Convention	Description
[expression list]	Items inside square brackets are optional, expression maximum length 2*1024 bytes.
<ESC>	ASCII 27, control code of status polling command returns/runs the printer status immediately.
~	ASCII 126, control code of status polling command returns the printer status only when the printer is ready.
Space	ASCII 32, characters will be ignored in the command line.
"	ASCII 34, beginning and ending of expression.
CR, LF	ASCII 13, ASCII 10, denotes end of command line.
NULL	ASCII 0, supported in the expression.
<b>Note:</b> 203 dpi: 1 mm = 8 dots	Note

### 3 Object Position Calculation

```
DIRECTION 0
CLS
TEXT 56,24,"3",0,1,1,"ABC"
PRINT 1
```

```
DIRECTION 1
CLS
TEXT 56,24,"3",0,1,1,"ABC"
PRINT 1
```

**Note :**

1. 203 dpi, 1 mm=8 dots ; 300 dpi, 1 mm=12 dots ; 600 dpi, 1mm=24 dots
2. Only integer portion will be used. Ex. 2 mm = 23.6 dots then 23 dots will be used.

Define the gap distance between two labels.

### Syntax

GAP m,n	in inches
GAP m mm,n mm	in mm
GAP m dot,n dot	in dots

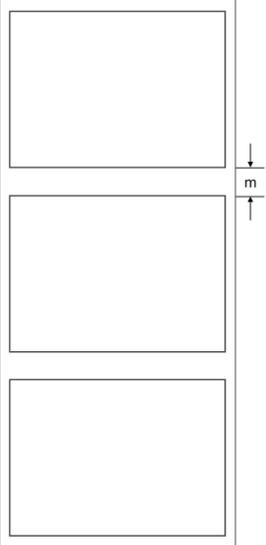

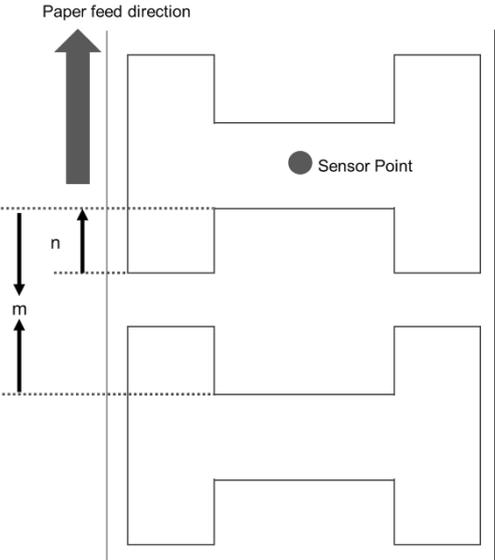

Parameter	Description
M	The gap distance between two labels $0 \leq m \leq 1$ (inch), $0 \leq m \leq 25.4$ (mm) $0 \leq m \leq 5$ (inch), $0 \leq m \leq 127$ (mm)
N	The offset distance of the gap $n \leq \text{label length}$ (inch or mm)
0, 0	Continuous label

**Note :**

- 203 dpi : 1 mm = 8 dots
- 300 dpi : 1 mm = 12 dots
- 600 dpi : 1 mm = 24 dots
- For metric and dot systems, make sure you add a space between parameter and mm/dot.
- When the sensor type is changed from "Black Mark" to "GAP", make sure you send the **GAP** command to the printer first.

## Example

Sample Code	Result
<p><b>Normal gap</b></p> <p>In inches: GAP 0.12, 0</p> <p>In mm: GAP 3 mm, 0 mm</p> <p>Continuous label: GAP 0, 0</p>	<p><b>Normal gap</b></p>  <p>The diagram shows three identical rectangular labels stacked vertically. A vertical dimension line on the right side indicates the gap between the bottom of one label and the top of the next, labeled with the letter 'm'.</p>
<p><b>Special gap</b></p> <p>In inches GAP 0.30, 0.10</p> <p>In mm GAP 7.62 mm, 2.54 mm</p>	<p><b>Special gap</b></p>  <p>The diagram shows a continuous label with a complex, stepped profile. An arrow labeled "Paper feed direction" points upwards. A "Sensor Point" is marked with a black dot on the label. Two horizontal dashed lines are drawn across the label, with vertical dimension lines indicating the distance between them. The distance between the top dashed line and the top edge of the label is labeled 'n'. The distance between the two dashed lines is labeled 'm'.</p>

## 5.3 GAPDETECT

### Description

Feed the paper through the gap sensor to determine the paper and gap sizes respectively. This command references the user's approximate measurements. If the measurements conflict with the actual size, the **GAPDETECT** command will not work properly. This calibration method can be applied to the labels with pre-printed logos or texts.

