they do not pierce the cords.
・ Do not use extension cords, otherwise machine operation problems may result.
3-5. Test operation (Operating the treadle)

**CAUTION**

Do not touch any of the moving parts or press any objects against the machine while sewing, as this may result in personal injury or damage to the machine.

1. **Turning on the power**
   
   Press the ON power switch (1).

   The power indicator (2) will illuminate.

   The display (3) of the operation panel will change in the order shown in the illustration. (During this time, the feed mechanism will return to the home position.)
2. Test operation
1. Check that the machine sews at low speed when the treadle (1) is gently pressed to position (B).
2. Then check that it sews at high speed when the treadle (1) is gently pressed to position (C).
3. After pressing the treadle (1) forward, check that the needle is lowered to the top of the needle plate when the treadle (1) is returned to the neutral position (A). (when needle down stopping has been set.)
4. If the treadle (1) is pressed to position (D), thread trimming is carried out and the needle then rises above the needle plate and stops.

3-6. Adjusting the treadle

<Forward depression sensitivity adjustment>
If the machine starts running at low speed when your foot is simply resting on the treadle, or if the treadle pressure is felt to be too weak, adjust the position (a to c) at which the treadle spring (1) is hooked onto the treadle lever (2).
* a is the weakest position, and it becomes gradually stronger at b, c and d respectively.

<Backward depression sensitivity adjustment>
1. Loosen the nut (3) and turn the bolt (4).
* When the bolt (4) is tightened, the treadle operation becomes heavier, and when it is loosened, the operation becomes lighter.
2. Tighten the nut (3).

<Adjusting the treadle stroke>
Remove the nut (5), and then move the connecting rod joint (6) from the position in figure A to the position in figure B. The treadle stroke will then be increased by approximately 27%.
At this time, the treadle forward and backward depression sensitivity will change, so readjust if necessary.
4. PREPARATION BEFORE SEWING

4-1. Installing the needle

CAUTION

Turn off the power switch before installing the needle. The machine may operate if the treadle is depressed by mistake, which could result in injury.

1. Turn the machine pulley to move the needle bar to its highest position.
2. Loosen the screw (1).
3. Insert the needle (2) in a straight line as far as it will go, making sure that the long groove on the needle is at the left, and then securely tighten the screw (1).

4-2. Removing the bobbin case

CAUTION

Turn off the power switch before removing the bobbin case. The machine may operate if the treadle is depressed by mistake, which could result in injury.

1. Turn the machine pulley to raise the needle until it is above the needle plate.
2. Pull the latch (1) of the bobbin case upward and then remove the bobbin case.
3. The bobbin (2) will come out when the latch (1) is released.

* There is an anti-spin spring (3) inside the bobbin case. The anti-spin spring (3) prevents the bobbin from racing at times such as during thread trimming.
* Use bobbins (2) made of light alloy as specified by BROTHER.
4-3. Winding the lower thread

**CAUTION**

Do not touch any of the moving parts or press any objects against the machine while winding the lower thread, as this may result in personal injury or damage to the machine.

1. Turn on the power switch.
2. Place the bobbin (1) onto the bobbin winder shaft (2).
3. Wind the thread several times around the bobbin (1) in the direction indicated by the arrow.
4. Push the bobbin presser arm (3) toward the bobbin(1).
5. Raise the presser foot with the lifting lever.
6. Depress the treadle. Lower thread winding will then start.
7. Once winding of the lower thread is completed, the bobbin presser arm (3) will return automatically.
8. After the thread has been wound on, remove the bobbin and cut the thread with the knife (4).

* Loosen the screw (5) and move the bobbin presser (6) to adjust the amount of thread wound onto the bobbin.

**NOTE:**
The amount of thread wound onto the bobbin should be a maximum of 80 % of the bobbin capacity.

4-4. Installing the bobbin case

**CAUTION**

Turn off the power switch before installing the bobbin case. The machine may operate if the treadle is depressed by mistake, which could result in injury.

1. Turn the machine pulley to raise the needle until it is above the needle plate.
2. While holding the bobbin so that the thread winds to the right, insert the bobbin into the bobbin case.
3. Pass the thread through the slot (1) and under the tension spring (2), and then pull it out from the thread guide (3).
4. Check that the bobbin turns clockwise when the thread is pulled.
5. Hold the latch (4) on the bobbin case and insert the bobbin case into the rotary hook.
4-5. Threading the upper thread

**CAUTION**

Turn off the power switch before threading the upper thread. The machine may operate if the treadle is depressed by mistake, which could result in injury.

Turn the machine pulley and raise the thread take-up (1) before threading the upper thread. This will make threading easier and it will prevent the thread from coming out at the sewing start.

25 - 30mm (Reference value: #60 spun thread)
4-6. Using the knee lifter

The presser foot (2) can be raised by pressing the knee lifter plate (1).
5. USING THE OPERATION PANEL (BASIC OPERATIONS)

5-1. Names and functions

(1) Menu key
This key is used to move to the menu screen.

(2) Home key
This key is used to return to the home screen.

(3) Half stitch key
When the sewing machine is stopped, the needle bar can be moved up and down by pressing this key.

(4) Touch panel (display)
This displays messages and touch keys (icons).

5-2. Home screen

- The home screen is displayed when the power is turned on.
- Sewing operations are normally carried out while the home screen is displayed.
- The home screen can be switched between the detailed home screen and the simple home screen.
  "At the time of shipment from the factory, the detailed home screen is set to be displayed."
  "If you keep pressing the key while the home screen is displayed, you can switch between the detailed home screen and the simple home screen. Furthermore, you can return to the home screen from any other screen by pressing the key."
### 5-2-1. Description of detailed home screen

<table>
<thead>
<tr>
<th>No.</th>
<th>Description</th>
<th>Function Details</th>

</table>
5-2-2. Description of simple home screen

*(1) Screen lock key*  Press this key to switch the home screen between locked and unlocked.

*NOTE:* At the time of shipment from the factory, the screen is set to lock automatically if no operations are carried out for one minute. (Refer to memory switch MSW-310.)

*Screen unlock key*  Press this key to switch the illumination LED between on and off.

*(2) Illumination LED on key*  Press this key to switch the illumination LED between on and off.

*Illumination LED off key*  If you keep pressing this key, the display switches to the illumination LED brightness setting screen.

*(3) Program No. UP key*  Press this key to increase the program number.

*Program No. DOWN key*  Press this key to decrease the program number.

*(4) Main stitch pitch key*  If you keep pressing this key, the display switches to the stitch pitch setting screen.

*(5) Main sewing speed key*  If you keep pressing this key, the display switches to the main sewing speed setting screen.

*(6) Production counter key*  If you keep pressing this key while the production counter is displayed, the display switches to the production counter setting screen.

*(7) Lower thread counter key*  If you keep pressing this key while the production counter is displayed, the display switches to the production counter setting screen.

*(8) Shortcut 1 key*  This key is set to operate as a “Start backtack key” at the time of shipment from the factory.

*(9) Shortcut 2 key*  This key is set to operate as an “End backtack key” at the time of shipment from the factory.

*(10) Shortcut 3 key*  This key is set to operate as a “Slow start key” at the time of shipment from the factory.

*(11) Shortcut 4 key*  This key is set to operate as a “Thread trimming lock key” at the time of shipment from the factory.

* The assignments for shortcut keys 1 to 4 can be changed. (Refer to “6-5. Assigning functions to shortcut keys”.)
5. USING THE OPERATION PANEL (BASIC OPERATIONS)

5-2-3. Types of icons

The icons which appear in the display can be broadly classified into the following three types.

Type A: Simple symbols

<table>
<thead>
<tr>
<th>Type A: Simple symbols</th>
<th>Warning symbol</th>
<th>USB connector</th>
<th>Current program No.</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><img src="image" alt="Warning symbol" /></td>
<td><img src="image" alt="USB connector" /></td>
<td><img src="image" alt="Current program No." /></td>
</tr>
</tbody>
</table>

Type B: Plain touch keys (symbol is always fixed)

<table>
<thead>
<tr>
<th>Type B: Plain touch keys</th>
<th>Return key (Returns to the previous screen)</th>
<th>+ key (Increases a value)</th>
<th>OK key (Confirms a value)</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td><img src="image" alt="Return key" /></td>
<td><img src="image" alt="+ key" /></td>
<td><img src="image" alt="OK key" /></td>
</tr>
</tbody>
</table>

Type C: Touch keys which change their setting status (symbol) each time they are touched

<table>
<thead>
<tr>
<th>Type C: Touch keys</th>
<th>Lock key</th>
<th>Thread wiper key</th>
<th>Start backtrack key</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unlocked</td>
<td><img src="image" alt="Unlocked" /></td>
<td><img src="image" alt="Thread wiping enabled" /></td>
<td><img src="image" alt="Start backtack enabled" /></td>
</tr>
<tr>
<td>Locked</td>
<td><img src="image" alt="Locked" /></td>
<td><img src="image" alt="Thread wiping disabled" /></td>
<td><img src="image" alt="Start backtack disabled" /></td>
</tr>
</tbody>
</table>
5-3. Menu screen

- Press the [N] key at any screen to return to the home screen.
- The menu screen consists of the following five screens.
- Press the [A] or [D] key at a menu screen to change the screen.

