Syntax

<code>GAP m,n</code>	in inches
<code>GAP m mm,n mm</code>	in mm
<code>GAP m dot,n dot</code>	in dots

Parameter	Description
M	The gap distance between two labels $0 \leq m \leq 1$ (inch), $0 \leq m \leq 25.4$ (mm) $0 \leq m \leq 5$ (inch), $0 \leq m \leq 127$ (mm)
N	The offset distance of the gap $n \leq \text{label length}$ (inch or mm)

5.3 GAPDETECT

Description

Feed the paper through the gap sensor to determine the paper and gap sizes respectively. This command references the user's approximate measurements. If the measurements conflict with the actual size, the **GAPDETECT** command will not work properly. This calibration method can be applied to the labels with pre-printed logos or texts.

Syntax

`GAPDETECT [x,y]`

<u>Parameter</u>	<u>Description</u>
X	Paper length (in dots)
Y	Gap length (in dots)
Note: If the x, y parameters are ignored then the printer will calibrate and determine the paper length and gap size automatically.	

See Also

GAP, SIZE, BLINEDetect, AUTODETECT

5.4 BLINEDTECT

Description

Feed the paper through the black mark sensor to determine the paper and black mark sizes respectively. This command references the user's approximate measurements. If the measurements conflict with the actual size, the **BLINEDTECT** command will not work properly. This calibration method can be applied to the labels with pre-printed logos or texts.

Syntax

`BLINEDTECT [x,y]`

<u>Parameter</u>	<u>Description</u>
x	Paper length (in dots)
y	Gap length (in dots)

Note:

If the x, y parameters are ignored then the printer will calibrate and determine the paper length and gap size automatically.

See Also

GAP, SIZE, GAPDETECT, AUTODETECT

5.5 AUTODETECT

Description

Feed the paper through the gap/black mark sensor to determine the paper and gap/black mark sizes, respectively. This command references the user's approximate measurements. If the measurements conflict with the actual size, the **AUTODETECT** command will not work properly. This calibration method can be applied to the labels with pre-printed logos or texts.

Syntax

`AUTODETECT [x,y]`

<u>Parameter</u>	<u>Description</u>
x	Paper length (in dots)
y	Gap length (in dots)
Note: <ul style="list-style-type: none">▪ If the x, y parameters are ignored then the printer will calibrate and determine the paper length and gap/black mark size automatically.▪ The printer will detect the label by the proper sensor type. When using this command, make sure GAP or BLINE command are not used in your program.

<code>BLINE m dot,n dot</code>	in dots

Parameter	Description
m	The height of black line either in inch or mm $0 \leq m \leq 1$ (inch), $0 \leq m \leq 25.4$ (mm) $0 \leq m \leq 5$ (inch), $0 \leq m \leq 127$ (mm)
n	The extra label feeding length $0 \leq n \leq \text{label length}$
0,0	Continuous label

Note:

- For metric system, make sure you add a space between parameter and mm.
- When the sensor type is changed from "GAP" to "Black Mark", make sure you send the **GAP** command to the printer first.

11.11 SET GAP

Description

Adjust the gap sensor emission sensitivity. The printer initiates automatic gap sensor calibration when the **PAUSE** key is held down while powering up. Use this setting when auto calibration does not work because the thickness of the backing paper and that of the label with backing paper are not within the sensor's detection range or there are pre-printed marks or patterns on the label. This setting will be saved in the printer memory when turning off the power.

Syntax

SET GAP n/AUTO/OFF/0,/REVERSE/OBVERSE

Parameter	Description
N	Gap sensor light emission strength. Available range is listed as below. 0 is the lowest sensitivity.
AUTO	Feed 2 or 3 labels to calibrate the gap. If the label is continuous, the printer will feed label to limit 10~20 inches to confirm if the label is continuous.
OFF	Disable the SET GAP AUTO function.
0,	Automatically calibrate the gap size.
REVERSE	This function is used when the black mark, the separation between labels, can't be detected by the black mark sensor. The parts of the media which can be passed through by the gap sensor are defined to be the printable area, otherwise it will be defined to the gap of the media.
OBVERSE	Disable the SET GAP REVERSE function.

Printer model	Gap Sensor Range	Black Mark Sensor Range	SET GAP REVERSE SET GAP OBVERSE SET GAP AUTO
TD-4420TN/4520TN	0~15	0~3	V

TJ-4420TN / TJ-4520TN / TJ-4620TN / TJ-4422TN / TJ-4522TN	0~15	0~3	V

Note:

In the **SET HEAD OFF** mode, the **SET GAP AUTO** command will work not when you open and close the printer head but when you power on the printer.