### Syntax

GAPDETECT [x,y]

<u>Parameter</u>	<u>Description</u>
X	Paper length (in dots)
Y	Gap length (in dots)

**Note:**

If the x, y parameters are ignored then the printer will calibrate and determine the paper length and gap size automatically.

### See Also

GAP, SIZE, BLINEDTECT, AUTODETECT

## 5.4 BLINEDETECT

### Description

Feed the paper through the black mark sensor to determine the paper and black mark sizes respectively. This command references the user's approximate measurements. If the measurements conflict with the actual size, the **BLINEDETECT** command will not work properly. This calibration method can be applied to the labels with pre-printed logos or texts.

### Syntax

`BLINEDETECT [x,y]`

<u>Parameter</u>	<u>Description</u>
x	Paper length (in dots)
y	Gap length (in dots)

**Note:**

If the x, y parameters are ignored then the printer will calibrate and determine the paper length and gap size automatically.

### See Also

GAP, SIZE, GAPDETECT, AUTODETECT

## 5.5 AUTODETECT

### Description

Feed the paper through the gap/black mark sensor to determine the paper and gap/black mark sizes, respectively. This command references the user's approximate measurements. If the measurements conflict with the actual size, the **AUTODETECT** command will not work properly. This calibration method can be applied to the labels with pre-printed logos or texts.

### Syntax

`AUTODETECT [x, y]`

<u>Parameter</u>	<u>Description</u>
x	Paper length (in dots)
y	Gap length (in dots)

**Note:**

- If the x, y parameters are ignored then the printer will calibrate and determine the paper length and gap/black mark size automatically.
- The printer will detect the label by the proper sensor type. When using this command, make sure **GAP** or **BLINE** command are not used in your program.

### See Also

GAP, SIZE, GAPDETECT, BLINEDETECT

## 5.6 BLINE

### Description

Set the height of the black line and the user-defined extra label feeding length each form feed takes.

### Syntax

BLINE m,n	in inches
BLINE m mm,n mm	in mm
BLINE m dot,n dot	in dots

Parameter	Description
m	The height of black line either in inch or mm $0 \leq m \leq 1$ (inch), $0 \leq m \leq 25.4$ (mm) $0 \leq m \leq 5$ (inch), $0 \leq m \leq 127$ (mm)
n	The extra label feeding length $0 \leq n \leq \text{label length}$
0,0	Continuous label

**Note:**

- For metric system, make sure you add a space between parameter and mm.
- When the sensor type is changed from "GAP" to "Black Mark", make sure you send the **GAP** command to the printer first.
- 203 dpi : 1 mm = 8 dots  
 300 dpi : 1 mm = 12 dots  
 600 dpi : 1 mm = 24 dots

### Example

## 5.7 OFFSET

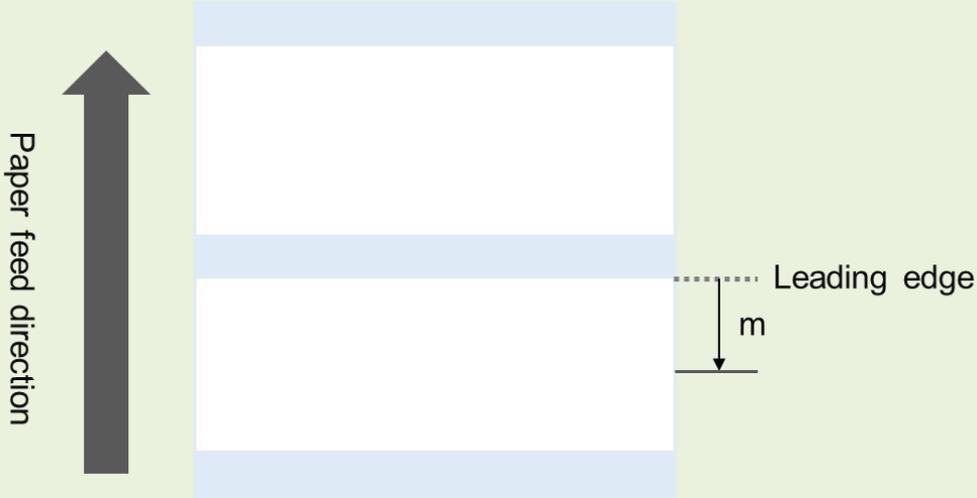

### Description

Fine-tune the media stop location especially in the peel-off mode and cutter mode. The printer backfeeds the label before printing the next job.