<table>
<thead>
<tr>
<th>Menu</th>
<th>1st page</th>

</thead>
<tbody>
<tr>
<td></td>
<td>Trouble shooting</td>
</tr>
</tbody>
</table>
5-4. Program setting method

- It is recommended that you register patterns that are sewn frequently as programs. After programs have been registered, you can retrieve the desired sewing patterns simply by selecting a program number, which eliminates the need to set the pattern each time.
- Settings such as sewing pattern, number of stitches, stitch pitch, sewing speed and slow start can be made separately for each program number.
- Up to nine programs from P1 to P9 can be registered.
  * At the time of shipment from the factory, P1 to P8 have normal sewing programs registered, and P9 has a 4-step fixed stitch sewing (name label sewing) program registered.

5-4-1. Program structure

- A single program consists of start backtack parameters, main sewing parameters, end backtack parameters and individual functions for that program.

Programs P1 to P9

Start backtack
- Start backtack sewing parameters

Main sewing
- Main sewing parameters (step 1)
- Main sewing parameters (step 2)
- Main sewing parameters (step 3)
- ………
- Main sewing parameters (step 20)

End backtack
- End backtack sewing parameters

Program individual functions
## 5. USING THE OPERATION PANEL (BASIC OPERATIONS)

### (1) Start backtack sewing parameters

<table>
<thead>
<tr>
<th>Setting value</th>
<th></th>
</tr>
</thead>
</table>
| Start backtack sewing pattern | ![](image)
| Sewing speed | 220 - 3000 sti/min |
| No. of stitches A | 1 - 19 stitches |
| No. of stitches B | 1 - 19 stitches |
| Stitch pitch | -3 specifications: 0.05 - 5.00 mm  
-5 specifications: 0.05 - 5.00 mm |

### (2) Main sewing parameters

<table>
<thead>
<tr>
<th>Setting value</th>
<th></th>
</tr>
</thead>
</table>
| Main sewing pattern | Normal sewing  
Fixed stitch sewing  
Reverse fixed stitch sewing  
Pleat presser sewing  
Continuous backtacking |
| Sewing speed | -3 specifications: 220 - 5000 sti/min  
-5 specifications: 220 - 4500 sti/min |
| No. of stitches E | 1 - 255 stitches |
| No. of stitches F | 1 - 19 stitches |
| No. of stitches A | 0 - 19 stitches |
| No. of stitches B | 1 - 19 stitches |
| No. of stitches C | 1 - 19 stitches |
| No. of stitches D | 0 - 19 stitches |
| Stitch pitch | -3 specifications: 0.05 - 5.00 mm, DS1 - DS5 (design stitches)  
-5 specifications: 0.05 - 5.00 mm, DS1 - DS5 (design stitches) |

### (3) End backtack sewing parameters

<table>
<thead>
<tr>
<th>Setting value</th>
<th></th>
</tr>
</thead>
</table>
| End backtack sewing pattern | ![](image)
| Sewing speed | 220 - 3000 sti/min |
| No. of stitches C | 1 - 19 stitches |
| No. of stitches D | 1 - 19 stitches |
| Stitch pitch | -3 specifications: 0.05 - 5.00 mm  
-5 specifications: 0.05 - 5.00 mm |
### (4) Program individual functions

<table>
<thead>
<tr>
<th>Function</th>

</table>

**PFM**: Performance  
**T/T**: Thread Trimming  
**X-over**: Cross-over
5-4-2. Start backtack settings

1. Switching to start backtack setting mode

   For the detailed home screen
   If you keep pressing the start backtack key, the display switches to the start backtack setting screen.

   For the simple home screen
   If you keep pressing the start backtack key, the display switches to the start backtack setting screen.

   * Refer to section 6-5 for details on assigning functions to the shortcut keys.

   For the menu screen
   Select "Front BT setting" to switch to start backtack setting mode.

2. Set the start backtack sewing parameters.
   (1) Press the [ ] or [ ] key to select the start backtack pattern.
   (2) Press the stitch number key to select the number of stitches.
   Use the + and - keys to change the number of stitches.
   (3) Press the stitch pitch key to select the stitch pitch.
   Use the + and - keys to change the value.
   (4) Press the sewing speed key to select the start backtack sewing speed.
   Use the + and - keys to change the value.

3. Press the home key to return to the home screen.
   Press the return key to return to the menu screen (or the home screen).
   * The settings which are made here are applied to the start backtack key in the home screen.

5-4-3. Main sewing settings

1. Switching to main sewing setting mode

   - **For the detailed home screen**
     If you keep pressing the main sewing key, stitch pitch key or sewing speed key, the screen will switch to main sewing setting mode.

   - **For the simple home screen**
     If you keep pressing the stitch pitch key or sewing speed key, the screen will switch to main sewing setting mode.

   - **For the menu screen**
     Select "Main portion setting" to switch to main sewing setting mode.

2. Setting the main sewing parameters.

   (1) Press the [ ] or [ ] key to select the main sewing pattern.
   (2) Press the stitch number key to select the number of stitches.
    Use the + and - keys to change the number of stitches.
   (3) Press the stitch pitch key to select the stitch pitch.
    Use the + and - keys to change the value.
   (4) Press the sewing speed key to select the main pattern sewing speed.
    Use the + and - keys to change the value.

3. Press the home key to return to the home screen.
   Press the return key to return to the menu screen (or the home screen).
   * The settings which are made here are applied to the main sewing key in the home screen.

5-4-4. End backtack settings

1. Switching to end backtack setting mode

For the detailed home screen
If you keep pressing the end backtack key, the display switches to the end backtack setting screen.

For the simple home screen
If you keep pressing the end backtack key, the display switches to the end backtack setting screen.

* Refer to section 6-5 for details on assigning functions to the shortcut keys.

For the menu screen
Select "End BT setting" to switch to end backtack setting mode.

2. Set the end backtack sewing parameters.

   (1) Press the \[ ] or [ ] key to select the end backtack pattern.
   (2) Press the stitch number key to select the number of stitches.
       Use the + and - keys to change the number of stitches.
   (3) Press the stitch pitch key to select the stitch pitch.
       Use the + and - keys to change the value.
   (4) Press the sewing speed key to select the end backtack sewing speed. Use
       the + and - keys to change the value.

3. Press the home key to return to the home screen.
Press the return key to return to the menu screen (or the home screen).

   * The settings which are made here are applied to the end backtack key in the home screen.

5-5. Using program individual functions and program common functions

- In addition to start backtack sewing, main sewing and end backtack sewing, the following 9 types of functions are also included in the parameters which are necessary for sewing. Needle up/down, thread trimming lock, thread wiping, correction sewing, AUTO, slow start, special locus, best PFM mode, auto X-over seam assist mode.
- Of these 9 types of functions, the functions which can be set separately for each program are called “program individual” functions.
  * When an assignment is made to a program individual function, a “P” symbol appears in the top-left corner of the icon. On the other hand, the functions which can be set in common for all programs (P1 to P9) are called “program common” functions.

- Each of the 9 types of functions can be set to be used as either a program individual function or a program common function. (Memory switches MSW-301 to MSW-309)

At the time of shipment from the factory, the settings are as follows.

<table>
<thead>
<tr>
<th>Function</th>
<th>Program individual functions</th>
<th>Program common function</th>
</tr>
</thead>
<tbody>
<tr>

</tbody>
</table>
5-5-4. Correction sewing

Correction sewing operation can be set.

| Setting details | 
|-----------------|---|
| Correction sewing operation using the hand switch is disabled. | 
| **NOTE:** Operating the hand switch may result in an operation other than correction sewing being carried out. * The operation mode can be changed to a different mode from correction sewing. (Refer to "6-10. Hand switches"). |
| Correction sewing operation using the hand switch is enabled. If the sewing machine is stopped, sewing will be carried out at slow speed while the hand switch is being pressed. * The operation mode can be changed to correction sewing. (Refer to "6-10. Hand switches"). |

5-5-5. AUTO

Automatic sewing and thread trimming operations can be set. However, they can only be set in conjunction with continuous backtack sewing and fixed stitch sewing.

| Setting details |
|-----------------|---|
| Automatic sewing is not carried out, and sewing stops when the treadle is returned to the neutral position. |
| Sewing is carried out automatically for the number of stitches which have been set (start and end backtacking and fixed stitch sewing) simply by depressing the treadle once. After sewing is complete, depress the treadle backward to carry out thread trimming. |
| Sewing is carried out automatically for the number of stitches which have been set (start and end backtacking, fixed stitch sewing, thread trimming) simply by depressing the treadle once. After sewing is complete, thread trimming is carried out automatically. |
5-5-6. Slow start

The slow start pattern at the sewing start after thread trimming can be set.

<table>

</tbody>
</table>
5-6. Using the production counter

- The production counter can be used to let you know how many items have been sewn.
- The production counter increases by 1 each time thread trimming is carried out.