Example

The example below is operated in DOS environment via the parallel port connection to set up the label size, gap distance and sensor sensitivity.

```
C:\>COPY CON LPT1<ENTER>
SIZE 4,2.5<ENTER>
GAP 0.12,0<ENTER>
SET GAP 1<ENTER>
<CTRL><Z><ENTER>
C:\>
```

Note:

<ENTER> stands for keyboard **ENTER** key. In the above example, press **ENTER** key instead of typing <ENTER> in the above example. <CTRL> stands for keyboard **Ctrl** key.

Troubleshooting:

Press the **FEED** key to test. Does the printer stop at the same position on each label without the error light blinking? If not, adjust the setting to a larger number. When adjusting this setting, begin from 0 and then on to higher values-incrementally.

Example

Sample code (1)

```
CLS
RFID WRITE,0,H,0,12,EPC,"123456789012"
RFID READ,0,H,0,12,EPC,"Read Data: "
PRINT 1
```

Sample code (2)

This programming example writes a data with lock password into an RFID tag and reads the written data with a prompt.

```
CLS
RFID WRITE,1234,H,0,8,EPC,"20191008"
RFID READ,0,H,0,8,EPC,"Date: "
PRINT 1
```

Note:

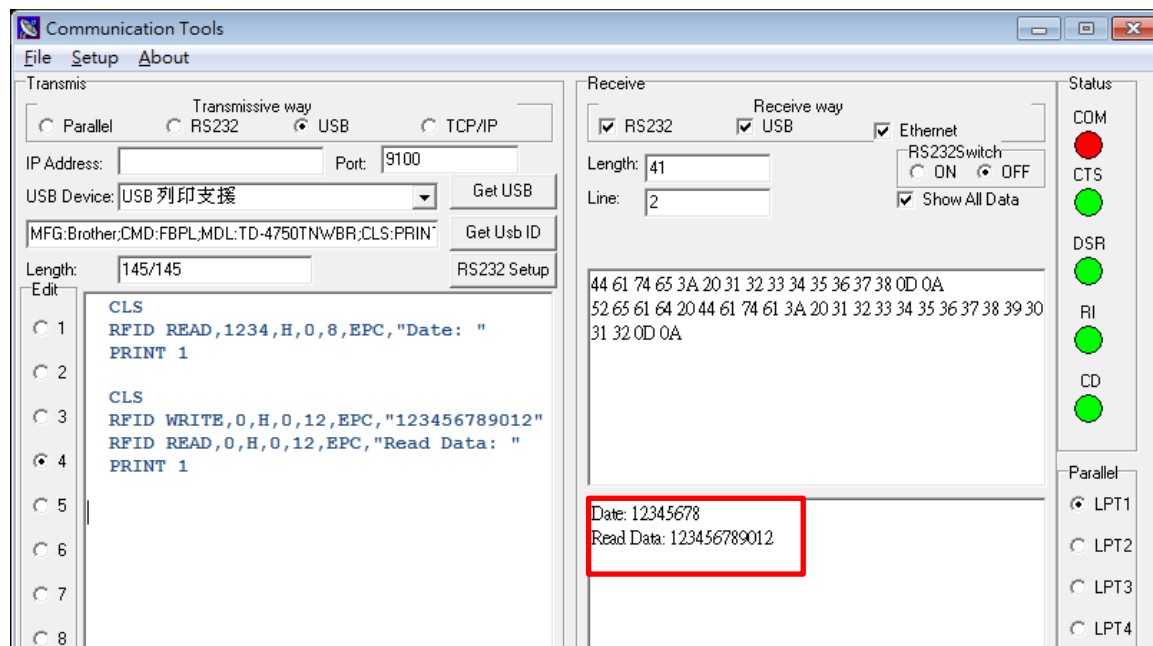

For this locked RFID tag, it cannot be overwritten data without using **RFID READ** unlock password command. If you re-send the **RFID WRITE** command, the printer LCD will be shown as below,

To overwrite this locked tag, use **RFID READ** unlock command as following programming example, to unlock password for the RFID tag so it can be overwritten later.

```
CLS
RFID READ,1234,H,0,8,EPC,"Date: "
PRINT 1

CLS
RFID WRITE,0,H,0,12,EPC,"123456789012"
RFID READ,0,H,0,12,EPC,"Read Data: "
PRINT 1
```