### Syntax

OFFSET m	In inches
OFFSET m mm	In mm
OFFSET m dot	In dots

<u>Parameter</u>	<u>Description</u>
m	The offset distance (inch or mm) $-1 \leq m \leq 1$ (inch)

**Note:**

- If the offset value is incorrect, it may create a paper jam.
- For metric system, make sure you add a space between parameter and mm.
- 203 dpi : 1 mm = 8 dots  
300 dpi : 1 mm = 12 dots  
600 dpi : 1 mm = 24 dots

### Example

**Sample code**  
This example uses the Brother CommTool to test ~!F.

The screenshot shows the Brother CommTool interface. In the 'Transmit' section, the 'USB' option is selected, and the command '~!F' is entered in the text area. The 'Receive' section shows the received data in hexadecimal: '54 45 53 54 2E 42 41 53 0D 1A'. Below this, the file name 'TEST.BAS' is displayed. The interface also includes a 'Status' panel with indicators for COM, CTS, DSR, RI, and CD, and a 'Parallel' section with LPT1-LPT4 options.

The total numbers of nested IF ...THEN ...ELSE statement in a program cannot exceed 40.

The total numbers of nested IF ...THEN ...ELSE, FOR...NEXT, GOSUB RETURN in a program cannot exceed 40 loops.

## 11.11 SET GAP/SET BLINE

### Description

Use these commands to adjust the gap sensor and blackmark sensor emission sensitivity. The printer initiates automatic sensor calibration when the **PAUSE** key is pressed and held while turning the printer on. Use the **SET GAP** and **SET BLINE** commands if the automatic calibration does not work because the thickness of the backing paper and that of the label with backing paper are not within the sensor's detection range or there is pre-printed text or images on the label. The gap sensor and blackmark sensor sensitivity settings will be saved in the printer's memory when the printer is turned off.

### Syntax

SET GAP n/AUTO/OFF/0,/REVERSE/OBVERSE  
 SET BLINE n

<u>Parameter</u>	<u>Description</u>		
n	Gap sensor/Blackmark sensor light emission strength. Available range is listed as below. 0 is the lowest sensitivity.		
AUTO	Feed 2 or 3 labels to calibrate the gap. If the label is continuous, the printer will feed label to limit 10~20 inches to confirm if the label is continuous.		
OFF	Disable the <b>SET GAP AUTO</b> function.		
0, REVERSE	Automatically calibrate the gap size. This function is used when the black mark, the separation between labels, can't be detected by the black mark sensor. The parts of the media which can be passed through by the gap sensor are defined to be the printable area, otherwise it will be defined to the gap of the media.		
OBVERSE	Disable the <b>SET GAP REVERSE</b> function.		

Printer model	Gap Sensor Range	Black Mark Sensor Range	SET GAP REVERSE SET GAP OBVERSE SET GAP AUTO
TD-4420TN/4520TN	0~15	0~3	<b>V</b>
TD-4650TNWB / TD-4650TNWBR, TD-4750TNWB / TD-4750TNWBR	0~15	0~3	<b>V</b>
RJ-2035B / RJ-2055WB RJ-3035B / RJ-3055WB	0~7	0~7	<b>V</b>
TJ-4005DN / TJ-4010TN / TJ-4020TN / TJ-4021TN / TJ-4021TNR / TJ-4120TN / TJ-4121TN / TJ-4121TNR	0~15	0~3	<b>V</b>
TJ-4420TN / TJ-4520TN / TJ-4620TN / TJ-4422TN / TJ-4522TN	0~15	0~15	<b>V</b>

**Note:**  
 Only parameter **n** is available for the **SET BLINE** command.  
 In the **SET HEAD OFF** mode, the **SET GAP AUTO** command will work not when you open and close the printer head but when you power on the printer.

## Example

The example below is operated in DOS environment via the parallel port connection to set up the label size, gap distance and sensor sensitivity.

```
C:\>COPY CON LPT1<ENTER>
SIZE 4,2.5<ENTER>
GAP 0.12,0<ENTER>
SET GAP 1<ENTER>
<CTRL><Z><ENTER>
C:\>
```

### Note:

<ENTER> stands for keyboard **ENTER** key. In the above example, press **ENTER** key instead of typing <ENTER> in the above example. <CTRL> stands for keyboard **Ctrl** key.