1. Switching to production counter editing mode

   **For the detailed home screen**
   Set the counter display so that it is displaying the production counter icon, and then keep pressing the production counter key to switch to production counter editing mode.

   **For the simple home screen**
   Keep pressing the production counter key to switch to production counter editing mode.

   **For the menu screen**
   Select "Production counter editing" to switch to the production counter editing screen.

2. Use the + and - keys to change the value of the production counter (1). When the value is changed, the production counter (1) will flash.
   - If you would like to return the setting to "0000", press the Clear key.
   - If you press the OK key, the value will be confirmed and the display will return to the home screen.
5-7. Using the lower thread counter

- The lower thread counter can be used to let you know approximately how much lower thread is remaining.
- The lower thread counter should be used as a guide only.
- The value displayed by the lower thread counter display is reduced by 0.1 from the initial setting value each time the number of stitches x sewing pitch reaches 0.1 m, and a warning is given when the counter goes below 0.

1 Switching to lower thread counter setting mode

For the detailed home screen
Set the counter display so that it is displaying the lower thread counter icon, and then keep pressing the lower thread counter key to switch to lower thread counter setting mode.

For the simple home screen
Keep pressing the lower thread counter key to switch to lower thread counter setting mode.

For the menu screen
Select "Bobbin thread counter setting" to switch to lower thread counter setting mode.

2

- You can use the ON/OFF key to turn the counter function on and off.
  * When the function is turned off, "---" will appear in the counter display (1) and the counter will not operate while sewing is carried out.
- Use the + and - keys to set the value for the lower thread counter. When the value is changed, the lower thread counter (1) will flash. The setting range is from 0.1 to 99.9 m.
- You can press the Reset key to provisionally reset the value to the one which was set previously (only if the counter function was turned on).
- If you press the OK key, the value will be confirmed and the display will return to the home screen.
<Lower thread counter operation>

When sewing is carried out, the value shown in the lower thread counter display is reduced by 0.1 each time the number of stitches x sewing pitch reaches 0.1 m. However, the display is only updated when the treadle is returned to the neutral position.

<Lower thread out warning when sewing stops (before thread trimming)>

1. If the lower thread counter has dropped to below 0 when the sewing machine stops sewing, the warning buzzer sounds 5 times (1 second on/1 second off), and a lower thread counter warning message is displayed.
   * Sewing will not be possible even if the treadle is depressed forward.
2. <If replacing the bobbin>
   (1) Depress the treadle backward to trim the thread.
   (2) Replace the bobbin.
   (3) Press the Reset key.
   * The lower thread counter value will return to the value which was previously set.
3. <If not replacing the bobbin>
   (1) Press the return key.
   * The lower thread counter value will remain unchanged.
3. The display will return to the screen which was being displayed before the lower thread counter out warning appeared, and sewing will be possible.

<Lower thread out warning when sewing is complete (after thread trimming)>

1. If the lower thread counter has dropped to below 0 after sewing is complete, the warning buzzer sounds 5 times (1 second on/1 second off), and a lower thread counter warning message is displayed.
   * Sewing will not be possible even if the treadle is depressed forward.
2. Replace the bobbin.
3. Press the Reset key.
   * The lower thread counter value will return to the value which was previously set.
4. The display will return to the screen which was being displayed before the lower thread counter out warning appeared, and sewing will be possible.
5-8. Home screen mode setting

- You can select from two different types of home screen display: the detailed home screen or the simple home screen.
  * When the home screen is displayed, you can keep pressing the key to switch between home screens.

1. Switching to home screen mode setting mode

   At the menu screen, select "Home screen mode setting" to switch to home screen mode setting mode.

2. Use the + and - keys to set the value (1) for the mode.
   - Press the return key to return to the menu screen.
   - Press the home key to return to the home screen which has been set.
5-9. Illumination LED brightness setting

The brightness of the illumination LED can be set.

1. Switching to illumination LED brightness setting mode

   **For the detailed home screen**
   Keep pressing the "LED brightness" key to switch to illumination LED brightness setting mode.

   **For the simple home screen**
   Keep pressing the "LED brightness" key to switch to illumination LED brightness setting mode.

   **For the menu screen**
   Select "LED brightness setting" to switch to illumination LED brightness setting mode.

2. Use the + and - keys to set the value for the brightness level (1). The setting range is from 1 to 9.
   - Press the home key to return to the home screen.
   - Press the return key to return to the menu screen (or the home screen).
   - Once the value for the brightness level is changed, the status will be displayed when you return to the home screen, even if the status was being displayed previously.
6. USING THE OPERATION PANEL (ADVANCED OPERATIONS)

6-1. Adding and deleting steps

You can put together programs, such as the one shown in the illustration at right for pocket sewing, by registering multiple steps in the main sewing section.

1. **Switching to add/delete step mode**

   1. At the menu screen, select "Program setting" to switch to program setting mode.

   2. Next, in program setting mode, select "Add/Delete step" to switch to add/delete step mode.

2. **<Add/delete step mode>**

   Steps can be added (up to a maximum of 20 steps) to or deleted (to a minimum of 1 step) from the currently-selected program. However, if fixed stitch sewing or reverse fixed stitch sewing is not selected, it will not be possible to switch to this mode.

   - The program number (1), step number (2), sewing pattern and cursor (blue box) for the currently-selected program are displayed.
   - Press the ▲ or ▼ key to change the cursor position.

   ★ **When adding a step**

   Press the + key (3) to add a step after the current cursor position. The sewing pattern for the added step will be the fixed stitch sewing pattern. However, if the number of steps has already reached 20, no further steps can be added.

   ★ **When deleting a step**

   Press the - key (4) to delete the step at the current cursor position. However, if only 1 step is remaining, the delete key will be disabled.

3. **Press the return key to return to the program setting screen.**

   Press the menu key to return to the menu screen.

   Press the home key to return to the home screen.

   * When more than one step had been added for sewing, the number of stitches in the step which is currently being sewn will be completed, and then sewing will continue on to the next step.
6-2. Editing steps

The number of stitches and sewing pitch can be changed separately for each step.

1. Switching to main sewing setting mode

   From the detailed home screen
   - Press the \( \uparrow \) or \( \downarrow \) key to select the step number to be edited.
   - Keep pressing the main sewing key (1) to switch to main sewing setting mode.

   From add/delete step mode
   - Press the \( \uparrow \) or \( \downarrow \) key to display the number of the step to be edited.
   - Press the pattern (2) for the step number to be edited to switch to main sewing setting mode.

2. Set the main sewing parameters.

   (1) Press the \( \uparrow \) or \( \downarrow \) key to select the main sewing pattern.
   (2) Press the stitch number key to select the number of stitches.
       Use the + and - keys to change the number of stitches.
   (3) Press the stitch pitch key to select the stitch pitch. Use the + and - keys to change the value.
   (4) Press the sewing speed key to select the main pattern sewing speed.
       Use the + and - keys to change the value.
   (5) Press the link key to switch linking between enabled and disabled.

3. Press the return key to return to the previous screen.

6-3. Sewing start step setting

If sewing is interrupted by a problem such as a thread breakage occurring and you need to resume sewing from the point where sewing was interrupted, you can start sewing from the middle of a step.

1. **Switching to sewing start step setting mode**
   - At the detailed home screen, press the menu key.
   - At the menu screen, select "Program setting" to switch to program setting mode.
   - Next, in program setting mode, select "Step setting for start" to switch to sewing start step setting mode.

2. • Select the step number for the step where you would like sewing to start from.

3. • The step number (1) for starting sewing will be displayed.
   • Depress the treadle to start sewing from that step. When sewing is finished, the sewing start step number (1) is cleared and the display returns to the normal detailed home screen.
   * If the program number is changed or the power is turned off and back on, the sewing start step number (1) will be cleared even if sewing is not carried out.
6-4. Program copy

To create a program with parameters that are almost exactly the same as those of another program, you can copy the original program and change just the parts which need to be changed.

1. **Switching to program copy mode**
   - At the menu screen, select "Program setting" to switch to program setting mode.

2. **After switching to program copy mode**, the program number which is currently selected is displayed as the copying source program number (1) and as the copying destination program number (2).
   - Press the ◀ or ▶ key (3) to select the copying source program number (1).
   - Press the ◀ or ▶ key (4) to select the copying destination program number (2).
   - When you press the OK key, the program will be copied.
     * At this time, the copy destination program number will be the program number which is currently selected.

3. **Press the return key** to return to the program setting screen.
   **Press the menu key** to return to the menu screen.
6-5. Shortcut key assignment method

You can assign functions to the 4 shortcut keys which are displayed on the simple home screen. Initially, the start backtrack key, end backtrack key, slow start key and thread trimming lock key are assigned.

**1.** At the menu screen, select "Short cut key setting" to switch to shortcut key setting mode.

**2.**

- **<Shortcut key setting mode (key selection)>**
  1. At the shortcut key setting mode (key selection) screen, select the shortcut key (1 to 4) which you would like to assign a function to.

- **<Shortcut key setting mode (function selection)>**
  2. At the shortcut key setting mode (function selection) screen, select the function which you would like to assign to the shortcut key. The currently-selected icon will be enclosed in a blue box.