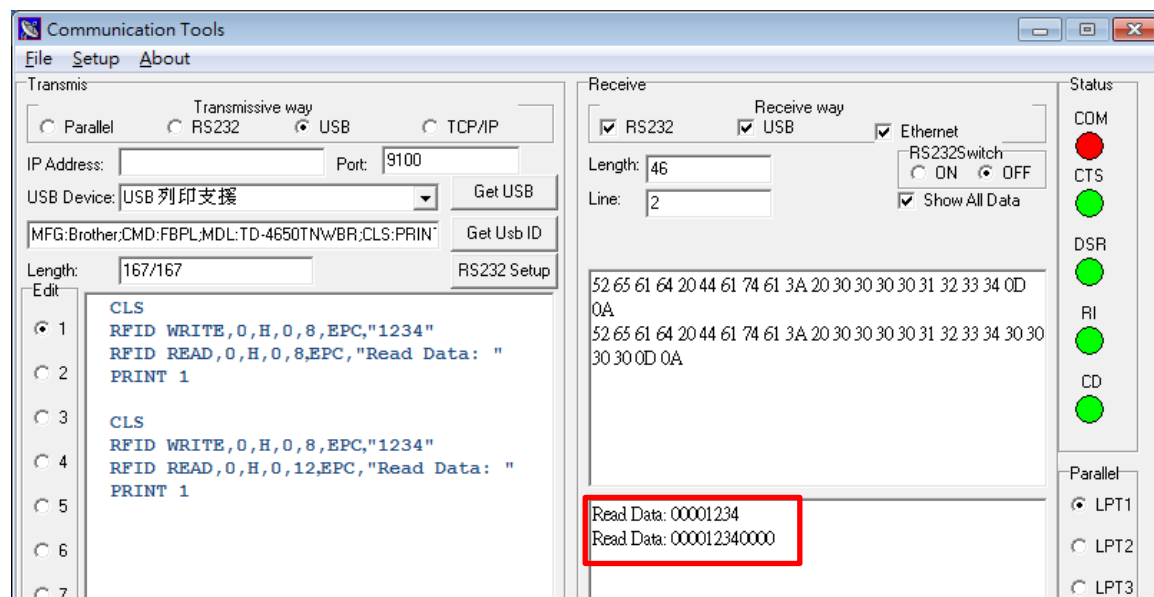

Sample code (3)

When using **WRITE**, if the "size" is larger than the "data", it will be padded with 0 in front of the data to read. When using **READ**, if the "size" is larger than the **WRITE** "data", it will be padded with 0 in back of the data to read.

```
CLS
RFID WRITE,0,H,0,8,EPC,"1234"
RFID READ,0,H,0,8,EPC,"Read Data: "
PRINT 1
```

```
CLS
RFID WRITE,0,H,0,8,EPC,"1234"
RFID READ,0,H,0,12,EPC,"Read Data: "
PRINT 1
```

18 General purpose input output (GPIO) Setting Commands

18.1 Before Using GPIO

Internal and External Mode (JP2)

- The default setting is the internal mode. To use the external mode, contact your sales representative before your purchase.
- The voltage level of Pin 2 should be limited to +5V-28V in the external mode to prevent damage to the PCB.

Internal Mode (Default)

IO power is set to 5V.

External Mode

IO power is set to the voltage level you input to Pin 2.

- Make sure you have installed the correct firmware version to use the GPIO function. Use **SET GPO** command and **SET GPI** command to control the GPIO.

Model	Firmware Version
TJ-4420TN/4520TN/4620TN/4422TN/4522TN	B1.17.S54 or later

Note:

- Photocouplers: PC357N1TJ000F (PC817) / SMD [IC], PC357NT(PC817) / SMD [IC]
All have the same specifications.
- For more information about IO_power, see the **Internal and External Mode (JP2)**.

GPIO Pin Definition

Pin	Configuration	Signal Type
1	GND	I/O Signal Ground
2	5V(JP2 short)	Power
3	GPI_1	Input
4	GPI_2	Input
5	GPI_3	Input
6	GPI_4	Input
7	24V	Power
8	GND	Power Ground
9	GPO_1	Output
10	GPO_2	Output
11	GPO_3	Output
12	GPO_4	Output
13	GPO_5	Output
14	GPO_6	Output
15	GPO_7	Output

Note:

- **DO NOT** input any signal or voltage to Pin 7 to prevent the damage to the PCB. Pin 7 always outputs 24V as a reference voltage level. For normal operation, we do not recommend using Pin 7.
- In the internal mode, **DO NOT** apply any voltage to Pin 2 to prevent the damage to the PCB.
- In the external mode, apply the voltage **+5V-28V** to Pin 2. IO_power voltage is used as input voltage level.

Appendix B: Download your Fonts

- To use the built-in fonts, select the font name from the list of the **TEXT** command.
- To use the downloaded fonts, download your fonts to the printer using the Brother Printer Management Tool (BPM):
 1. Connect your computer and the printer, and then turn on the printer.
 2. Start the BPM and click the **File Manager**.
 3. Click **Browse** to select the font file.
 4. Select **FLASH** from the **Memory Device** drop-down list.
 5. Click **Download** to start downloading the file.

- Make sure the file name and its extension are in uppercase letters. (Example: ~~ipaexg.ttf~~ → IPAEXG.TTF)
- The BPM is a Windows tool and it does not support the Bluetooth® connection. When using the BPM, connect the printer to your computer via USB or Wi-Fi®.
