IMPORTANT NOTE

- Most of the illustrations in this User's Guide show the MFC-8910DW.

Memory storage

Your menu settings are stored permanently, and in the event of a power failure will *not* be lost. Temporary settings (for example, Contrast, Overseas Mode) *will* be lost. Also, during a power failure the machine will retain the date and time and programmed fax timer jobs (for example, Delayed Fax) for approximately 60 hours. Other fax jobs in the machine's memory will not be lost.

You can broadcast up to 366 different numbers. This will depend on how many Groups, access codes or credit card numbers you have saved, and on how many delayed or stored faxes are in the memory.

Before you begin the broadcast

One Touch and Speed Dial numbers must be stored in the machine's memory before they can be used in a broadcast. (See Basic User's Guide: *Storing One Touch Dial numbers* and *Storing Speed Dial numbers*.)

Group numbers must also be stored in the machine's memory before they can be used in a broadcast. Group numbers include many previously stored One Touch Dial and Speed Dial numbers for easier dialing. (See *Setting up Groups for Broadcasting* >> page 38.)

Telephone line services

For Fax/Tel mode only

When the machine is in Fax/Tel mode, it will use the F/T Ring Time (pseudo/double-ringing) to alert you to pick up a voice call.

If you are at the machine, lift the external telephone's handset, and then press **Hook** to answer.

If you are at an extension telephone, lift the handset during the F/T Ring Time and then press **#51** between the pseudo/double rings. If no one is on the line, or if someone wants to send you a fax, send the call back to the machine by pressing ***51**.

Special line considerations

Roll over telephone lines

A roll over telephone system is a group of two or more separate telephone lines that pass incoming calls to each other if they are busy. The calls are usually passed down or "rolled over" to the next available telephone line in a preset order.

Your machine can work in a roll over system as long as it is the last number in the sequence, so the call cannot roll away. Do not put the machine on any of the other numbers; when the other lines are busy and a second fax call is received, the fax call would be transferred to a line that does not have a fax machine. **Your machine will work best on a dedicated line.**

Two-line telephone system

A two-line telephone system is nothing more than two separate telephone numbers on the same wall outlet. The two telephone numbers can be on separate jacks (RJ11) or combined into one jack (RJ14). Your machine must be plugged into an RJ11 jack. RJ11 and RJ14 jacks may be equal in size and appearance and both may contain four wires (black, red, green, yellow). To test the type of jack, plug in a two-line telephone and see if it can access both lines. If it can, you must separate the line for your machine.

Converting telephone wall outlets

There are three ways to convert to an RJ11 jack. The first two ways may require assistance from the telephone company. You can change the wall outlets from one RJ14 jack to two RJ11 jacks. Or, you can have an RJ11 wall outlet installed and slave or jump one of the telephone numbers to it.

The third way is the easiest: Buy a triplex adapter. You can plug a triplex adapter into an RJ14 outlet. It separates the wires into two separate RJ11 jacks (Line 1, Line 2) and a third RJ14 jack (Lines 1 and 2). If your machine is on Line 1, plug the machine into L1 of the triplex adapter. If your machine is on Line 2, plug it into L2 of the triplex adapter.

Installing machine, external two-line TAD and two-line telephone

When you are installing an external two-line telephone answering device (TAD) and a two-line telephone, your machine must be isolated on one line at both the wall jack and at the TAD. The most common connection is to put the machine on Line 2, which is explained in the following steps. The back of the two-line TAD must have two telephone jacks: one labeled L1 or L1/L2, and the other labeled L2. You will need at least three telephone line cords, the one that came with your machine and two for your external two-line TAD. You will need a fourth line cord if you add a two-line telephone.

- 1 Place the two-line TAD and the two-line telephone next to your machine.

- 2 Plug one end of the telephone line cord for your machine into the L2 jack of the triplex adapter. Plug the other end into the LINE jack on the back of the machine.
- 3 Plug one end of the first telephone line cord for your TAD into the L1 jack of the triplex adapter. Plug the other end into the L1 or L1/L2 jack of the two-line TAD.
- 4 Plug one end of the second telephone line cord for your TAD into the L2 jack of the two-line TAD. Plug the other end into the EXT. jack on the back side of the machine.

- 1 Triplex Adapter
- 2 Two Line Telephone
- 3 External Two Line TAD
- 4 Machine

You can keep two-line telephones on other wall outlets as always. There are two ways to add a two-line telephone to the machine's wall outlet. You can plug the telephone line cord from the two-line telephone into the L1+L2 jack of the triplex adapter. Or, you can plug the two-line telephone into the TEL jack of the two-line TAD.

Additional dialing operations

Dialing access codes and credit card numbers

You can combine more than one Quick Dial number when you dial. This feature may be useful if you need to dial an access code for a cheaper rate from another long distance carrier.

For example, you might have stored '555' on Speed Dial #003 and '7000' on Speed Dial #002. You can use them both to dial '555-7000' if you press the following keys:

Press  (**Address Book**) twice, **003**.

Press  (**Address Book**) twice, **002** and **Start**.

Numbers can be added manually by entering them on the dial pad:

Press  (**Address Book**) twice, **003**, **7001** (on the dial pad), and **Start**.

This would dial '555-7001'. You can also add a pause by pressing the **Redial/Pause** key.

Additional ways to store numbers

Setting up Groups for Broadcasting

If you often want to send the same fax message to many fax numbers you can set up a Group.