**3.** After a shortcut key has been assigned, press the home key to return to the simple home screen. The icon for the function which has been assigned to the shortcut key will be displayed in this screen.
6-6. Design stitch registration method

Up to 5 different types of design stitches (DS-1 to DS-5), each one consisting of several different pitch groups (up to a maximum of 8 groups), can be registered. A single group can be set to contain up to a maximum of 20 stitches with the same stitch pitch. This section shows an example of how to register a design stitch which contains the following eight kinds of stitches into DS-1.

1. Switching to add/delete step mode

   1. At the menu screen, select "Design stitch registration" to switch to the design stitch registration (number selection) screen.

   2. Next, select the design stitch number to be registered from DS-1 to DS-5.
**6. USING THE OPERATION PANEL (ADVANCED OPERATIONS)**

### Design Stitch Registration (Content Setting) Screen

The design stitch number (1) to be registered will be displayed.

1. Press the ◀ or ▶ key to change the group number (1).
2. Press the + or - key to set the stitch pitch (2) for group 1 to 1.00 mm.
   - The stitch pitch can be set to between 0.05 mm and 5.00 mm.
   - The initial setting is 2.00 mm.
3. Touch the number of stitches (3) for group 1.
   - The number of stitches can be set to between 0 and 20 stitches.
   - The initial setting is 1 stitch.
4. Press the + or - key to change the number of stitches (3) for group 1 to 3 stitches.
5. Change the following in the same way.
   - For group 2, set the sewing pitch (4) to 2.00 mm and the number of stitches (5) to 2;
   - For group 3, set the sewing pitch (6) to 4.00 mm and the number of stitches (7) to 1;
   - For group 4, set the sewing pitch (8) to 2.00 mm and the number of stitches (9) to 2;
   - For group 5, change the number of stitches (10) to "-" (no stitches).
   - * If the number of stitches is set to "-", all of the subsequent numbers of stitches will be set to "-".
6. Press the return key to return to the design stitch registration (number selection) screen.
   - Press the menu key to return to the menu screen.
   - Press the home key to return to the home screen.

★ In order to sew design stitches, it is necessary to put the design stitches registered above into a program.

1. At the home screen, select the desired program number.
2. The display will switch to the main sewing setting screen.
3. Select the stitch pitch, and then press the + or - key to set the desired design stitch.
   - * For DS1 to DS5, the maximum stitch pitch is displayed as follows.
4. Press the home key to return to the home screen.
6-7. Working pace setting method

- The target counter can be used to let you know the state of work progress.
- The target counter increases by 1 each time the time set as the working pace has elapsed. However, counting is not carried out during the period from when the power is turned on until sewing starts.

**1 Switching to working pace setting mode**

- In production counter editing mode, press the key to switch to working pace setting mode.
- The target counter cannot be edited. The target counter can be reset to "0000" only by clearing the production counter.

**2 Working pace setting mode**

- In this mode, you can set the pace at which the target counter increases.
- If the operating status (1) for the target counter is set to OFF, the target counter function will not operate. It will not be possible to set the working pace at this time either.

- Press the key (1) to set the operating status to so that the working pace can be set.

**3 The working pace (2) will be displayed. The working pace can be set to between 00'01" and 59'59".**

- Press the + key to increase the value, and press the - key to decrease the value. If the setting is changed to a value which is different to the value which was set previously, the time display will flash. If you would like to return the setting to the value which was set previously, press the Reset key.

**4 Exiting working pace setting mode**

- To confirm the setting and exit, press the OK key. The working pace will be confirmed and the mode will return to production counter setting mode.
- To exit without confirming the setting, press the return key. The mode will return to production counter editing mode.
6-8. Memory switch setting method (Standard)

- The settings for the memory switches are valid for all programs.

1. **Switching to memory switch setting mode (Standard)**

   At the menu screen, select "Memory switch setting" to switch to memory switch setting mode.

2. **Memory switch setting mode**

   1. Press the < or > key to select the memory switch number (1).
      At this time, keep pressing the half stitch key and then press the < or > key at the same time to select only the memory switches with current values that are different from their initial values.

   2. Press the ▼ or ▲ key to change the memory switch value (2).
      If the value that is displayed is different from the value that is currently set, the value in the display will flash.
      If you would like to return the setting to the initial value, press the Reset key.
      * The Reset key is only displayed when the setting value (the value being displayed) is different from the initial value.

   3. Press the OK key to store the memory switch setting. The setting display will change from flashing to illuminated.

3. **Memory switch setting mode exiting method**

   Press the return key to return to the menu screen.
### 6-9. List of memory switch settings

Presser foot lifter and treadle settings (001 to 099)

* These settings are enabled when the correction sewing icon is turned off ( " " ).
6-10-1. Hand switch function setting

1. **Switching to hand switch setting mode**
   
   At the menu screen, select "Hand switch setting" to switch to hand switch setting mode.

2. **Select the desired menu.**
   
   For example, to set hand switch A so that it operates as a correction sewing switch:
   1. Select "Hand switch A function setting".
   2. Next, select "Correction sewing function".

3. **Press the or key to select the desired setting.**
   
   - Press the return key to return to the previous screen.
   - Press the menu key to return to the menu screen.
6-10-2. 2nd correction pitch setting
Normally, correction sewing is carried out at the currently-set sewing pitch. However, when "Correction sewing at 2nd correction pitch" is set for carrying out correction sewing, then correction sewing is carried out at the pitch which is set below.

1. Switching to correction 2nd pitch ratio screen
   At the hand switch setting screen, select "Correction 2nd pitch ratio".

2. Use the + or - key to set the ratio (1) with respect to the current pitch.
   The setting range is from 10% to 250%.
   - Press the return key to return to the previous screen.
   - Press the menu key to return to the menu screen.

6-10-3. 2nd pitch setting
If "2nd pitch" has been set and the hand switch is pressed during sewing, the stitch pitch will change to the pitch set as follows.

1. Switching to 2nd pitch ratio screen
   At the hand switch setting screen, select "2nd pitch ratio".

2. Use the + or - key to set the ratio (1) with respect to the current pitch.
   The setting range is from 10% to 250%.
   - Press the return key to return to the previous screen.
   - Press the menu key to return to the menu screen.
6-11. Reading and writing data using USB media

Programs and memory switch data can be copied between sewing machines by means of USB media.

**CAUTION**

Do not connect anything to the USB port other than the USB memory. If this is not observed, problems with operation may result.

1. **Switching to USB media read/write mode**
   1. First connect the USB media to the sewing machine.
   2. At the menu screen, select "USB media read/write" to switch to USB media read/write mode.

* Multi card readers may not be recognized correctly.

2. **USB media read/write mode**
   1. The currently-selected read/write item and illustration are displayed, so press the ← or → key to change the read/write item.
   2. Press the OK key to run the selected read/write item. The read/write in progress screen will be displayed.

* If no USB media is connected at this time, the message "USB media can not be detected." will be displayed.

- Press the return key to return to the setting menu.

The read/write items that can be selected are as follows.

<table>
<thead>
<tr>
<th>Code</th>

</table>
6-12. Resetting all settings to their defaults

If the sewing machine stops operating normally, the cause may be that an incorrect setting may have been made for the memory data by means of memory switches, for instance. In such cases, it may be possible to restore normal operation by following the steps given below to initialize the stored data.

<table>
<thead>
<tr>
<th>1</th>
<th>Switching to initialization mode and initialization method</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. While pressing the home key, turn on the power to switch to the initialization menu screen.</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>2</th>
<th>To exit from the initialization menu screen</th>
</tr>
</thead>
<tbody>
<tr>
<td>At the initialization menu screen, press the home key to close the initialization menu and switch to the home screen.</td>
<td></td>
</tr>
</tbody>
</table>

1. Switching to initialization mode and initialization method

2. At the initialization menu screen, you can select the items to be initialized.

3. When you select an item to be initialized, the "Are you sure you want to initialize?" confirmation screen will be displayed. Press OK to carry out the initialization. When initialization is complete, the display will return to the initialization menu screen.
7. SEWING

CAUTION

Attach all safety devices before using the sewing machine. If the machine is used without these devices attached, injury may result.

Turn off the power switch at the following times.
- The machine may operate if the treadle is depressed by mistake, which could result in injury.
  - When threading the needle
  - When replacing the bobbin and needle
  - When not using the machine and when leaving the machine unattended

Do not touch any of the moving parts or press any objects against the machine while sewing, as this may result in personal injury or damage to the machine.

Secure the table so that it will not move when tilting back the machine head. If the table moves, it may crush your feet or cause other injuries.

Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.

7-1. Sewing

1. Press the power ON switch (1).
   The power indicator (2) will illuminate.
2. Carry out the programming which is necessary for sewing.
   (Refer to “Using the operation panel”.)
3. Depress the treadle to start sewing.

7-2. Using the thread wiper

1. Press the thread wiper key (1) so that it illuminates.
2. The thread wiper (2) will operate after the thread is trimmed.
7. SEWING

Screens where sewing is possible
If the treadle is depressed while any of the following screens are displayed, the sewing machine will operate. Be careful not to depress the treadle by mistake.