### Troubleshooting:

Press the **FEED** key to test. Does the printer stop at the same position on each label without the error light blinking? If not, adjust the setting to a larger number. When adjusting this setting, begin from 0 and then on to higher values-incrementally.

RFID READ,0,H,0,8,EPC,"Date: "
PRINT 1
```

### Note:

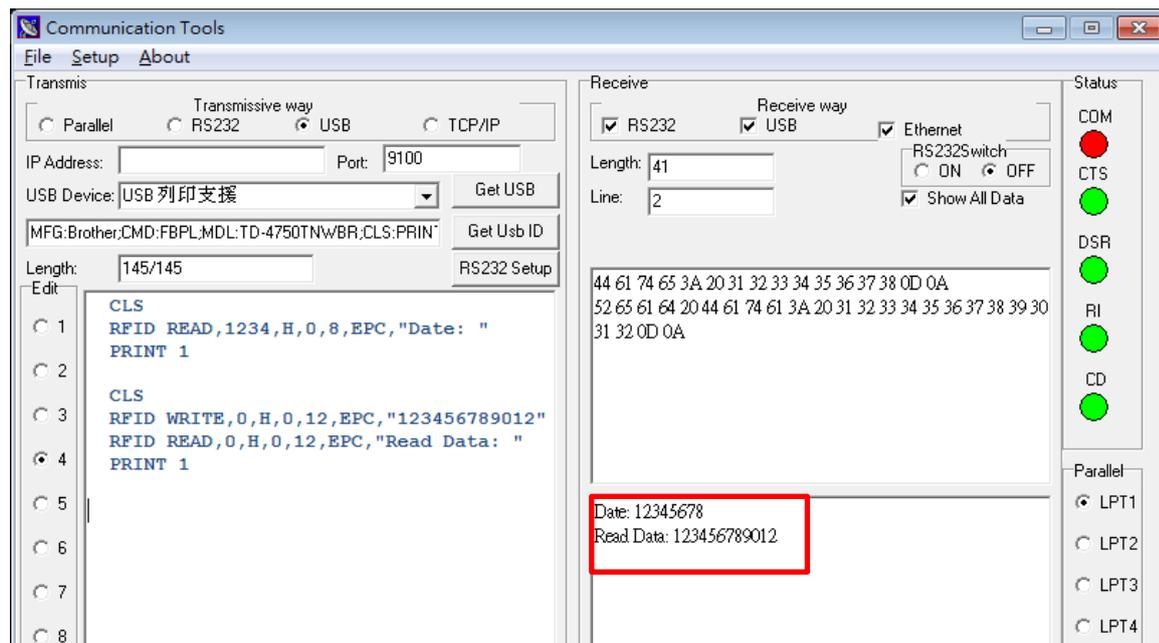

For this locked RFID tag, it cannot be overwritten data without using **RFID READ** unlock password command. If you re-send the **RFID WRITE** command, the printer LCD will be shown as below,

To overwrite this locked tag, use **RFID READ** unlock command as following programming example, to unlock password for the RFID tag so it can be overwritten later.