Groups are stored on a One Touch key or a Speed Dial number. Each Group uses up a One Touch key or a Speed Dial location. You can then send the fax message to all the numbers stored in a Group just by pressing a One Touch key or entering a Speed Dial number, and then pressing **Start**.

Before you can add numbers to a Group, you need to store them as One Touch or Speed Dial numbers. You can set up to 20 small Groups, or you can assign up to 315 numbers to one large Group.

For MFC-8510DN:

You can add the IFAX and E-mail options by downloading them from the Brother Solutions Center at: <http://solutions.brother.com/>.

Then you can store IFAX and E-mail options on your machine by following the steps for MFC-8910DW. See *For MFC-8910DW (or if you downloaded IFAX and E-mail options)*: ►► page 41.

Cleaning and checking the machine

Clean the outside and inside of the machine regularly with a dry, lint-free cloth. When you replace the toner cartridge or the drum unit, make sure that you clean the inside of the machine. If printed pages are stained with toner, clean the inside of the machine with a dry, lint-free cloth.

WARNING

- DO NOT put a toner cartridge or a toner cartridge and drum unit assembly into a fire. It could explode, resulting in injuries.
- DO NOT use flammable substances, any type of spray, or an organic solvent/liquid containing alcohol or ammonia to clean the inside or outside of the machine. Doing so could cause a fire or electrical shock. Instead, use only a dry, lint-free cloth.

(See Product Safety Guide: *To use the product safely.*)

Important

Use neutral detergents. Cleaning with volatile liquids such as thinner or benzene will damage the surface of the machine.

Cleaning the outside of the machine

- 1 Turn off the machine's power switch.
- 2 Unplug the telephone line cord first, disconnect all cables, and then unplug the power cord from the AC power outlet.
- 3 Wipe the outside of the machine with a dry, lint-free cloth to remove dust.

- 4 Pull the paper tray completely out of the machine.

- 5 Remove anything that is stuck inside the paper tray.

- 6 If paper is loaded in the paper tray, remove it.
- 7 Wipe the inside and the outside of the paper tray with a dry, lint-free cloth to remove dust.

- 8 Re-load the paper and put the paper tray firmly back in the machine.
- 9 Plug the machine's power cord back into the AC power outlet first, connect all cables, and then plug in the telephone line cord.
- 10 Turn on the machine's power switch.

Cleaning the scanner

- 1 Turn off the machine's power switch.
- 2 Unplug the telephone line cord first, disconnect all cables, and then unplug the power cord from the AC power outlet.
- 3 (MFC-8910DW) Unfold the ADF document support (1) and then open the ADF cover (2).
Clean the white bar (3) and the scanner glass strip (4) underneath it with a soft lint-free cloth moistened with water.
Close the ADF cover (2) and fold the ADF document support (1).

- 4 Lift the document cover (1).
Clean the white plastic surface (2) and scanner glass (3) underneath it with a soft lint-free cloth moistened with water.

- 5 In the ADF unit, clean the white bar (1) and the glass strip (2) underneath it with a soft lint-free cloth moistened with water.

Note

In addition to cleaning the scanner glass and glass strip with a soft lint-free cloth moistened with water, run your finger tip over the glass to see if you can feel anything on it. If you feel dirt or debris, clean the glass again concentrating on that area. You may need to repeat the cleaning process three or four times. To test, make a copy after each cleaning.

- 6 Close the document cover.
- 7 Plug the machine's power cord back into the AC power outlet first, connect all cables, and then plug in the telephone line cord.
- 8 Turn on the machine's power switch.

Cleaning the corona wire

If you have print quality problems or the LCD shows **Drum Error**, clean the corona wire as follows:

- 1 Leave the machine turned on for 10 minutes for the internal fan to cool the extremely hot parts inside the machine.
- 2 Press the front cover release button and then open the front cover.

- 3 Take out the drum unit and toner cartridge assembly.

! WARNING

! HOT SURFACE

After you have just used the machine, some internal parts of the machine will be extremely hot. Wait for the machine to cool down before you touch the internal parts of the machine.

! Important

- We recommend that you put the drum unit and toner cartridge assembly on a piece of disposable paper or cloth in case you accidentally spill or scatter toner.
- Handle the drum unit and toner cartridge assembly carefully. If toner scatters on your hands or clothes, immediately wipe or wash it off with cold water.
- To prevent damage to the machine from static electricity, DO NOT touch the electrodes shown in the illustration.

- 4 Clean the corona wire inside the drum unit by gently sliding the green tab from left to right and right to left several times.

Note

Be sure to return the tab to the home position (▲) (1). If you do not, printed pages may have a vertical stripe.

- 5 Put the drum unit and toner cartridge assembly back into the machine.

- 6 Close the front cover of the machine.

Cleaning the drum unit

If your printout has dots at 94 mm intervals, the drum may have foreign material, such as glue from a label stuck on the drum surface. Follow the steps below to solve the problem.

- 1 Make sure that the machine is in the Ready mode.
Press **Menu**, **6**, **6**, then press **Start** to print the drum dot check sheet.

- 9 Turn the drum unit gear toward you by hand while checking the surface of the suspected area.

- 10 When you have found the mark on the drum that matches the drum dot check sheet, wipe the surface of the drum gently with a cotton swab until the mark on the surface comes off.

Important

DO NOT clean the surface of the photosensitive drum with a sharp object or any liquids.

- 11 Turn the drum unit back over.

- 12 Put the toner cartridge back into the drum unit until you hear it lock into place. If you put the cartridge in correctly, the green lock lever on the drum unit will lift automatically.