![Sewing Machine Screens](image)

7-3. Backtacking

When hand switch B (1) is pressed during sewing, the feed direction will be reversed. When it is released, the feed direction will return to normal.

* Hand switch B (1) can be set to carry out various different operations. (Refer to "6-10. Hand switches".)
7-4. Sewing condensed stitches

- If you press hand switch A (1) while sewing is in progress, you can sew stitches (forward direction) with small stitch lengths.
- The stitch pitch can be changed to between the main stitch pitch and the main reverse stitch pitch depending on how far it is pushed in.
- Hand switch A (1) can be set to carry out various different operations.
  (Refer to "6-10. Hand switches").
8. NEW FUNCTIONS

8-1. Best PFM mode (short trailing length/bird’s nest reduction mode)

This mode reduces the occurrence of bird’s nests at the sewing start, and shortens the length of thread trailing out from the material at the sewing end.

<Setting method>
1. Press the thread wiper key (1), slow start key (2) and best PFM mode key (3) so that the icons shown in the illustration illuminate. (Refer to "5-5-8. Best PFM mode").
2. Adjust the tension for the pre-tension (4) so that the upper thread trailing length is 25 to 30 mm (spun thread) or 28 to 33 mm (polyester thread).

* Reference values for upper thread trailing length
25 - 30mm (For spun thread)
28 - 33mm (For polyester thread)
8-2. Using X-over seam assist mode

The X-over seam sensor reduces the occurrence of tangled threads and broken needles during X-over seam sewing.

<Setting method>

1. Set the thickness of the X-over seam area.
   1-1. Keep pressing the X-over seam assist mode key (1), and then select "X-over detected height" → "Teaching" from the auto X-over seam setting screen.
   1-2. Set the presser foot onto the X-over seam area and then press the OK key.
   1-3. Press the return key.

   * Numeric value input when teaching recognition cannot be performed correctly because of the type of material

2. Set the X-over seam correction value.
   * Only adjust if the stitch pitch is not suitable at +0.
   2-1. Keep pressing the X-over seam assist mode key (1), and then select "X-over seam sewing PARA" from the auto X-over seam setting screen.
   2-2. Select "Feed amount correction on X-over seam", and then set the correction amount. (* The figure is a percentage, so for example, if you set it to "+1", the sewing pitch will increase by 1% of the main sewing pitch.)
   2-3. Select "Feed amount correction at crossing of X-over seam", and then set the correction amount. (* The figure is a percentage, so for example, if you set it to "+1", the sewing pitch will increase by 1% of the main sewing pitch.)
   2-4. Press the return key.
   2-5. Press the X-over seam assist mode key (1) so that the icon illuminates.

NOTE:

If the sewing pitch is incorrect and does not match the X-over seam detection timing, select "X-over seam sewing PARA" and then change the "X-over seam detecting correction" setting.

Set to positive value → Detection timing is advanced
Set to negative value → Detection timing is retarded

If a loud noise is generated, the presser foot may be bouncing. In such cases, increase the presser foot pressure, or adjust the X-over seam detection sensitivity to a negative value.

Setting method:

1. Set the thickness of the X-over seam area.
   1-1. Keep pressing the X-over seam assist mode key (1), and then select "X-over detected height" → "Teaching" from the auto X-over seam setting screen.
   1-2. Set the presser foot onto the X-over seam area and then press the OK key.
   1-3. Press the return key.

   * Numeric value input when teaching recognition cannot be performed correctly because of the type of material

2. Set the X-over seam correction value.
   * Only adjust if the stitch pitch is not suitable at +0.
   2-1. Keep pressing the X-over seam assist mode key (1), and then select "X-over seam sewing PARA" from the auto X-over seam setting screen.
   2-2. Select "Feed amount correction on X-over seam", and then set the correction amount. (* The figure is a percentage, so for example, if you set it to "+1", the sewing pitch will increase by 1% of the main sewing pitch.)
   2-3. Select "Feed amount correction at crossing of X-over seam", and then set the correction amount. (* The figure is a percentage, so for example, if you set it to "+1", the sewing pitch will increase by 1% of the main sewing pitch.)
   2-4. Press the return key.
   2-5. Press the X-over seam assist mode key (1) so that the icon illuminates.

NOTE:

If the sewing pitch is incorrect and does not match the X-over seam detection timing, select "X-over seam sewing PARA" and then change the "X-over seam detecting correction" setting.

Set to positive value → Detection timing is advanced
Set to negative value → Detection timing is retarded

If a loud noise is generated, the presser foot may be bouncing. In such cases, increase the presser foot pressure, or adjust the X-over seam detection sensitivity to a negative value.
8-3. Using the feed dog locus

Select the feed dog locus according to the sewing application. (4 types)

1. Press the special locus key.

<table>

</tbody>
</table>

Responsiveness to heavy-weight materials is improved compared to previous -3 specifications. [-][3 specifications only]

1. Use a genuine Brother rotary hook (SB6568001).
2. Replace gauge parts as necessary.
   - Recommended needle plate (SBS244001)
   - Recommended feed dog (SB5226001)
3. If necessary, replace the presser bar, presser spring, needle bar and main tension spring to those for -5 specifications.
4. Press the special locus key, and then select No. 2.

**NOTE:**

- The sewing speed will be subjected to the following limits (sewing speed/sewing pitch).
  - 4000sti/min / 3.0
  - 3500sti/min / 4.0
  - 2000sti/min / 5.0
8-4. Example of using hand switch settings

Functions can be easily assigned to the hand switches.

1. Press the menu key (1).
2. Press the “Hand switch setting” key (2).
3. Press the “Hand switch A function setting” key or the “Hand switch B function setting” key, and then assign the required function.
4. Press the return key (3) or the home key (4) to return to the home screen.
5. If necessary, press the correction sewing key.

* Refer to “6-10. Hand switches” for other settings.
9. THREAD TENSION

9-1. Adjusting the thread tension

CAUTION

Turn off the power switch before removing or inserting the bobbin case. The machine may operate if the treadle is depressed by mistake, which could result in injury.

Good even stitches

Upper thread tension too weak
Lower thread tension too strong

Increase the upper thread tension.
Decrease the lower thread tension.

Upper thread tension too strong
Lower thread tension too weak

Decrease the upper thread tension.
Increase the lower thread tension.

<Lower thread tension>
Adjust by turning the adjustment screw (1) until the bobbin case drops gently by its own weight while the thread end coming out of the bobbin case is held.

<Upper thread tension>
After the lower thread tension has been adjusted, adjust the upper thread tension so that a good, even stitch is obtained.
1. Lower the presser foot.
2. Adjust by turning the tension nut (2).
9-2. Adjusting the presser foot pressure

Good even stitches

- Upper thread

Skipped stitches occur

Uneven stitch length

Stitches are puckered

The presser foot pressure should be as weak as possible, but strong enough so that the material does not slip.

1. Loosen the adjusting nut (1).
2. Turn the presser adjusting screw (2) to adjust the presser foot pressure.
3. Tighten the adjusting nut (1).

9-3. Adjusting the trailing length after thread trimming

- At the time of thread trimming, the thread tension is loosened and tension is applied by the pretension (1) only.
- The standard upper thread trailing length is 25 to 30 mm.
- If the tension of the pretension (1) is increased, the lengths of the threads trailing from the needle tips will be reduced; if the tension is reduced, the lengths will be increased.

Adjust by turning the pretension (1).
9-4. Adjusting the thread take-up amount (3 specifications)

CAUTION

Turn off the power switch before carrying out these operations. The machine may operate if the treadle is depressed by mistake, which could result in injury.

NOTE: Do not use this function with models that are not 3 specifications.

When sewing heavy materials, the thread tension can be adjusted more easily if the thread take-up amount is set to a larger amount.

1. Remove the face plate.
2. Use a hexagonal wrench to loosen the set screws (1) and (2) by approximately two turns.
3. Adjust the thread take-up amount.

**<To increase the thread take-up amount>**

Turn the thread take-up support shaft (3) clockwise so that the groove (4) is facing straight upward.

**<To return the thread take-up amount to the standard setting>**

Turn the thread take-up support shaft (3) counterclockwise so that the groove (4) is facing straight downward.

4. With the thread take-up support shaft (3) pushed in as far as it will go, first tighten the set screw (1) until it touches the screw stop on the thread take-up support shaft (3).
5. After this, tighten the set screw (2).
6. Install the face plate.
10. CLEANING

10-1. Daily cleaning procedures

The following cleaning operations should be carried out each day in order to maintain the performance of this machine and to ensure a long service life. Furthermore, if the sewing machine has not been used for a long period of time, carry out the following cleaning procedures before using it again.