```
CLS
RFID READ,1234,H,0,8,EPC,"Date: "
PRINT 1
```

```
CLS
RFID WRITE,0,H,0,12,EPC,"123456789012"
RFID READ,0,H,0,12,EPC,"Read Data: "
PRINT 1
```

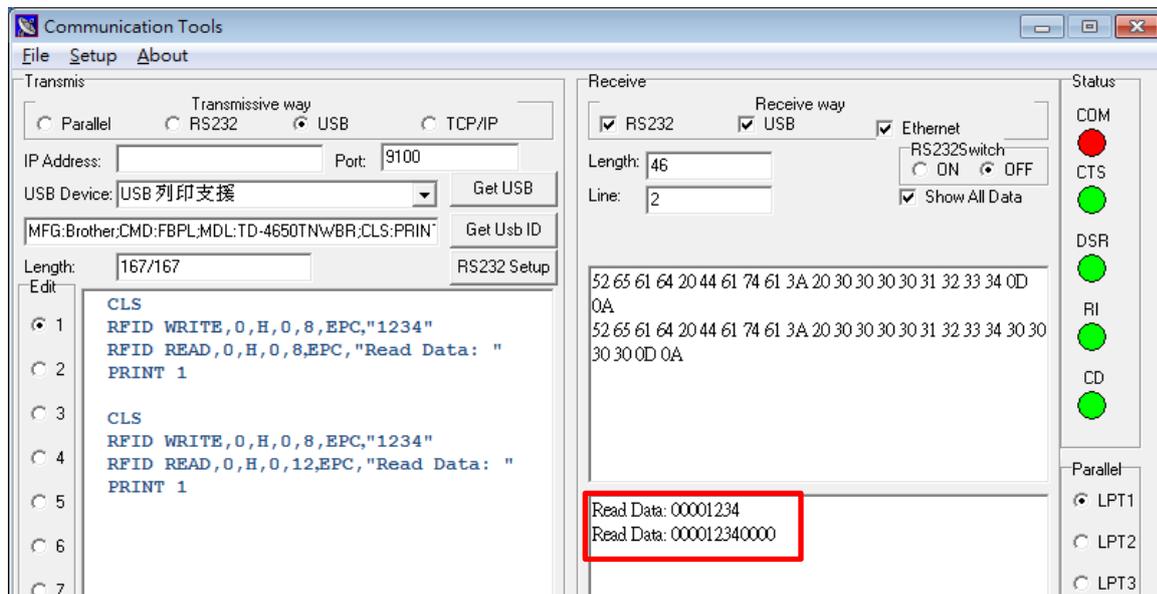

### Sample code (3)

When using **WRITE**, if the "size" is larger than the "data", it will be padded with 0 in front of the data to read. When using **READ**, if the "size" is larger than the **WRITE** "data", it will be padded with 0 in back of the data to read.

```
CLS
RFID WRITE,0,H,0,8,EPC,"1234"
RFID READ,0,H,0,8,EPC,"Read Data: "
PRINT 1
```

```
CLS
RFID WRITE,0,H,0,8,EPC,"1234"
RFID READ,0,H,0,12,EPC,"Read Data: "
PRINT 1
```

### Sample code (4)

This programming example changes PC (Protocol Control) bits.

#### Note:

Make sure you use the correct firmware version to set the PC bits.

Model	Firmware Version
TD-4650TNWBR / TD-4750TNWBR	V1.04.S21 or later
TJ-4021TNR / TJ-4121TNR	B2.12.S27 or later

```
CLS
RFID WRITE,0,H,0,4,PC,"15A3"
RFID WRITE,0,H,0,8,EPC,"12345678"
RFID WRITE,0,H,0,4,USR,"FE00"
RFID READ,0,H,0,4,PC,"PC: "
RFID READ,0,H,0,8,EPC,"EPC: "
RFID READ,0,H,0,4,USR,"USR: "
PRINT 1
```

The screenshot shows the Brother CommTool application window. The 'Transmit' tab is active, displaying the sample code from the previous block. The 'Receive' tab is also visible, showing a hex dump of the received data. The hex dump is as follows:

```
50 43 3A 20 31 35 41 33 0D 0A
45 50 43 3A 20 31 32 33 34 35 36 37 38
0D 0A
55 53 52 3A 20 46 45 30 30 0D 0A
```

Below the hex dump, the received data is displayed in a text box, with the following lines highlighted in a red box:

```
PC: 15A3
EPC: 12345678
USR: FE00
```

The 'Status' panel on the right shows the COM port status (green), CTS (green), DSR (green), RI (green), and CD (green). The 'Parallel' section shows LPT1 selected. The 'Hex' section shows the hex data '15A3', '12345678', and 'FE00'.

### **Sample code (5)**

This example shows how to apply a permanent lock.

