# Brother's History

# The Brother Group Has Followed a Trajectory of Business Transformation and Growth while Responding to Customer and Social Needs

In 1908, the Yasui brothers, the founders of Brother who started in sewing machine repairs, decided to use the product knowledge they gained through repairs and began to develop domestically-produced machines that wouldn't break easily. As they had no capital for production equipment, they used their originality and ingenuity to improve their own factory, and in 1928, they finally completed a chain-stitch sewing machine for the production straw hats. The sewing machine that they sold gained a reputation for being more durable than foreign-made sewing machines, was popular with customers and even contributed to the revitalization of the domestic industry. The predecessor of Brother Industries, NIPPON SEWING MACHINE MANUFACTURING CO. was established in 1934. The Prospectus of Establishment demonstrates the brothers hope to produce sewing machines domestically, and contains their passionate feelings towards solving issues in society through enterprise. Passing on the spirit of foundation that seeks to contribute to society through business, today, it has reached and impacted all employees around the world as the spirit of "At your side."

#### From foundation

## Diversifying Through Domestic Production of Sewing Machines and Applying Core Technologies

Kanekichi Yasui, the father of the founding brothers, established a sewing machine repair business in 1908. At the time, Japan relied on imports for sewing machines, which were precision industrial products. With no work due to the recession, the eldest son Masayoshi, who was helping in the family business, made the decision to create work for people wishing to work, begin domestic production of sewing machines. and develop the import-based industry into an export-based industry. Joining forces, the brothers developed a chain-stitch sewing machine for the production of straw hats in 1928. In 1932, they completed development of the long-awaited domestic home sewing machine. Then, in 1947, the first sewing machine exports began. In 1954, they expanded overseas with the establishment of a facility in the United States. Utilizing technologies cultivated through sewing machines, they started diversifying and developed consumer electronics such as knitting machines, washing machines and vacuum cleaners.

## Entering the Office Machine Field and Developing Machine Tools Refined Through a Philosophy of Independence

In response to growing needs in the U.S. market, Brother began manufacturing portable typewriters in 1961. Receiving good reviews for price affordability and performance that was comparable to its competitors, they laid the foundations for Brother to become an office machine manufacturer. With the idea of making its own product-manufacturing machines, the company launched an external sales business for the machine tools it had been developing itself since its foundation. With outstanding machining performance, its tapping machines became a long-selling product. In 1966, it developed a calculator as its first product utilizing electronics technologies, which strengthened its position in the office machine field. While developing its own facilities in Europe, it expanded its overseas business through such moves as the acquisition of a major British sewing machine manufacturer in 1968.

> Product development incorporating the needs of overseas customers Development capabilities and mass production systems for the office machine field Precision processing technologies for the machine tool field

Expansion of overseas facilities and market development capabilities

#### From 1970

## Entering the Information Equipment Field and Promoting Mechatronics

With the spread of compact computers (minicomputers). Brother noticed the limited choices available for printers that support those minicomputers, so it collaborated with venture company Centronics Data Computer Corp. in the United States to co-develop a high-speed dotmatrix printer in 1971. Developing this new market triggered a subsequent expansion of the information equipment business. Electronizing products one after the other, it launched the industry's first computerized home sewing machine in 1979 and an electronic office typewriter in 1980. Furthermore, it launched a numerical control machine tool into the machine tool field and pivoted to the mechatronics field, which combines mechanical and electronic technologies.

- New business development capabilities through joint development
- Dot impact printing technologies
- Mechatronics technologies through electronization

# Transforming Business

In 1981, Brother rolled out a global brand strategy as an official supplier of the Los Angeles Olympics. Its unique products began to attract a lot of attention, including launch of the world's smallest personal printer utilizing thermal printing technologies in 1982, and the industry's first popular Japanese word processor in 1984. It was then able to apply the thermal printing technologies and kana-kanji conversion technologies cultivated through this development process to launch labeling systems in 1988. It was able to develop a new market under the P-touch brand. In response to trade friction and an appreciating yen, it expanded its production overseas. Starting to focus on business concentration and selection. Brother withdrew from the consumer electronics and musical instruments businesses and strengthened its investment in the information and communications equipment field instead.

## Global branding

- Thermal printing technologies
- Responsiveness to exchange rate fluctuations
- and local production capabilities
- Information and communications technologies
- through development of vending machines for computer software, Brother launched the industry's first online karaoke system in 1992. In the same year, it developed fax machines for the SOHO market that became a great hit for low prices and differentiated functions. In 1995, it launched a small All-in-One with fax machine, printer, copier and other functions condensed into one machine. Adding laser and inkiet technologies to its product lineup. Brother's business expanded rapidly as mass retail stores selling products to emerging business offices grew. Aiming to achieve optimal procurement and production globally, it began producing

## Developing Online Karaoke Systems and Expanding Information and Communications Equipment

Utilizing the content delivery technologies it cultivated information and communications equipment in Asia as it went through a capital restructuring of its sales companies From 2000

## Expanding Information and Communications

Equipment and Strengthening the Business Portfolio In addition to China Brother started producing in Vietnam and the Philippines and established a consumables recycling facility in Europe as part of efforts to strengthen its global production base. It also expanded its sales facilities and developed its business foundation globally. It dramatically expanded its business scale as well with a focus on information and communications equipment. In 2002, the company established its Medium-to Long-Term Corporate Vision. Then in 2008, it revised the Brother Group Global Charter, a foundation for all its activities, and embodied Brother's motto, "At your side." throughout its corporate culture. Through mergers and acquisitions. Brother added mobile printers, reducers, and other technologies to its business portfolio. Then in 2015, it acquired all shares in British company Domino Printing Sciences PLC and made its entry into the industrial printing business. It is now driving business expansion in the industrial field.

- Global business foundation
- Established corporate culture of "At your side."
- Strengthened business portfolio through M&A
- Development and selling capabilities in the
- industrial printing field

# We Use the Competitive Advantage We Have Cultivated and Contribute to Improving Our Customers' Productivity and Unlocking Their Creativity through Our Businesses

In order to meet the needs of customers, the Brother Group uses the competitive advantage it has cultivated throughout its history of innovation to grow its businesses through manufacturing. Today, through its six businesses-Printing and Solutions (P&S), Machinery, Domino, Nissei, Personal and Home (P&H), and Network and Contents (N&C)-it aims to expand customer value by contributing to improving their productivity and unlocking their creativity.

	Business Segments	Sales Revenue Breakdown Trend of Revenue & Business Segment Profi	s Main Products
Printing and Solutions Business P&S See pages 26-27.	We provide a variety of solutions that meet the printing needs of customers. We support the continuously changing business situations of our customers through our compact printers and All-in-Ones, as well as a diverse lineup of label printers for both home and business use.	Sales Revenue Breakdown Gales Revenue (1)	
Machinery Business Machinery	We contribute to improving the productivity of and creating new value for our customers through machine tools that are ideal for parts processing such as automobile and general machinery; industrial sewing machines that are easy to use, provide high-quality sewing and conserve energy; and garment printers that meet garment digital printing needs.	Sales Revenue Breakdown 9.4% (Fiscal year) 2022 2023	
Domino Business Domino	We provide coding & marking equipment that prints information such as best-before dates and lot numbers on plastic bottles, cans and food packaging as well as digital printing equipment that responds to the need for a wide variety of product packaging in smaller quantities and shorter delivery times, contributing to ensuring consumer protection, traceability and improving productivity at factories.