1. Cleaning
   1. Raise the presser foot.
   2. Remove the two screws (1), and then remove the needle plate (2).
   3. Use a soft wire brush to clean any dust from the feed dog (3).
   4. Install the needle plate (2) with the two screws (1).
   5. Tilt back the machine head.
   6. Remove the bobbin case (4).
   7. Wipe off any dust from the rotary hook (5) with a soft cloth, and check that there is no damage to the rotary hook (5).
   8. Remove the bobbin from the bobbin case (4) and clean the bobbin case (4) with a cloth.
   9. Insert the bobbin into the bobbin case (4), and then place the bobbin case (4) back into the machine.
2. **Lubrication**

**Oil tank oil quantity**
Check the oil gauge window (1), and add more oil if the oil gauge (2) is below the lower reference line. (Refer to "3-3. Lubrication").

3. **Checking**

1. Replace the needle if it is bent or if the tip is broken.
2. Check that the upper threads have been threaded correctly. (Refer to "4-5. Threading the upper thread").
3. Carry out a test sewing.
11. ADJUSTING THE ROTARY HOOK LUBRICATION AMOUNT

CAUTION

Be careful not to touch your fingers or the lubrication amount check sheet against moving parts such as the rotary hook or the feed mechanism when checking the amount of oil supplied to the rotary hook. If care is not taken, injury may result.

Use the following procedure to check the amount of oil being supplied to the rotary hook when replacing the rotary hook or when changing the sewing speed.

<Checking the lubrication amount>
1. Remove the thread from all points from the thread take-up lever to the needle.
2. Use the lifting lever to lift the presser foot.
3. Run the machine at the normal sewing speed for approximately 10 minutes without sewing any material (following the same start/stop pattern as when actually sewing).
4. Place the lubrication amount check sheet (1) to the left of the rotary hook (2) and hold it there. Then run the sewing machine at the normal sewing speed for 10 seconds. (Any type of paper can be used as the lubrication amount check sheet (1).)
5. Check the amount of oil which has spattered onto the sheet.

If adjustment is necessary, carry out the following operations in "Adjusting the lubrication amount".

NOTE:
If the lubrication amount does not match the correct amount shown in the illustration at left (if the amount of spattered oil is too much or none at all), turn the adjusting screw (3) clockwise to fully tighten it, turn it back counterclockwise by 3 1/2 turns, and then carry out the following adjustment.

<Adjusting the lubrication amount>
1. Tilt back the machine head.
2. Turn the adjusting screw (3) to adjust the lubrication amount.
   • If the rotary hook adjusting screw (3) is turned clockwise, the lubrication amount becomes greater.
   • If the rotary hook adjusting screw (3) is turned counterclockwise, the lubrication amount becomes smaller.
3. Check the lubrication amount again according to the procedure given in "Checking the lubrication amount" above.
   * Turn the rotary hook adjusting screw (3) and check the lubrication amount repeatedly until the lubrication amount is correct.
4. Check the lubrication amount again after the sewing machine has been used for approximately two hours.
12. STANDARD ADJUSTMENTS

**CAUTION**

- Maintenance and inspection of the sewing machine should only be carried out by a qualified technician.
- Ask your Brother dealer or a qualified electrician to carry out any maintenance and inspection of the electrical system.
- If any safety devices have been removed, be absolutely sure to re-install them to their original positions and check that they operate correctly before using the machine.
- Secure the table so that it will not move when tilting back the machine head. If the table moves, it may crush your feet or cause other injuries.

Use both hands to hold the machine head when tilting it back or returning it to its original position. If only one hand is used, the weight of the machine head may cause your hand to slip, and your hand may get caught.

- Turn off the power switch and disconnect the power cord plug at the following times. The machine may operate if the treadle is depressed by mistake, which could result in injury.
  - When carrying out inspection, adjustment and maintenance
  - When replacing consumable parts such as the rotary hook and knives

If the power switch needs to be left on when carrying out some adjustment, make sure that you switch the sewing machine to maintenance mode. Pay careful attention to safety.

12-1. Thread tension spring

**Thread tension spring position**

The standard position of the thread take-up spring (1) is 6 to 7 mm (for -3 specifications) or 4 to 5 mm (for -5 specifications) above the surface of the arm thread guide (3) when the presser foot (2) is lowered.

1. Lower the presser foot (2).
2. Loosen the set screw (4).
3. Turn the thread tension bracket (5) to adjust the spring position.
4. Securely tighten the set screw (4).

* If the lifting lever or other method has been used to raise the presser foot when adjusting the thread take-up spring, the movement amount of the thread take-up spring will be limited by the thread take-up spring stopper.
**<Thread take-up spring tension>**

The standard tension of the thread take-up spring (1) varies in accordance with the machine specifications as shown in the table.

<table>
<thead>
<tr>
<th>Specifications</th>
<th>Tension Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>3</td>
<td>0.25 - 0.35N</td>
</tr>
<tr>
<td>5</td>
<td>0.30 - 0.5N</td>
</tr>
</tbody>
</table>

1. Press the upper thread slightly above the thread tension bracket (5) with a finger to stop the thread spooling out.
2. Pull the upper thread downward so that the thread take-up spring (1) is extended to the same height as the base of the arm thread guide (3), and then measure the tension of the thread take-up spring (1).
3. Insert the tip of a screwdriver into the groove in the thread tension stud (6) and turn it to adjust the tension of the thread tension spring (1).

**NOTE:** If using a tension gauge (7) (part code: 183922-101) to measure the tension, take the upper thread reading from the scale [at the red line side].

* Do not adjust the tension of the thread take-up spring if the presser foot has been raised by the lifting lever, or if the thread trimmer solenoid is ON.

---

**12-2. Arm thread guide R**

The standard position of arm thread guide R (1) is the position where the screw (2) is in the center of the adjustable range for arm thread guide R (1).

* To adjust the position, loosen the screw (2) and then move arm thread guide R (1).
  * When sewing heavy-weight material, move arm thread guide R (1) to the left. (The thread take-up amount will become greater.)
  * When sewing light-weight material, move arm thread guide R (1) to the right. (The thread take-up amount will become less.)
12. STANDARD ADJUSTMENTS

12-3. Presser foot height

The standard height of the presser foot (1) is 6 mm when the presser foot (1) is raised by means of the lifting lever (2).
1. Loosen the nut (3), and then turn the adjustment screw (4) so that there is no pressure applied to the presser foot.
2. Raise the presser foot (1) by using the lifting lever (2).
3. Remove the rubber cap (5) from the face plate.
4. Loosen the bolt (6) and then move the presser bar (7) up or down until the presser foot (1) is at the standard height of 6 mm.
5. Tighten the bolt (6).
6. Install the rubber cap (5).
7. Adjust the presser foot pressure using the presser adjusting screw (4), and then tighten the nut (3).

12-4. X-over seam sensor correction

Be sure to carry out this procedure when replacing the presser foot.

1. Turn on the power.
2. Press the menu key (1).
3. Select the "X-over seam sensor correction" key (2).
4. Turn the machine pulley to set the upper shaft position to between 110 and 290 degrees.
5. Lower the presser foot.
6. Press the OK key (3).
12-5. Adjusting the feed dog height

1. Turn on the power.
2. Start backtack sewing, best PFM mode, slow start, special locus and X-over seam assist will turn off.
3. Set the feed pitch to 3 mm (for -[3] specifications) or to 5 mm (for -[5] specifications). (Refer to "5-4-3. Main sewing settings ".)
4. Press the menu key (1).
5. Check the clearance A when the feed dog (2) is at the furthest forward position.
   - [3] specifications: 0.5 mm
   - [5] specifications: 3 mm

* The standard height of the feed dog (2) when it is raised as far as possible above the surface of the needle plate is 0.8 mm (for -[3] specifications) or 1.2 mm (for -[5] specifications).

6. Turn the machine pulley to move the feed dog (2) to its highest position above the needle plate.
7. Tilt back the machine head.
8. Loosen the set screw (3).
9. Turn the feed lifting rock bracket stud (4) within a range of 90° from the reference line (5) to adjust the vertical height of the feed bar (6). (Fig. A)
10. Tighten the set screw (3).

* If you are worried about the angle of the feed dog (2), turn the shaft (7) while carrying out the above adjustment. (Fig. B) (Refer to "12-6. Adjusting the feed dog angle" on the nextpage for details of this operation.)
12-6. Adjusting the feed dog angle

1. Turn on the power.
2. Start backtack sewing, best PFM mode, slow start, special locus and X-over seam assist will turn off.
3. Set the feed pitch to 3 mm (for -3 specifications) or to 5 mm (for -5 specifications). (Refer to “5-4-3. Main sewing settings “.)
4. Press the menu key (1).

* The standard angle for the feed dog (2) when it is lowered until its top is flush with the top of the needle plate is for the O mark (or the V groove) in the feed bar shaft (3) to be aligned with the feed rocker bracket arm (4) and for the feed dog (2) and to be parallel to the needle plate.

5. Turn the machine pulley to move the feed dog (2) to its highest position above the needle plate.
6. Tilt back the machine head.
7. Loosen the set screw (5).
8. Turn the feed base shaft (3) in the direction of the arrow within a range of 90º with respect to the standard position. (Figure <C>)
   - In order to prevent puckering, lower the front of the feed dog (2).
   - In order to prevent the material from slipping, raise the front of the feed dog (2).
9. Securely tighten the set screw (5).
10. Press the home key (6).