```
CLS  
RFID WRITE,P12345678,H,0,8,EPC,"11111111"  
PRINT 1
```

**Note:**

Permanent lock for EPC memory is available on these models:

- TD-4650TNWBR, TD-4750TNWBR: firmware version V1.04 S116 or later
- TJ-4021TNR, TJ-4121TNR: firmware version B2.12.S112 or later

# 18 General purpose input output (GPIO) Setting Commands

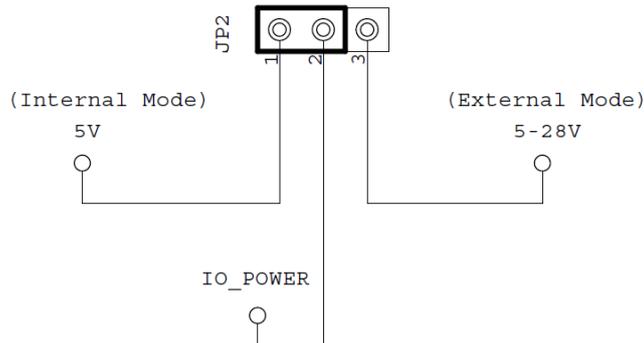

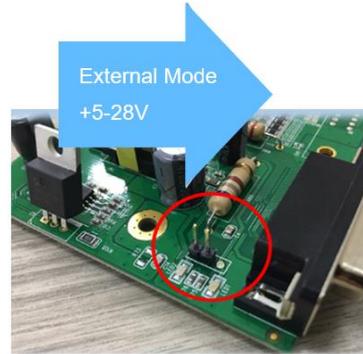

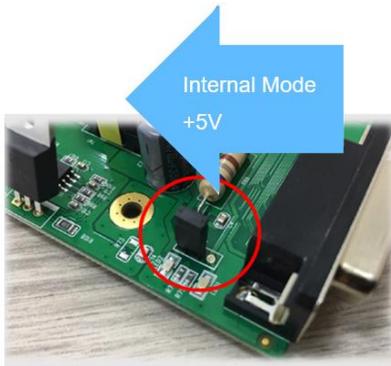

## 18.1 Before Using GPIO

### Internal and External Mode (JP2)

- The default setting is the internal mode. To use the external mode, contact your sales representative before your purchase.
- The voltage level of Pin 2 should be limited to +5V-28V in the external mode to prevent damage to the PCB.

**Internal Mode (Default)**  
IO power is set to 5V.

**External Mode**  
IO power is set to the voltage level you input to Pin 2.

- Make sure you have installed the correct firmware version to use the GPIO function. Use **SET GPO** command and **SET GPI** command to control the GPIO.

Model	Firmware Version
TJ-4420TN/4520TN/4620TN/4422TN/4522TN	B1.17.S54 or later
TJ-4020TN/4021TN/4021TNR/4120TN/4121TN/4121TNR	B2.12.S47 or later

## 18.4 GPIO Application Note

### Circuit Diagram

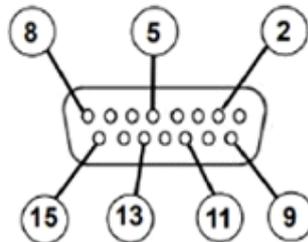

#### Note:

- Photocouplers: PC357N1TJ000F (PC817) / SMD [IC], PC357NT(PC817) / SMD [IC]  
All have the same specifications.
- For more information about IO\_power, see the **Internal and External Mode (JP2)**.

## GPIO Pin Definition

Pin	Configuration	Signal Type
1	GND	I/O Signal Ground
2	5V(JP2 short)	Power
3	GPI 1	Input
4	GPI 2	Input
5	GPI 3	Input
6	GPI 4	Input
7	24V	Power
8	GND	Power Ground
9	GPO 1	Output
10	GPO 2	Output
11	GPO 3	Output
12	GPO 4	Output
13	GPO 5	Output
14	GPO 6	Output
15	GPO 7	Output

### Note:

- **DO NOT** input any signal or voltage to Pin 7 to prevent the damage to the PCB. Pin 7 always outputs 24V as a reference voltage level. For normal operation, we do not recommend using Pin 7.
- In the internal mode, **DO NOT** apply any voltage to Pin 2 to prevent the damage to the PCB.
- In the external mode, apply the voltage **+5V-28V** to Pin 2. IO\_power voltage is used as input voltage level.

## Appendix B: Download your Fonts

- To use the built-in fonts, select the font name from the list of the **TEXT** command.
- To use the downloaded fonts, download your fonts to the printer using the Brother Printer Management Tool (BPM):
  1. Connect your computer and the printer, and then turn on the printer.
  2. Start the BPM and click the **File Manager**.
  3. Click **Browse** to select the font file.
  4. Select **FLASH** from the **Memory Device** drop-down list.
  5. Click **Download** to start downloading the file.

- 
- Make sure the file name and its extension are in uppercase letters. (Example: ~~ipaexg.ttf~~ → IPAEXG.TTF)
  - The BPM is a Windows tool and it does not support the Bluetooth® connection. When using the BPM, connect the printer to your computer via USB or Wi-Fi®.