* If you would like to tilt the feed dog (2) further, turn the feed lifting rock bracket stud (7) while carrying out the above adjustment. (Figure <D>)
   (Refer to “12-5. Adjusting the feed dog height” on the previous page for details of this operation.)
* The height of the feed dog (2) will change after the angle has been adjusted, so it will be necessary to re-adjust the height of the feed dog (2).
12-7. Adjusting the needle bar height

Reference line (a) on the needle bar (1) should be aligned with the lower edge of the needle bar bush (2) as shown in the illustration when the needle bar (1) is at its lowest position.

1. Turn the machine pulley to set the needle bar (1) to its lowest position.
2. Remove the rubber cap (3) from the face plate.
3. Loosen the screw (4) and move the thread wiper (1) up or down to adjust its position.
4. Securely tighten the screw (4).
5. Install the rubber cap (3).

DB x 1  DA x 1
DP x 5
12-8. Adjusting the needle and feed mechanism timing

1. Turn on the power.
2. Start backtack sewing, best PFM mode, slow start, special locus and X-over seam assist will turn off.
3. Set the feed pitch to 3 mm (for -[ ]3 specifications) or to 4 mm (for -[ ]5 specifications). (Refer to “5-4-3. Main sewing settings ”.)
4. Press the menu key (1).
   * The standard position for the point of the needle is as described below when the feed dog (2) is lowered from its highest position until it is aligned with the top of the needle plate (3).

   ![Diagram](<-[]3>)

   This is the position where the top of the feed dog (2) and the top of the needle plate (3) are aligned, and the point of the needle is aligned with the bottom edge of the needle plate (3).

   ![Diagram](<-[]5>)

   The top of the feed dog (2) and the top of the needle plate (3) are aligned, and there is a clearance of 1 to 4 mm between the point of the needle and the top of the needle plate (3).

5. Tilt back the machine head.
6. Loosen the two set screws (5) of the feed lifting eccentric cam (4), and then turn the feed lifting eccentric cam (4) slightly to adjust the timing.
   - To advance the needle timing, turn in the direction of <A>, and to retard the needle timing, turn in the direction of <B>.
   - To prevent material slippage from occurring, retard the needle timing. (Fig. (B))
   - To improve thread tightening, advance the needle timing. (Fig. (A))

**NOTE:** If the feed lifting eccentric cam (4) is turned too far in the direction of <A>, it may cause the needle to break.

7. After adjusting, securely tighten the set screw (5).
8. Press the home key (6).
12-9. Needle and rotary hook timing

The rotary hook tip (3) should be aligned with the center of the needle (4) when the needle bar (1) moves up 1.8 mm (for -3 specifications) or 2.2 mm (for -5 specifications) from its lowest position to the position where reference line (b) is aligned with the needle bar bush (2) as shown in the illustration. (The distance from the upper edge of the needle hole to the rotary hook tip will be 0.5 to 0.7 mm at this time.)

1. Turn the machine pulley to raise the needle bar (1) from its lowest position until reference line (b) is aligned with the lower edge of the needle bar bush (2) as shown in the illustration.

2. Loosen the three set screws (5), and then align the rotary hook tip (3) with the center of the needle (4). There should be a gap of 0 to 0.1 mm (for -3 specifications) or 0 to 0.15 mm (5 specifications) between the rotary hook tip (3) and the needle (4) at this time.

3. Securely tighten the three set screws (5).

<Checking the clearance between the rotary hook and bobbin case holder position bracket>

Check that the clearance between the rotary hook (6) and the bobbin case holder position bracket (7) is enough to allow the thread being used to pass through smoothly. The clearance should be 0.4 to 0.7 mm (for -3 specifications) and 0.6 to 1.1 mm (for -5 specifications).
12-10. Adjusting the presser foot floating amount (minute lifting amount) (option)

When sewing stretch materials and materials with long pile, you can make minute adjustments to the floating amount for the presser foot (1) in accordance with the material.

1. Turn the sewing machine pulley by hand to move the feed dog (2) below the needle plate (3).
2. Use the lifting lever to lower the presser foot (1).
3. Remove the screw (4), and then replace the adjustment screw set (5) (option SB6564).
4. Turn the adjusting screw (6) to adjust the floating amount.
   - To raise the presser foot (1) ... Turn the adjusting screw (6) clockwise.
   - To lower the presser foot (1) ... Turn the adjusting screw (6) counterclockwise.
5. Tighten the nut (7).

* After making the adjustment, sew a piece of material to check the floating amount.
12-11. Thread trimming

1. Turn off the power switch.
2. Remove the presser foot, needle plate and feed dog.
3. Tilt back the machine head.
4. Loosen the screw (2) of the thread trimmer lever (1) and the screw (4) of the upper knife lever (3). (This will allow the upper and lower knife holders and the needle bar mechanism to operate independently.)

5. Install the lower knife (6) to the lower knife holder (7) with the two screws (5).

6. Install the upper knife (10) with the two screws (8) and (9).
   * Install the upper knife (10) so that it is almost parallel to the ridge line on the mounting surface of the upper knife holder (11).
   * If the upper knife (10) is tilted forward, the knife pressure will increase, and if it is tilted backward, the knife pressure will decrease.
   * After adjusting, operate the upper and lower knife holders by hand and check that the thread can be trimmed.

   * If using thick thread, or if the thread is not being trimmed, adjust the tilt of the upper knife (10) forward.
   * Tilt the upper knife (10) forward slightly (about 0.3 mm) so that the ridge line on the mounting surface of the upper knife holder (11) is slightly visible. (The head of the screw (9) is pan-shaped, and so the upper knife (10) can pivot on this screw when it is tilted.)
7. Adjust the positions of the upper and lower knife holders so that the upper knife (10) and the lower knife (6) mesh and the tips of both knives are aligned at the center of the needle.

8. Tighten the screw (4) of the upper knife lever (3) to secure the upper knife (10) in place.
   * Tighten the screw (4) gently but securely at this time so that the upper knife lever (3) does not shift its position. As a guide, the screw (4) should be positioned in the center of the slot in the upper knife lever (3).

9. Turn the machine pulley while the thread trimmer solenoid is still turned on so that the thread trimmer cam (12) moves the thread trimmer cam roller (13) to its maximum displacement position.
   * Make sure that the thread trimmer solenoid does not turn off and does not return during this step.
10. Set the maximum meshing amount for the upper and lower knives to 2 mm.
   * Turn the thread trimmer lever (1) to align the tip of the upper knife (10) with the center of the index mark (14) on the lower knife (6).
   * Make sure that the tip of the upper knife (10) does not go past the index mark (14).

11. Tighten the screw (2) of the thread trimmer lever (1).
   * Make sure that there is no play in the thrust direction in the forked shaft (15) of the thread trimmer lever (1) (see illustration on page 8).
<Thread trimming cam position adjustment>

1. Turn the machine pulley to raise the needle bar 6 mm from its lowest position (reference line (a) position) so that reference line (b) is aligned with the bottom edge of the needle bar bush.

2. At the above position, push the plunger (1) of the thread trimming solenoid with your finger in the direction of the arrow. Adjust the position of the thread trimmer cam (2) at this time so that the roller shaft (4) of the thread trimming cam lever assembly (3) touches the hollow (c) of the thread trimmer cam (2) and so that the clearance between the edge of the thread trimmer is 0.6 to 0.8 mm. (Fig. A)

3. Check that the clearance between the edge of the thread trimmer cam (2) and the roller shaft (4) is 0.5 mm when the roller shaft (4) returns to the right. (Fig. (B))

* Tighten the two set screws (5) to approximately 4 N.m.
13. LIST OF ERROR CODES

LIST OF ERROR CODES

If an error code appears on the touch panel display

- Items with a "**" in the "Page" column should only be checked by a qualified technician.
- For items with "****" appearing in the "Page" column, ask the place of purchase for advice.

<Connector layout diagram>

If an error code that is not listed above appears or if carrying out the specified remedy does not solve the problem, contact the place of purchase.
14. TROUBLESHOOTING

- Please check the following points before calling for repairs or service.
- Simplified details can be checked on the panel. (Menu → Troubleshooting)
- If the following remedies do not fix the problem, turn off the power switch and consult a qualified technician or the place of purchase.

## DANGER

Wait at least 5 minutes after turning off the power switch and disconnecting the power cord from the wall outlet before opening the control box cover. Touching areas where high voltages are present can result in severe injury.

## CAUTION

Turn off the power switch and disconnect the power cord before carrying out these operations. The machine may operate if the treadle is depressed by mistake, which could result in injury.

Items with a "*" in the "Page" column should only be checked by a qualified technician.

| 7 Uneven seam | • Is the presser foot pressure too weak?  
                Adjust the presser foot pressure.  
• Is the feed dog too low?  
                Adjust the feed dog height.  
• Is the bobbin scratched?  
                If the bobbin is damaged, smooth it with an oiled grindstone or replace it.  
                Alternatively, replace the bobbin. | 68 |
| 8 Large degree of puckering (Thread is too tight) | • Is the upper thread tension too strong?  
               Make the upper thread tension as weak as possible.  
• Is the lower thread tension too strong?  
                Make the lower thread tension as weak as possible.  
• Is the needle tip blunt?  
                Replace the needle if it is blunt.  
• Is the needle too thick?  
                Replace with as thin a needle as possible.  
• Is the thread take-up spring tension too strong?  
                Make the thread take-up spring tension as weak as possible.  
• Is the thread take-up spring operating range too large?  
                Lower the position of the thread take-up spring to as low a position as possible.  
• Is the presser foot pressure too strong?  
                Adjust the presser foot pressure.  
• Is the sewing speed too fast?  
                Gradually reduce the sewing speed.  
• Is the angle of the feed dog correct?  
                Tilt the front of the feed dog down slightly. | 67 |
| 9 Lower thread is tangled at the sewing start. Bobbin is spinning during thread trimming. | • Is the bobbin spinning direction correct when the lower thread is being pulled?  
               Set the bobbin so that it turns in the opposite direction to the rotary hook.  
• Is there too much thread wound onto the bobbin?  
                The bobbin winding amount should not be more than 80 %.  
• Is the anti-spin spring attached?  
                Attach the anti-spin spring.  
• Is the bobbin turning smoothly?  
                If the bobbin is not turning smoothly, replace the bobbin.  
• Is a bobbin other that the light-alloy bobbins specified by Brother being used?  
                Use only bobbins which are specified by Brother. | 17 |

<tr>
<th>Problem</th>
<th>Possible cause</th>
<th>Page</th>
</tr>
</thead>
</table>
| 10 Upper and lower threads are breaking. | 0
| 1. Is the needle tip bent? Is the needle tip blunt?  
  If the needle tip is bent or blunt, replace the needle.  
  2. Is the needle properly installed?  
  If it is incorrect, install the needle correctly.  
  3. Is the machine properly threaded?  
  If it is incorrect, thread the thread correctly.  
  4. Is the rotary hook sufficiently lubricated?  
  If the oil gauge is down to the lower reference line in the oil gauge window, add more oil.  
  5. Is the upper or lower thread tension too weak or too strong?  
  Adjust the upper thread or lower thread tension.  
  6. Is the upper thread may be loose because the thread take-up spring operating range is too small?  
  Adjust the position of the thread take-up spring.  
  7. Is the rotary hook, feed dog or other part damaged?  
  If the thread path is damaged, smooth it with sandpaper or similar. Alternatively, replace the damaged part.  
  8. Is the thread path damaged?  
  If the thread path is damaged, smooth it with sandpaper. Alternatively, replace the damaged part. | 16  
18  
7

73*  
* |
| 11 Thread breaks during backtack sewing. | 2
| 1. Is the backtack sewing speed too fast?  
  Use the panel to reduce the backtack sewing speed. | 28  
30 |
| 12 Backtack sewing pitch varies depending on the sewing direction. Backtack edge is not aligned. | 3
| Adjust using MSW-201. | 51* |
| 13 Thread tightening around X-over seam areas. | 4
| 1. Is the height of the feed dog correct?  
  Increase the feed dog height. | 76* |
| 14 Upper thread is pulling out of the needle after thread trimming. | 5
| 1. Is the upper thread trailing length after thread trimming appropriate?  
  Decrease the tension of the pre-tension.  
  2. Is the thread path not smooth enough?  
  Use a file with a fine grain or sandpaper to polish smooth the thread path.  
  3. Does the thread being used slip easily?  
  Turn the needle bar bush thread guide D sideways to increase the resistance.  
  4. If the upper thread is pulling out of the needle after thread trimming, check using the method given below.  
  1. Check the upper thread trailing length.  
  2. Re-adjust the upper thread trailing length to make it longer.  
  3. Keep pressing the best PFM mode key, and then select “T/T short parameter”.  
  (1) Delete the stitch pitch for the previous stitch.  
  (2) Decrease the sewing speed for the final stitch and the stitch before it. | 68

| 15 Upper thread is raised above the material surface after thread trimming. | • Upper thread protrudes from the material surface after thread trimming.  
  1. Increase the pitch during thread trimming.  
  2. Set the feed direction for sewing end processing to ↑.  
  Stitch pitch and sewing speed for stitch before final stitch. | 35*   |
| 16 When T/T short is on, skipped stitches occur where they should be sewn at the sewing end. | • Use the T/T short parameters to delete the the stitch before the final stitch.  
  • Use the T/T short parameters to reduce the stitch pitch of the final stitch and the one before it.  
  • Use the T/T short parameters to set the feed direction for sewing end processing to ↑.  
  If sewing backtack stitches  
  • Reduce the number of stitches (D) for backtack sewing by 1 stitch. | 35* (94-15) |
| 17 When T/T short is on, condense stitches (the final stitch and the one before it) cannot be sewn neatly before thread trimming. | • Use the T/T short parameters to increase the stitch pitch.  
  • Use the T/T short parameters to reduce the sewing speed. | 35* (94-15) |
| 18 Thread trailing length on underside of material is too long.         | • Turn on the T/T short function.  
  If you would like the trailing length to be even sorter after turning on the T/T short function.  
  • Is the meshing position of the thread trimming knives directly below the needle hole?  
  • Use the T/T short parameters to reduce the stitch pitch of the condense stitches (the final stitch and the one before it) before thread trimming.  
  • Use the T/T short parameters to reduce the pitch during thread trimming. | 35* |
| 19 When T/T short is on, thread trailing length on underside of material is too short. | • Use the T/T short parameters to increase the pitch during thread trimming. | 35* (94-15) |
| 20 To prevent fraying at the sewing end                                 | • Turn on the T/T short function, and then use the T/T short parameters to set the feed direction for sewing end processing to ↑. | 35* (94-15) |
| 21 Incorrect thread trimming (Upper and lower threads are both not being trimmed) | • Is the fixed knife or movable knife damaged or worn?  
  Replace the fixed knife or the movable knife.  
  • Is there not enough of a meshing amount between the upper knife and the lower knife?  
  Adjust the tip of the upper knife to the lower knife index position so that the knives mesh. | 82*   |
<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible cause</th>
<th>Page</th>
</tr>
</thead>
</table>
| Incorrect thread trimming (Upper thread is not being trimmed.) (Lower thread is not being trimmed.) | - Is the needle properly installed? If it is incorrect, install the needle correctly.  
- Is the fixed knife or movable knife blunt? Replace the fixed knife or the movable knife.  
- Tilt the upper knife forward slightly. (About 0.1 to 0.3 mm)  
- Is there not enough of a meshing amount between the upper knife and the lower knife? Check that the tip of the upper knife comes to the lower knife index position so that the knives mesh. | 16    |
| Broken needle                                                          | - Is the material being pushed or pulled with excessive force during sewing?  
- Is the needle properly installed? If it is incorrect, install the needle correctly.  
- Is the needle tip bent? Is the needle tip broken, or is the needle hole blocked? Replace the needle.  
- Is the needle and rotary hook timing correct? Adjust the height of the needle bar. Adjust the clearance between the needle and the tip of the rotary hook.  
- Is the needle and feed mechanism timing correct? Adjust to the standard timing.  
- Try pressing the special locus key and selecting No. 2 or No. 3. | 16    |
| Oil gauge (1) is not visible in oil gauge window.                      | - Is the oil tank empty? Fill the oil tank with oil.                                                                                                                                                             | 7     |
| The presser foot does not lift using the knee lifter.                 | - Is the knee lifter being used at the needle up position while thread trimming is disabled? Enable thread trimming.  
- Is the knee lifter being used before the sewing machine has stopped? Adjust the tension release switching plate upward to retard the tension release timing. |       |
| Thread take-up spring stopper and thread take-up spring are twisted together. | - Adjust the tension release switching plate upward to retard the tension release timing.                                                                                                                     |       |

**NOTE:**  
- It is extremely dangerous to leave any pieces of broken needle sticking in the material. If the needle breaks, search for all pieces until the whole of the needle is found again.  
- Furthermore, we recommend that thorough steps be taken to account for such needles to comply with product liability regulations.

Switch the operation panel to a screen where sewing is possible, such as the home screen. | 12 · 13 |
| 28 Machine does not operate at high speed. | • Is the sewing speed setting or backtack stitch speed setting too slow?  
Set a higher sewing speed. | 28 - 30 |
| 29 Machine stops during sewing. | • Has the sewing pattern been set to a fixed stitch pattern?  
In main sewing mode, set the sewing pattern to something other than a fixed stitch pattern.  
• Is the power supply voltage too low?  
Check the power supply voltage.  
(If the power cord is too long or too many appliances are being run from a single outlet, this may cause voltage drops which will in turn cause the reset function to activate and stop the machine, even if the power supply itself is normal.) | 25 · 29 |
| 30 Nothing appears on the operation panel display. | • Is the power supply connector disconnected from the control box?  
Insert the connectors securely.  
• Is the operation panel connector inside the control box disconnected?  
Insert the connectors securely. | 12 · 13 |
| 31 “Grease up” flashes in the panel display when the power switch is turned on. | • This display is to notify you that it is time to apply grease.  
Apply grease. | 8 |
